General Information • Introduction

Introduction

After more than seven decades of quality, craftsmanship and service leadership, Steelcraft continues to be recognized as the world's leading manufacturer of steel doors and frames. Steelcraft manufactures the most complete line of steel doors and frames. These products are produced from the highest quality of commercial carbon steel or galvannealed steel as specified.

Steelcraft frames are designed for virtually all types of wall construction. The flush frame is primarily intended for installation as part of the wall framing system(s), while the Drywall Frames are specifically designed for drywall construction.

Steelcraft also offers the broadest line of labeled (Fire Rated) doors and frames for either Positive or Neutral fire test environments. Steelcraft continues to be very active in assisting building code officials in the adoption of more stringent and realistic codes for Fire Doors and Frames.

The Steelcraft Architectural Stick System consists of standard frame components that are pre-engineered for assembly and fabrication by the local Steelcraft distributor. This allows for unlimited opportunities to meet the architectural and aesthetic needs of extensive window wall, store front and entrance units.

Steelcraft is devoted to the manufacture, service and continuous improvement of steel doors, frames and their components. A measure of this commitment can be found in the great number of door and frame innovations that are now common in the industry-pioneered, designed, developed, and in certain products, patented by Steelcraft.

This Technical Manual is designed to provide Architects, Engineers, Specification Writers, End Users and Distributors with the necessary information to specify the correct Steelcraft product to meet the application and functional needs of the project. In addition to providing the industry with the highest quality of steel doors, frames and components, Steelcraft offers the widest selection of sizes, styles and designs to compliment virtually any architectural, aesthetic, security or safety requirement.

Steelcraft products are SDI Certified (www.steeldoor.org/sdicertified.php).

Steelcraft is a long-standing and very involved member of several training and industry organizations, which are also dedicated to the continual improvement of the Commercial Door and Frame Markets. Some of the major trade associations of which Steelcraft is an active member include:

SDI: Steel Door Institute
HMMA: Hollow Metal Manufacturers' Association
DHI: The Door and Hardware Institute

Steelcraft Metric Policy

Jobs ordered in metric dimensions will be supplied to the actual dimensions indicated on orders placed to Steelcraft. No dimensions will be considered nominal, unless they are clearly indicated and supported by a clearly stated metric dimensional standard. All critical, installation and functional tolerances will be in accordance with the industry tolerance published in and by the Steel Door Institute (SDI) and the Hollow Metal Manufacturers Association (HMMA).

Errors and omissions

Every effort has been made to ensure the accuracy and completeness of this Steelcraft Technical Manual. This manual is for use by qualified persons only. The information herein is subject to some interpretation, and from time to time, the data sheets will be updated whenever it is deemed necessary as new tests are conducted, new products and technologies are introduced and as specifications are revised.

Similarly, there may be recommendations provided in this manual concerning hardware or construction procedures. Specific hardware, code, and specific industry standards and instructions should always be followed. Any differences should be fully understood by the architect and contractors. For these reasons, and because of the nature and scope of the subject, Steelcraft and its employees can assume no responsibility or liability for the absolute accuracy of the material contained herein or its use. The information in this Technical Manual is subject to change without notice and does not represent a commitment on the part of Steelcraft.

Please contact the Steelcraft Technical Service Department if you identify an error or omissions.

<td>Testing and Rating of Severe Windstorm Resistant Components for Swinging Door Assemblies</td>
<td>This standard provides procedures for testing and establishing load ratings (design load in pounds per square foot or pounds force) for components of exterior swinging door assemblies. It is the intent of this document to test the protection of openings during severe windstorm conditions, such as a hurricane, that produces sustained wind speeds or gusts in a range of 110 to 150 miles per hour as defined by ASCE 7-02. It is not intended to simulate wind forces generated by tornadoes.</td>
</tr>
</tbody>
</table>
Handing procedures diagrams

To determine the hand of a door, view the door from the outside (the side that hinges are on is the hand of the door).

- If the door swings away from the viewer, the hand is regular hand, i.e., right or left hand.
- If the door swings to the viewer, the door is reverse swing, i.e., right hand reverse swing or left hand reverse swing.
- For door handing in Tornado shelter door openings, the outside is always the storm side. While uncommon, if the key side is on the safe side of the door, as in a corridor shelter, this handing rule still applies. In this case, you must clarify in your order so that latching hardware preps will be correctly addressed, and the keyside will be recognized on the reverse hand (inside) as instructed.
- Storm Shutter doors likewise are handed with the outside as the storm side. Shutters are typically straight handed and will always be straight handed if there is glass in the opening.

All Steelcraft Doors and Frames are handed according to the following chart:

<table>

K indicates key side of the active door.
**Frame nomenclature**

Steelcraft frames are described and marked with easy to follow product identification nomenclature. The markings identify the frames by frame series, gauge (decimal and metric), fire rating, door thickness, overall depth, door opening height/width, hardware preps, component and handing.

The following is a brief guide to the nomenclature used by Steelcraft: **F 16 UL 4 5 3/4 70 SJ R ASA**

**Notes:**
1. The nomenclature designation shown on this page is for education, example and reference only.
2. Refer to the individual Technical Data Manual sheets to develop options related to the specific frame series.
3. Refer to the hardware section of this manual for preps and nomenclature not covered on this sheet.

---

**STRIKE PREP**

- **ASA** = 4 7/8" (124 mm) Strike With Lip
- **CYL** = 2 3/4" (70 mm) Strike With Lip
- **RPD** = Rim Exit Device Reinf.
- **VPD** = Vertical Rod Exit Device Reinf.
- **SPCL** = Special Strike Application

**HANDING**

- **R** = Right Hand
- **L** = Left Hand
- **D** = Double Door
- **DR** = Double Door, Right Hand Active
- **DL** = Double Door, Left Hand Active

**COMPONENT**

- **SJ** = Strike Jamb
- **HJ** = Hinge Jamb
- **HD** = Head

**DOOR OPENING HEIGHT / WIDTH**

Designated In Feet and Inches
- **68** = 6’8” (2032 mm)
- **70** = 7’0” (2134 mm)
- **30** = 3’0” (914 mm)

**JAMB DEPTH**

- **5 3/4”** = In 1/4" (3 mm) Increments

**DOOR THICKNESS**

- **4** = 1 3/4" (45 mm)
- **8** = 1 3/8" (35 mm)
- **CO** = Cased Open Frame Profile

**FIRE RATING**

- **UL** = Underwriters Laboratories, Inc.
- **WH** = Warnock Hersey (Intertek ETL SEMKO)

**GAUGE OF STEEL**

- **16** = 16 gauge [0.053” (1.3 mm)]
- **14** = 14 gauge [0.067” (1.7 mm)]
- **12** = 12 gauge [0.093” (2.3 mm)]

**FRAME TYPE**

- **C / CK** = Casing-ready (no backbend)
- **DE** = Double Egress: 2 step jambs
- **DW** = Drywall (Adjustable Base Anchor)
- **F** = Flush 2” (51 mm) face
- **FE** = Double Egress: 3 step jambs
- **FN** = Flush 1” (25 mm) face
- **FP** = Paladin
- **FT** = Thermal Break
- **K** = Drywall (Screw Base Anchor)
- **MU** = Multiple Use 2” (51 mm) face
Door nomenclature
Steelcraft doors are described and marked with easy to follow product identification nomenclature. The markings identify the doors by door series, gauge (decimal and metric), fire rating, door thickness, width, height, glass design, hand and lock preps.

