

**A tornado has the power to take out everything in its path. Almost everything.**

*"Paladin" is a medieval term for a hero or knightly champion. Today, Paladin takes on new meaning as a severe weather door system.*

**Introducing the Paladin™ Severe Weather Door System from Steelcraft.**

The Paladin Door System was designed to withstand some of the most destructive forces of nature. During tests conducted at Texas Tech University's Wind Engineering Research Center, Paladin stood its ground against 15-lb. debris missiles traveling at a speed of 100 mph. And it didn't buckle under wind-load pressure in excess of 1.75 psi. The Paladin Door System exceeded the criteria for FEMA 361 commercial and 320 residential storm shelter compliance, proving itself a real life preserver in the event of a weather emergency. For a truly safe shelter, spec the Paladin Door System. For details, call 800.930.8585 or visit [www.steelcraft.com](http://www.steelcraft.com).