The following is a brief guide to the nomenclature used by Steelcraft: **L 18 UL 4 30 70 F R 61L**

### Notes:
1. The nomenclature designation shown on this page is for education, example and reference only.
2. Refer to the individual Technical Data Manual sheets to develop options related to the specific door series.
3. Refer to the hardware section of this manual for preps and nomenclature not covered on this sheet.
4. Refer to the lights and louvers section for additional information.
Typical hardware locations

</tbody>
</table>

**Notes**

1. 3 hinges (1 1/2 pair) are standard on 6’8”, 7’0”, 7’2”, and 7’6” openings.
2. **Steelcraft standard locations**: hardware preps (hinge and lock) with standard 3/4” undercut are located as illustrated above and as noted in Table 1.
3. **Special door undercuts**: hardware locations shown from the bottom of the door will be adjusted accordingly. Locations will be held from the top of the door.
4. **Special door heights**: special door heights are available. Dimension “A” will vary accordingly.
5. Refer to the Hardware section of this manual for all hardware locations and most prep details.
4 Hinges (2 Pair)

**Typical Frame Elevation**

**Typical Door Elevation**

**Notes**

1. 4 hinges (2 pair) are standard on openings over 7'6" in height and up to and including 10'0" in height.

2. **Steelcraft standard locations:** hardware preps (hinge and lock) with standard ¾" undercut are located as illustrated above and as noted in Table 2.

3. **Special door undercuts:** hardware locations shown from the bottom of the door will be adjusted accordingly. Locations will be held from the top of the door.

4. **Special door heights:** special door heights are available. Dimension “B” will vary accordingly.

5. Refer to the Hardware section of this manual for all hardware locations and most prep details.

**Typical Hardware Preps: Table 2**

Frames
General information

Steelcraft framing systems are designed to fit virtually all construction requirements for commercial and institutional building applications. Their construction, durability and flexibility have been proven throughout the world in both operation and physical testing of all types.

The F, FN, FE, DE, MU and C Series frames are designed for installation as part of the wall framing sequence, and installed in interior and exterior applications. When installed, this frame series will either wrap or butt up against the wall construction. Anchoring will be either into the masonry wall, or to the stud wall framing systems. Note C Series is for wrapping stud walls only.

The DW, K and CK Series frames are designed for interior application and for installation in rough openings after the wall is erected and finished. They can be installed in minutes and can be relocated without damage to the frame. When installed, this frame series will wrap the wall construction. Anchorage will be compression fit to the stud systems.

Sizes and performance

All framing systems are manufactured and supplied to meet the dimensional standards and performance levels as published in ANSI A250.8-2017 (SDI 100).

Special size products are available to meet the unique construction, performance and aesthetic requirements of the Architectural community. Contact Steelcraft for those requirements.

Usage and application

To help simplify the use, selection and specification of Steelcraft framing systems, the following guidelines for base material selection can be used:

Material gauge: the following material thicknesses are available:

- **16 gauge** [0.053” (1.3 mm)]: for Heavy Duty Commercial and Institutional applications with high use.
- **14 gauge** [0.067” (1.7 mm)]: for Extra Heavy Duty Commercial and Institutional applications with the potential of very high use.
- **12 gauge** [0.093” (2.3 mm)]: for Maximum Duty Commercial and Institutional applications with extremely high use (N/A for C and CK Series).

Material selection: in addition to the thickness of base material, the following base material types of metal are available:

- Commercial quality cold rolled steel conforming to ASTM specifications A1008, A568, and A569 is commonly used on interior openings.
- Galvannealed Steel conforming to ASTM specification A653 is recommended for use on exterior openings or for interior locations where high humidity is present.

F, FN, and C Series frame profiles

(Install as part of wall framing sequence)

- Double rabbet
- Single rabbet typ JD < 4 ½”
- Cased open for double swing
- Casing-ready (welded)

MU Series frame profiles

(Multi-use application)

MU has backbend returns, but unlike DW/K, has no compression anchors and can be used in masonry or drywall applications

- Double rabbet
- Single rabbet (narrow double) typ JD < 3 ¾”
- Cased open

FE and DE Series double egress frame construction

(For cross corridors)

- FE Double egress
- DE Double egress for swing clear hinges

DW and K Series frame profiles

(Install in rough openings after wall is built)

- Double rabbet
- Single rabbet (narrow double) typ JD < 3 ¾”
- Cased open
- Casing-ready (knock-down)
Steel frames
Three sided steel frames are furnished in three pieces (two jambs and a head) which are anchored to the wall systems. The most common 3 sided frame components are:

1. **Hinge jamb**: vertical frame member on which the door is hinged. [For double doors (pairs), there are two hinge jambs and no strike jamb].
2. **Strike jamb**: vertical frame member into which the door latches. [For double doors (pairs), there is no strike jamb, but there are two hinge jambs].
3. **Head**: horizontal frame member which connects the jambs.

How they are supplied
The connecting corners of the 3 piece frame include precision factory die miters with interlocking tabs and corner clips. The corner miters are specially designed to insure a tight closed corner connection when assembled and installed properly. There are two methods of furnishing 3 sided frames to the job site:

- **Knock Down (KD)**: Frames are supplied in 3 pieces for assembly prior to installation at the job site by the installing contractor. This is an economical method of supplying the frames, and at the job site, there is less space consumed in staging the products, easier job site movement of material, and, usually less damage to the frame prior to installation. Note 12 gauge frames are not available as knock down.
- **Set-Up and welded**: Prior to arriving at the job site, the 3 sided frame (with factory miters) is assembled (at the distributor’s fabrication location, or by Steelcraft). The miters are welded (in accordance with ANSI A250.8-2017 [SDI 100]), finished and supplied to the job site ready for installation. **Welded frames are shipped to the job site with temporary shipping bars attached. The temporary shipping bars must be removed prior to installation. When installing frames, the temporary shipping bars must not be used as spreader bars or installation bracing.**

Job site storage
Frames shall be stored under cover on 4" (101.6 mm) wood sills, on the floor, in a manner to avoid contact with moisture, and to prevent rust and damage. Only use vented plastic or canvas. The use of no-vented materials, create a humidity chamber, which promotes blistering and corrosion. Assembled frames shall be stored in a vertical position, five (5) units maximum in a stack. Provide a ¼" (6.3 mm) space between the frames to provide air circulation.

Installation
Proper frame installation is critical for reliable door and hardware functionality. To insure proper fit, function and reliability, install all frames in accordance with ANSI A250.11 and HMMA B40.

Profile terminology
The frame profile has specific terminology related to each surface. Their jamb depth describes the frame size required. It is critical that the throat opening of the frame be compatible with the wall to which it will be attached.

**Double rabbet: standard profile**

![Diagram of double rabbet profile]

**Profile variations**
Steel frames are supplied standard as double rabbet. To accommodate various application needs, the frame profile (in any frame series) can change. Some of the typical variations are as follows:

- **Single rabbet**: Jamb depths below 4 ½" (114 mm) are single rabbet due to the dimensional limitations of the profile. Some specifications will require single rabbet profiles on frames over 4 ½" (114 mm) in jamb depth.

Profile as shown will vary on MU, DW, and K Series frames, refer to the appropriate data sheets.

- **Cased open**: Used for double acting doors (swinging in both directions), sliding doors, bi-fold doors or frames used to close-off an opening in a wall when a door is not required.

- **Double egress**: This is a frame specifically designed for cross corridor applications where traffic control is required. **This frame is not available in the Drywall Series (DW and K) or Multi-Use Series (MU).**
Typical Frame

Anchors
Frames must be anchored to the applicable wall construction. Wall construction at door openings must be of sufficient construction to support commercial or institutional grade steel doors and frames. Refer to the appropriate frame data sheets since anchor types will vary with frame constructions and noted in this manual. Basic guidelines is as follows:

Flush frames:
- **Base anchors**: one located at the bottom of each jamb
- **Jamb anchors**: Locate anchors near each hinge location in both hinge and strike jambs. Transom frames require additional anchors above the top hinge.
- **Head anchors**: For wide frame openings usually over 60" in width, an anchor located in the center of the frame head is recommended

Drywall frames:
- **Base anchors**: two (2) located at the bottom of each jamb
- **Jamb anchors**: Drywall frame includes an adjustable compression anchor near the top of each jamb
F Series flush

About the product

F Series 3 sided flush frames are designed to meet requirements for light to maximum duty applications in both commercial and institutional buildings. They are installed in both interior and exterior locations, and in virtually all types of buildings and wall constructions. These frames are to be installed as part of the wall framing sequence. They can be specified and supplied as KD (knock-down) for field assembly prior to installation or welded for installation as a complete unit.

Installation

1. Installation shall conform to the published Steelcraft installation instructions, ANSI A250.11-2012 (formerly SDI 105) Recommended Erection Instructions for Steel Frames and HMMA 840.

2. Fire Rated Assemblies must be in accordance with NFPA Pamphlet 80. The Authority Having Jurisdiction is the final authority in issues related to the installation and use of installed Fire Rated Doors.

Features and benefits

Steelcraft F Series flush frames offer the following unique features, which enhance long term functionality and durability:

1. **Die-mitered corner connections**: Die-mitered corner connection at the head and jamb insure an attractive, tight and closed mitered connection. The miter includes 4 corner tabs designed with concealed connection eliminating the need for continuous profile welding.

2. **Patented universal hinge preparations** allow for easy field conversion from standard weight .134” (3.3 mm) thick hinges to heavy weight .180” (4.7 mm) hinges.

3. **Adjustable base anchors** allow for installation adjustment when the floor is not level.

4. **Factory prepared** for field installed silencers.

5. **Factory applied baked on rust inhibiting primer** in accordance with ANSI A250.10-2011.

Specification compliance

1. Overall frame construction for the Steelcraft F Series flush frames meets the requirements of ANSI A250.8-2017 (SDI 100).

2. Hardware preparations and reinforcements are in accordance with ANSI A250.8-2017 (SDI 100). Locations are in accordance with ANSI/DHI A115.

Fire ratings

The F Series flush frames meet the broadest fire rating requirements. They are listed for installations requiring compliance to both neutral pressure testing (ASTM E152 and UL 10B) and positive pressure standards (UL 10C). Refer to the Fire Rated Section of this manual for particular listings.

**7 Gauge Hinge Reinforcement**

**Notes**

1. Variations in jamb depths available in 1/8" (3 mm) increments.
2. All F Series frames are supplied standard with masonry wire or lock-in jamb anchors and adjustable base anchors. Anchors are designed for maximum wall/frame engagement and installation flexibility.
3. F Series frames are to be installed as part of the wall framing sequence.
4. Depending on environmental and usage conditions the steel can be either cold rolled or galvannealed. Galvannealed steel is recommended for all exterior applications.
5. 12 gauge flush frames, F12, are standard equal rabbet profiles with ¾" stops.
6. For KD Corner and optional 4" Head, tabs in rabbeted area should be bent outward, not inward, during assembly (as shown).
7. F Series frames with 4" heads are mainly used in masonry applications when 2" face heads do not match course blocking.
8. For reinforcement requirements for automatic operators, see "High frequency hinge reinforcement F and FE Series" on page 79.
Standard Anchoring

1. **Wire Masonry Anchor**
   - 3/16" (5 mm) dia. wire

2. **Existing Wall Anchor**

3. **Adjustable Base Anchor**
   - Attached with S.M. screws furnished
   - Maximum adjustment 1 3/8" (35 mm) below frame

Anchoring and installation notes

1. **F16 and F14 Series commercial and institutional frames** are supplied standard with masonry wire or lock-in jamb anchors and adjustable base anchors. Anchors are designed for maximum wall/frame engagement and installation flexibility.
2. For anchoring options (e.g. Masonry T anchors) and applications, refer to "Anchoring systems" on page 84.
3. **Installation Caution Notice: Grouted frames:**
   - When temperature conditions necessitate an additive to be used in the mortar to prevent freezing, the contractor installing the frames must coat the inside of frames in the field with a corrosion resistant coating per SDI 105.
   - When frames are to be grouted full, silencers must be field installed prior to grouting.
   - Steel frames, including fire rated frames, do not require grouting. Grouting is not recommended for frames in drywall.
4. All fire rated frames must be installed in accordance with NFPA Pamphlet 80 and the Authority Having Jurisdiction.

 FN Series 1" flush face

About the product
FN Series 3 sided flush narrow 1" (25 mm) face frames are designed to meet requirements for light to extra heavy duty applications in both commercial and institutional buildings where a slim face profile is required. They are installed in both interior and exterior locations, and in virtually all types of buildings and wall constructions. These frames are to be installed as part of the wall framing sequence. They can be specified and supplied as KD (knock-down) for field assembly prior to installation or welded for installation as a complete unit.

Installation
1. Installation shall conform to the published Steelcraft installation instructions, ANSI A250.11-2012 (formerly SDI 105) Recommended Erection Instructions for Steel Frames and HMMA 840.
2. Fire Rated Assemblies must be in accordance with NFPA Pamphlet 80. The Authority Having Jurisdiction is the final authority in issues related to the installation and use of installed Fire Rated Doors.

Features and benefits
Steelcraft FN Series 1" (25 mm) flush face frames offer the following unique features, which enhance long term functionality and durability. Features can vary depending on the steel thickness of the frame:

1. Narrow 1" (25 mm) face provides a very slim appearance to the door opening.
2. Die-mitered corner connections Die-mitered corner connection at the head and jamb insure an attractive, tight and closed mitered connection. The miter includes 4 corner tabs designed with concealed connection eliminating the need for continuous profile welding.
3. Patented universal hinge preparations allow for easy field conversion from standard weight .134" (3.3 mm) thick hinges to heavy weight .180" (4.7 mm) hinges.
4. Factory prepared for field installed silencers.
5. Factory applied baked on rust inhibiting primer in accordance with ANSI A250.10-2011.

Specification compliance
1. Overall frame construction for the Steelcraft FN18, FN16 and FN14 Series flush narrow 1" (25 mm) face frames meets the requirements of ANSI A250.8-2017 (SDI 100).
2. Hardware preparations and reinforcements are in accordance with ANSI/DHI A115 unless otherwise stated.

Fire ratings
The FN Series flush narrow 1" (25 mm) face frames meet the broadest fire rating requirements. They are listed for installations requiring compliance to both neutral pressure testing (ASTM E152 and UL 10B) and positive pressure standards (UL 10C). Refer to the Fire Rated section of this manual for particular listings.

Typical wall construction and anchoring types
FN Series 1" (25 mm) flush face frame applications are designed to meet the aesthetic needs of a very slender face dimension, and still maintain the functionality of the conventional flush framing systems.

4. Knock-Down for field assembly prior to installation
5. Set-up and Welded for installation as a pre-welded unit
About the product
Steelcraft’s MU Series multi-use flush frames are designed for light to extra heavy duty applications in both commercial and institutional buildings. They can be installed in both interior and exterior locations, and in virtually all types of buildings and wall constructions. They have a jamb profile similar to the DW frames, but are designed to be installed as part of the wall framing sequence. They can be specified and/or supplied as either KD (knock-down) for field assembly prior to installation, or welded for installation as a complete unit.

Installation
1. Installation shall conform to the published Steelcraft installation instructions, ANSI A250.11-2012 (formerly SDI 105) Recommended Erection Instructions for Steel Frames and HMMA 840.
2. Fire Rated Assemblies must be in accordance with NFPA Pamphlet 80. The Authority Having Jurisdiction is the final authority in issues related to the installation and use of installed Fire Rated Doors.
3. Adjustable base anchors allow for installation adjustment when the floor is not level.
4. Factory prepared for field installed silencers.
5. Factory applied baked-on rust inhibiting primer in accordance with ANSI A250.10-2011.

Features and benefits
Steelcraft MU Series multi-use flush frames offer the following unique features which enhance long-term functionality and durability. Features can vary depending on the steel thickness of the frame:
1. Die-mitered corner connections of the MU Series multi-use flush frame corners lock together once the frame is installed. The tab/lock design:
   a. prevents the head from rising
   b. keeps the head and jamb members in alignment
   c. keeps the miter tight
   d. includes wedge-lock corner clips. Screws are supplied to secure miter.
2. Patented universal hinge preparations allow for easy field conversion from standard weight .134" (3.3 mm) thick hinges to heavy weight 0.180" (4.7 mm) hinges.
3. Adjustable base anchors allow for installation adjustment when the floor is not level.
4. Factory prepared for field installed silencers.
5. Factory applied baked-on rust inhibiting primer in accordance with ANSI A250.10-2011.

Specification compliance
1. Overall frame construction for Steelcraft MU Series multi-use flush frames meet the requirements of ANSI A250.8-2017 (SDI 100).
2. Hardware preparations and reinforcements are in accordance with ANSI A250.6. Locations are in accordance with ANSI/DHI A115 unless otherwise stated.

Fire ratings
MU Series multi-use flush frames meet the broadest fire rating requirements. They are listed for installations requiring compliance to both neutral pressure testing (ASTM E152 and UL 10B) and positive pressure standards (UL 10C). Refer to the Fire Rated Section of this manual for particular listings.

FE Series double egress

Features and benefits
Steelcraft FE Series double egress frames offer the following unique features, which enhance long term functionality and durability:

1. **Die-mitered corner connections** Die-mitered corner connection at the head and jamb insure an attractive, tight and closed mitered connection. The miter includes 4 corner tabs designed with concealed connection eliminating the need for continuous profile welding.

2. **Patented universal hinge preparations** allow for easy field conversion from standard weight .134” (3.3 mm) thick hinges to heavy weight .180” (4.7 mm) hinges.

3. **Factory prepared** for field installed silencers.

4. **Factory applied baked-on rust inhibiting primer** in accordance with ANSI A250.10-2011.

Specification compliance
1. Overall frame construction for the Steelcraft FE16 and FE14 Series double egress frames meet and exceed the requirements of ANSI A250.8-2017 (SDI 100).

2. Hardware preparations and reinforcements are in accordance with ANSI A250.6. Locations are in accordance with ANSI/DHI A115 unless otherwise stated.

Fire ratings
The FE Series double egress frames meet the broadest fire rating requirements. They are listed for installations requiring compliance to both neutral pressure testing (ASTM E152 and UL 10B) and positive pressure standards (UL 10C). Refer to the Fire Rated Section of this manual for particular listings.

Installation
1. Installation shall conform to the published Steelcraft installation instructions, ANSI A250.11-2012 (formerly SDI 105) Recommended Erection Instructions for Steel Frames and HMMA 840.

2. Fire Rated Assemblies must be in accordance with NFPA Pamphlet 80. The Authority Having Jurisdiction is the final authority in issues related to the installation and use of installed Fire Rated Doors. The Authority Having Jurisdiction is the final authority in issues related to the installation and use of installed Fire Rated Doors.

About the product
The FE Series double egress frames are designed to meet requirements for heavy to extra heavy duty applications in both commercial and institutional buildings. They are installed at interior locations, and in virtually all types of buildings and wall constructions. These frames can be specified and supplied as KD (knock-down) for field assembly prior to installation or welded for installation as a complete unit. If clear opening width for cross corridor applications is critical, refer to the DE Series Frame.
Standard construction

Elevation

Jamb Detail

Head Detail

Finished opening width (Door Opening Dimension) is the dimension from frame door rabbet to the opposite rabbet. Note: For FE and DE Series double egress frames is ⅜" (3.2 mm) undersized from the standard nominal opening width. Example: 6’0” (1829 mm) head = 71 ⅞” net width in lieu of the standard 72”.

Notes
1. Variations in jamb depths available in ¼" (3 mm) increments.
2. All FE Series frames are supplied standard with masonry and wire and weld-in base anchors. Anchors are designed for maximum wall/frame engagement and installation flexibility. Weld-in stud anchors are an optional add.
3. FE Series frames are to be installed as part of the wall framing sequence.
4. Depending on environmental and usage conditions, the steel can be either cold rolled or galvannealed. Galvannealed steel is recommended for all exterior applications.
5. Tabs in Rabbeted area should be bent outward, not inward, during assembly (as shown).
6. FE Series with 4" heads are used mainly in masonry applications when 2" face heads do not match block coursing.
7. For reinforcement requirements for automatic operators, see "High frequency hinge reinforcement F and FE Series" on page 79.
Frames • FE Series double egress

Standard anchoring

- Wire Masonry Anchor
- Existing Masonry Anchor
- Anchor for Steel Stud Partitions

Anchoring and installation notes
1. **FE Series double egress frames** are supplied standard with masonry wire and fixed base anchors. Anchors are designed for maximum wall/frame engagement, and installation flexibility. Optional weld-in jamb anchors are available as an add.

2. For anchoring options (e.g. Masonry T anchors) and applications, refer to "Anchoring systems" on page 84.

3. Installation caution notice: Grouted frames:
   - When temperature conditions necessitate an additive to be used in the mortar to prevent freezing, the contractor installing the frames must coat the inside of frames in the field with a corrosion resistant coating per SDI 105.
   - When frames are to be grouted full, silencers must be field installed prior to grouting.
   - Steel frames, including fire rated frames, do not require grouting. Grouting is not recommended for frames in drywall.

4. Special frame anchorage: Frame anchor details shown on this sheet are applicable for Double Egress frames with 2" (50 mm) faces. Anchor details will vary with frame profile changes.

5. Installation shall conform to the published Steelcraft installation instructions, SDI 105 Recommended Installation Instructions for Steel Frames.

6. All fire rated frames must be installed in accordance with NFPA Pamphlet 80 and the Authority Having Jurisdiction.

DE Series double egress

**Features and benefits**
Steelcraft DE Series double egress frames offer the following unique features, which enhance long term functionality and durability:

1. **Die-mitered corner connection** insures tight fit and assembly. Frame must be welded by prior to installation.
2. **Patented universal hinge preparations** allow for easy field conversion from standard weight .134" (3.3 mm) thick hinges to heavy weight .180" (4.7 mm) hinges.
3. **Factory prepared** for field installed silencers.
4. **Factory applied baked-on rust inhibiting primer** in accordance with ANSI A250.10-2011.
5. **Unique design to meet clear width corridor applications.**

**Specification compliance**
1. Overall frame construction for the Steelcraft DE16 and DE14 Series double egress frames meet and exceed the requirements of ANSI A250.8-2017 (SDI 100).
2. Hardware preparations and reinforcements are in accordance with ANSI A250.6. Locations are in accordance with ANSI/DHI A115 unless otherwise stated.

**Fire ratings**
The DE Series double egress frames meet the broadest fire rating requirements. They are listed for installations requiring compliance to both neutral pressure testing (ASTM E152 and UL 10B) and positive pressure standards (UL 10C). Refer to the Fire Rated Section of this manual for particular listings.

### Installation
1. Installation shall conform to the published Steelcraft installation instructions, ANSI A250.11-2012 (formerly SDI 105) Recommended Erection Instructions for Steel Frames and HMMA 840.
2. Fire Rated Assemblies must be in accordance with NFPA Pamphlet 80. The Authority Having Jurisdiction is the final authority in issues related to the installation and use of installed Fire Rated Doors.

</table>
Standard construction

Finished opening width (Door Opening Dimension) is the dimension from frame door rabbet to the opposite rabbet.

Note: For FE and DE Series double egress frames is 1/8" (3.2 mm) undersized from the standard nominal opening width. Example: 6’0" (1829 mm) head = 71 7/8" net width in lieu of the standard 72".

Standard hardware and corner conditions

Universal Mortise Hinge Prep

- 7 Gauge [0.167" (4.2mm)]
- Hinge Reinforcement

Welded Corner

- 4 1/2" (114 mm) Standard
- 5" (127 mm) Optional

Notes
1. Variations in jamb depths available in 1/8" (3 mm) increments.
2. Due to the configuration of narrow hinge jambs mating to wider heads, DE Series frames are supplied set-up and welded only.
3. All DE Series frames are supplied standard with masonry wire and weld-in base anchors. Anchors are designed for maximum wall/frame engagement and installation flexibility. Optional weld-in jamb anchors are available as an add.
4. DE Series frames are to be installed as part of the wall framing sequence.
5. Depending on environmental and usage conditions, the steel can be either cold rolled or galvanized.
6. Tabs in rabbeted area should be bent outward, not inward, during assembly (as shown).
7. Swing-Clear hinges used with DE Series double egress 2 Step hinge jambs will provide additional cross-corridor width between jambs:
   - removes the thickness of the door from the opening, even when at 90°
   - changes the Pivot Point of the door
   - can increase the clear opening width by 5 1/4" (133 mm)

</tr>
</tbody>
</table>

15 3/4" (146 mm) jamb depth frame has 3/16" (11 mm) backbends. All others have 1/2" (13 mm) backbends.
Standard anchoring

1. **DE Series double egress frames** are supplied standard with masonry wire and fixed base anchors. Anchors are designed for maximum wall/frame engagement and installation flexibility. Optional weld-in jamb anchors are available as an add.

2. **For anchoring options (e.g. Masonry T anchors) and applications, refer to “Anchoring systems” on page 84.**

3. **Installation caution notice: Grouted frames:**
   - When temperature conditions necessitate an additive to be used in the mortar to prevent freezing, the contractor installing the frames must coat the inside of frames in the field with a corrosion resistant coating per SDI 105.
   - When frames are to be grouted full, silencers must be field installed prior to grouting.
   - Steel frames, including fire rated frames, do not require grouting. Grouting is not recommended for frames in drywall.

4. **Special frame anchorage:** Frame anchor details shown on this sheet are applicable for Double Egress frames with 2" (50 mm) faces. Anchor details will vary with frame profile changes.

5. **Installation shall conform to the published Steelcraft installation instructions, SDI 105 Recommended Installation Instructions for Steel Frames.**

6. **All fire rated frames must be installed in accordance with NFPA Pamphlet 80 and the Authority Having Jurisdiction.**

About the product
Steelcraft's DW Series Drywall frames are designed for light to heavy duty applications in both commercial and institutional buildings. They can be installed in rough openings after the wall has been constructed and finished. They are installed in virtually all types of buildings in all interior drywall partition locations using baseboards. To accommodate the installation of the DW Series frames on finished drywall construction, they are supplied with a KD (knock-down) corner for quick installation.

Installation
1. Installation shall conform to the published Steelcraft installation instructions, ANSI A250.11-2012 (formerly SDI 105) Recommended Erection Instructions for Steel Frames and HMMA 840.
2. Fire Rated Assemblies must be in accordance with NFPA Pamphlet 80. The Authority Having Jurisdiction is the final authority in issues related to the installation and use of installed Fire Rated Doors.

Features and benefits
Steelcraft DW Series Drywall frames include unique features which enhance long-term functionality and durability:
1. **Quick and flexible installation** of Steelcraft’s DW Series Drywall frames facilitates their installation in minutes and they can be relocated without damage to the frame.
2. **Die-mitered corner connections** of the DW Series Drywall Frame corners lock together once the frame is installed. The tab/lock design:
   a. prevents the head from rising
   b. keeps the head and jamb members in alignment
   c. keeps the miter tight
   d. includes wedge-lock corner clips. Screws are included to secure miter.
3. **Adjustable base anchors** allow for attachment directly to the wall sill runner, and facilitates installation adjustment when the floor is not level.
4. **Factory prepared** for field installed silencers.
5. **Factory applied baked-on rust inhibiting primer** in accordance with ANSI A250.10-2011.

Specification compliance
1. Overall frame construction for the Steelcraft DW Series Drywall frames meet and exceed the requirements of ANSI A250.8-2017 (SDI 100).
2. Hardware preparations and reinforcements are in accordance with ANSI A250.6. Locations are in accordance with ANSI/DHI A115 unless otherwise stated.

Fire ratings
The DW Series Drywall frames meet the broadest fire rating requirements. They are listed for installations requiring compliance to both neutral pressure testing (ASTM E152 and UL 10B) and positive pressure standards (UL 10C). Refer to the Fire Rated Section of this manual for particular listings.

Standard hardware and corner conditions

1. Variations in jamb depths available in ¼" (3 mm) increments.
2. All DW Series frames are supplied standard with field adjustable compression anchors located near the top of each jamb and adjustable base anchors with twist-in strap base anchors in each jamb.
   a. The compression anchor can be easily adjusted with a screw driver or power driver.
   b. The lock-in base anchor system is provided for attachment directly to the floor runner (sill) when using wall baseboards.
3. Depending on environmental and usage conditions, the steel used can be either cold rolled or galvannealed. Galvannealed steel is recommended in areas of high moisture.
4. DW Series frames are supplied standard with 4 ½" standard duty hinge preps. Optional universal 4 ½" or 5" hinge preps are available.
5. DW Series with 4" heads are used mainly when installed in close proximity to a F Series or MU Series frame installed with a 4" head.

Stnadard anchoring

Jamb/Compression Anchor

Adjustable Base Anchor

Optional Security Anchor

Located at strike height.

See note #2 (below)

See note #2 (below)

See note #3 (below)

Anchoring and installation notes

1. **DW16 Series Drywall frames** are supplied standard with field adjustable compression anchors in each jamb and adjustable base anchors. DW Series frames are designed especially for use in installations using wall baseboards.

2. **For anchoring options (e.g. Masonry T anchors) and applications,** refer to "Anchoring systems" on page 84.
   - Masonry wall: Not recommended

3. **Optional security anchor:** Security anchors are recommended in frames over 8'0" (2438 mm) high or in frames installed in areas where security is a priority. Locate the security anchor immediately above or below the strike reinforcements, and on both faces of the jamb. Anchors may be used in both the strike and hinge jamb. Also recommend to be used in the head of frames for pairs.

4. **Grouting of the DW Series frames is not recommended.**

5. **Installation Caution Notice:** After the frame pieces are slid over the wall, the frame is squared by adjusting the compression anchor screws located in the soffit of the jambs. Turning the screw clockwise will tighten the frame. Check to insure the opening is plumb.

6. Installation shall conform to the published Steelcraft installation instructions, SDI 105 Recommended Installation Instructions for Steel Frames.

7. All fire rated frames must be installed in accordance with NFPA Pamphlet 80 and the Authority Having Jurisdiction.

K Series drywall

About the product
Steelcraft’s K Series Drywall frames are designed for light to heavy duty applications in both commercial and institutional buildings. They can be installed in rough openings after the wall has been constructed and finished. They are installed in virtually all types of buildings in all interior drywall partition locations not using baseboards. To accommodate the installation of the K Series Drywall frames on finished drywall construction, they are supplied with a KD (knock-down) corner for quick installation.

Installation
1. Installation shall conform to the published Steelcraft installation instructions, ANSI A250.11-2012 (formerly SDI 105) Recommended Erection Instructions for Steel Frames.
2. Fire Rated Assemblies must be in accordance with NFPA Pamphlet 80. The Authority Having Jurisdiction is the final authority in issues related to the installation and use of installed Fire Rated Doors.

Features and benefits
Steelcraft K Series Drywall frames include unique features which enhance long-term functionality and durability:
1. Quick and flexible installation of Steelcraft’s K Series Drywall frames facilitates their installation in minutes and they can be relocated without damage to the frame.
2. Die-mitered corner connections of the K Series Drywall Frame corners lock together once the frame is installed. The tab/lock design:
   a. prevents the head from rising
   b. keeps the head and jamb members in alignment
   c. keeps the miter tight
   d. includes wedge-lock corner clips. Screws are supplied to secure miter.
3. Sill attachment is made through the face of the frame directly into the wall sill runner. The frame is supplied with factory countersunk holes for the screw attachment.
4. Factory prepared for field installed silencers.
5. Factory applied baked-on rust inhibiting primer in accordance with ANSI A250.10-2011.

Specification compliance
1. Overall frame construction for Steelcraft K Series Drywall frames meet the requirements of ANSI A250.8-2017 (SDI 100).
2. Hardware preparations and reinforcements are in accordance with ANSI/DHI A115 unless otherwise stated.

Fire ratings
The K Series Drywall frames meet the broadest fire rating requirements. They are listed for installations requiring compliance to both neutral pressure testing (ASTM E152 and UL 10B) and positive pressure standards (UL 10C). Refer to the Fire Rated Section of this manual for particular listings.

### Standard hardware and corner conditions

**Mortise Hinge Prep**
- 4 1⁄2" (114 mm) Standard
- 5" (127 mm) Optional
- 7 Gauge Hinge Reinforcement

**4 3⁄8" (124 mm) Strike Prep (ASA)**

**KD Corner Detail**

**Optional 4" (102 mm) Face Head Detail**

### Notes
1. Variations in jamb depths available in ⅛" (3 mm) increments.
2. All K Series frames are supplied standard with field adjustable compression anchors located near the top of each jamb and factory countersunk holes for direct screw attachment to the wall runner.
   - The compression anchor can be easily adjusted with a screw driver or power driver.
   - A fastener [typically a drywall screw (by others)] is installed through the factory countersunk hole for attachment directly to the floor runner (sill) when not using wall baseboards.
3. Depending on environmental and usage conditions, the steel used can be either cold rolled or galvannealed. Galvannealed steel is recommended in areas of high moisture.
4. K Series frames are supplied standard with 4 ½" standard duty hinge preps. Optional universal 4 ½" or 5" hinge preps are available.
5. K Series with 4" heads are used mainly when installed in close proximity to a F Series or MU Series frame installed with a 4" head.

Standard anchoring

**Jamb/Compression Anchor**
- See note #2 (below)

**Base Anchor**
- #8 x 1 ¼" Phillips Flat Head Sheet Metal Screws (2 per jamb)

**Optional Security Anchor**
- Locate at strike height. See note #3 (below).

**Anchoring and installation notes**
1. **K Series Drywall frames** are supplied with field adjustable compression anchors in each jamb. The base of each jamb is anchored to the wall by installing screws through the factory prepared anchor holes. K Series frames are designed especially for use in applications not using base boards.
2. **For anchoring applications, refer to “Anchoring systems” on page 84.**
3. **Optional security anchor:** Security anchors are recommended in frames over 8'0" (2438 mm) high or in frames installed in areas where security is a priority. Locate the security anchor immediately above or below the strike reinforcements, and on both faces of the jamb. Anchors may be used in both the strike and hinge jamb. Also recommend to be used in the head of the frame for pairs.
4. **Grouting of the K Series frames** is not recommended.
5. Installation shall conform to the published Steelcraft installation instructions, SDI 105 Recommended Installation Instructions for Steel Frames.
6. All fire rated frames must be installed in accordance with NFPA Pamphlet 80 and the Authority Having Jurisdiction.

1. Usage frequency is based on ANSI A250.8-2017 (SDI 100)
2. Commercial quality carbon steel
3. Reinforcements for galvannealed frames are also galvannealed
4. Knock-Down for field assembly prior to installation
C and CK Series casing-ready (no backbend)

About the product
Steelcraft’s C and CK Series Drywall frames are designed for light to heavy duty applications in both commercial and institutional buildings. They are installed in virtually all types of buildings for drywall applications where there is a desire to add custom architectural trim casing. These frames do not have backbends and have nail/screw attachment holes in the face.

The C series frames are typically welded and installed as part of the wall framing sequence using wood or steel stud anchors, building the wall up to the frame. These can be supplied as KD (knock-down) for field assembly or welded prior to installation as a complete unit, similar to F series frames.

The CK series frames are installed in rough openings after the wall has been constructed and finished. They are supplied KD (knock-down) and installed using compression anchors with an attachment hole at the bottom of each face serving as base anchors, similar to K series frames, but are anchored also through the nail/screw attachment holes in the face rather than wood or steel stud anchors. This provides a very quick and easy installation while maintaining heavy duty commercial frame standards.

Installation
1. Installation shall conform to the published Steelcraft installation instructions, ANSI A250.11-2012 (formerly SDI 105) Recommended Erection Instructions for Steel Frames and HMMA 840.
2. Fire Rated Assemblies must be in accordance with NFPA Pamphlet 80. The Authority Having Jurisdiction is the final authority in issues related to the installation and use of installed Fire Rated Doors. Up to 90 minute labels available.
3. See installation instructions provided in your customer distributor portal.

Features and benefits
Steelcraft’s C and CK Series casing-ready (no backbend) frames offer the following unique features, which enhance long term functionality and durability:
1. No back bends to accommodate architectural trim casing.
2. Frame face anchor holes using nails/screws for quick anchoring in place of or in addition to traditional stud anchors in the frame throat.
3. Die-mitered corner connections have tabs in the head and slots in the jambs to accommodate KD installation with compression anchors (with tabs not bent over) and welded (with tabs bent over). The tab/lock design:
   a. prevents the head from rising
   b. keeps the head and jamb members in alignment
   c. keeps the miter tight
4. 14 and 16 gauge for heavy duty commercial applications.
5. Factory prepped for field installed silencers.
6. Factory applied based on rust inhibiting primer in accordance with ANSI 250.10-2011.

C Series, typically installed with the walls (sim. to F)
1. Intended for welded assemblies, available welded or KD.
2. Anchors are Weld-in wood stud std or omit / use standard face anchor holes. No compression anchors available. Fire rated must use Jamb anchors and frame must be welded.
3. Adjustable base anchors provided for uneven floors.

CK Series, typically installed after finished walls (sim. to K)
1. KD (knock-down) only.
2. Anchors are Compression anchors and face anchor holes standard (no omit and no jamb anchors).
3. CK base anchor is the bottom face attachment hole nailed/screwed into the wall sill runner. No countersink.

Specification compliance
1. Overall frame construction meets requirements of ANSI A250.8-2017 (SDI 100).
2. Hardware preparations and reinforcements are in accordance with ANSI A250.8-2017 (SDI 100). Locations are in accordance with ANSI/DHI A115.

Fire ratings
The C and CK Series frames can be rated up to 90 minutes. C series must be welded with weld-in anchors. They are listed for installations requiring compliance to both neutral pressure testing (ASTM E152 and UL 10B) and positive pressure standards (UL 10C). Refer to the Fire Rated Section of this manual for particular listings.

DIE MITERED with two(2) concealed tabs locating head and jambs. Tabs are in head, slots are in jambs.
**Standard hardware and corner conditions**

**Mortise Hinge Prep**

```
4 1/2" (114 mm) Standard
5" (127 mm) Optional
```

**Strike Prep (ASA)**

```
4 1/8" (124 mm)
```

**7 Gauge Hinge Reinforcement**

**Notes**

1. Variations in jamb depths available in 1/8" (3 mm) increments.
2. Depending on environment and usage conditions the steel can be either cold rolled or galvannealed. Galvannealed is recommended in areas of high moisture.
3. For welded frames, bend the tabs outward, not inward, during assembly.
4. Available options and hardware preps include the following:
   a. Omit bumper prep.
   b. Surface bolts in face, soffit, self-latching, and universal flush bolt preps
   c. Removable mullion prep.
   d. Strike in head
   e. Roller latch
   f. Coordinator, face mounted and soffit mounted
   g. Additional Strike preps including ASA, CYL, RPD, and blank
   h. High frequency hinge, required over 7’2"
   i. Electrical preps including Mag switch and electric hinge
5. For options not shown, we may be able to accommodate with an engineering detailed request. Email technical product support at Doors_Frames_TechProdSupport@allegion.com.

Frames • C and CK Series casing-ready (no backbend)

Standard anchoring

C Series weld-in wood stud anchor with Face anchor holes

See note #2 for additional anchoring options

C Series Base Anchor

Attached with S. M. screws (furnished)

Maximum adjustment 1 3/8” (35 mm) below frame

CK Series Jamb/Compression Anchor

CK Series Base Anchor

See note #1 and CK note 2.c (below)

Anchoring and installation notes

1. Face anchor holes are supplied standard for both C and CK series frames.
   a. 5/32" pre-punched for #8 Tek or fine threaded drywall screws for typical steel stud applications, or 10D-12D nails max for wood stud applications, not included
   b. Holes are punched at 16" on center max, spaced evenly the total height of heads and jambs. Typically located 5/8" from open edge of 2" face, 1/2" from bottom and 5/8" from corners.

2. For stud, frame, and casing installation details see the next 2 pages. Additional details can be found in the C/CK Installation Guide at us.allegion.com/en/home/products/brands/steelfcraft.html.

3. Standard anchoring shown. For anchoring options and applications, refer to "Anchoring systems" on page 84.

C Series

1. Frames are supplied as part of the wall framing sequence (prior to completing stud walls/studs extend into the jamb throat and anchored).

2. Anchors
   a. Supplied with standard weld-in wood stud anchors (snip off or bend in ears if using steel studs or steel studs with no wood stud supports). Face anchor holes may be used in addition to or instead of standard anchors. Rated frames must use weld-in stud anchors and must have welded corners at the factory or in the field.
   b. Weld-in adjustable base anchors standard, option weld-in floor anchor (not adjustable).
   c. Optional weld-in jamb anchors include steel stud, nailing strap, flush steel stud, recessed steel stud z-anchors. Anchors available loose.

CK Series

1. Frames are supplied KD to be installed in the rough opening after the wall has been constructed (and typically already finished). Rough opening is Nominal opening width plus 2" and Nominal opening height plus 1" (same as max dimensions for DW/K series). See installation guide for additional notes.

2. Anchors
   a. Supplied with standard field adjustable compression anchors near the top of each jamb.
   b. Face anchor holes provide direct screw attachment to the wall runner.
   c. Lowest face anchor hole serves as base anchor. This is similar to K series base anchors but does not include countersink since several options are available to avoid interference with trim casing (see C/CK Installation Guide).
   d. No anchor options available.

3. Additional notes and images of CK installation provided in C/CK Installation Guide on your distributor portal.

* ½" pre-punched for #8 fine thread screws for steel studs or 10D-12D nails max for wood studs, not included

Wall Construction

C Series frames are installed as part of the stud wall framing sequence. The studs (typically steel studs in commercial applications) are installed tight against the jambs.

CK Series frames are installed after the stud walls.

- The rough opening width dimension (A) is the nominal frame opening width (B) plus 2".
- The rough opening height dimension (E) is the nominal frame opening height (D) plus 1".
- Jamb depth (C) is at least ⅛" greater than wall thickness. See "Frame profile jamb depth selection examples" on page 55.
- Casing inside dimension width (F) and height (G) are approximately ¼" less than the nominal opening width and ⅛" less than the nominal opening height resulting in about ⅛" distance to rabbets (see example on next page).
C Series Welded Frames
Install the 3-sided corner welded frames into the opening with the walls, pushing studs up tight against jamb anchors. Use temporary low and mid-height spreader bars, and check plumb, level, square, and twist throughout installation.

Using default wood stud anchors
- Steel stud anchors (without straps) may be specified in order

Using optional recessed steel stud Z-anchors
- This layout also applies for omitting jamb anchors (non-rated only).

CK Series knock down frame with compression anchors
Install wall before frame. Hold head in place, then slide in each jamb so that head tabs are inserted securely into jamb slots. Adjust compression anchors and add lower and mid-height spreader bars, locking into place with face anchor holes. Check proper location in rough opening, plumb, level, square, and twist throughout installation.

C/CK Notes:
1. Examples use 3 5/8" steel studs with 5" JD and has no margin of error in wall construction—consider greater JD's such as 5 3/8". For other choices, see "Frame profile jamb depth selection examples" on page 55.
3. Size and gauge of steel stud, as well as resulting need for a single versus back-to-back studs should be recommended by architect, engineer, or building contractor.

Fire rated openings
1. C/CK must use double studs and 2 drywall sheets per side, each entering frame throat 1 1/2" minimum. C series only must be welded and use jamb anchors.
2. Holes in frame face not covered by drywall must be filled using fire rated caulk, typically addressed during trim casing installation.
3. Install trim casing using non-invasive methods (structural adhesive, tape, magnets). Use rated caulks under trim to seal any mechanical fastener or other holes. Acceptable tapes for rated applications are 3M's #969, #950, #444.

Face anchor attachment options:
1. 1 1/4" Teks Screws (shown).
2. Countersink and use narrow threaded drywall screws.
3. If using wood studs, nails may be used (predisdrill studs).

Custom wood casing attachment options
1. Adhesive caulk or tape (rated openings must use rated caulks/tapes).
2. Screws (predisdrill or metal-piercing screws).
3. Nails if using wood studs (if using metal studs, you may back with caulk and use finish nail gun with appropriate technique).
4. Magnet style casing.

Options if your wood casing will not lie flat enough
1. Use cored out type casing.
2. Use caulk to hide gaps.
3. Countersink and use fine threaded drywall screws.
4. Remove material on back of casing at screw heads.

**F Series unequal rabbet frames**

- **Gauge:** 16 Ga. (1.3 mm), 14 Ga. (1.7 mm)
- **Jamb depth:** 4 1/2" (121 mm) min. thru 20" (508 mm) in 1/8" (3.2 mm) increments
- **Face:** Standard 2" (50 mm), Non-standard 1" (25.4 mm) thru 4" (102 mm) in 1/8" (3.2 mm) increments
- **Backbend:** 9/16" (11 mm) for 5 3/16" Frame depth
- **Miter:** 45° die miter with 4 interlocking tabs for welded

**Notes:**

1. F Series (2" face) and FN Series (1" face) are available KD or welded. All other frames with custom face dimensions must be welded prior to installation.
2. Tabs in Rabbeted area should be bent outward, not inward, during assembly.

**Notes:**

1. Conventional FE Series double egress heads have a different profile from the jambs. Both heads and jambs are considered to have a 2” face.

2. Since the door is mounted on the centerline of the jamb depth, the 2” face of the jamb includes an 1 3/8” visible face and a 5/8” additional stop.

3. The door opening dimension of Steelcraft FE Series double egress frames is 1/8” undersized to insure proper door center clearances are maintained. Door widths must be adjusted accordingly when using wood or non-Steelcraft doors.

4. Tabs in Rabbeted area should be bent outward, not inward, during assembly (as shown).
Frame variations and options · Profile Variations

FE Series double egress frames

Finished opening width (Door Opening Dimension) is the dimension from the frame door rabbet to the opposite rabbet.

- **Note:** FE and DE Series double egress frames are \( \frac{1}{8} \)" (3.2 mm) undersized from the standard nominal opening width. Example: 6’0” (1829 mm) head = 71 7/8” net width in lieu of the standard 72”.

Clear Opening Width is the dimension between doors, measured from door face to door face, when both doors are open 90 degrees.

- **Note:** This dimension is critical for compliance with handicapped accessibility.

Corridor Width is the actual dimension between walls in a corridor.

- **Note:** This dimension is critical in sizing the finished opening width (Door Opening Dimension) of the double egress frame.

**Application**

FE Series double egress frames are designed for use in cross corridor application where clear opening width is not of major concern. Conventional butt or continuous hinges are used. For applications where clear opening width is critical the DE Series double egress frame is recommended.

**Purpose**

FE Series double egress frames are used in cross corridor application for traffic and smoke control.

**Product availability**

This product option is available for the following Steelcraft frame Series:

- FE16 and FE14 in depths from 4 ¾” (121 mm) to 14” (356 mm).

</tbody>
</table>

Notes:
1. Face dimensions on the DE Series frames are 2" faces for on both heads and jambs.
2. Frame depth varies for head to jambs. This variation allows for larger clear opening widths for handicapped accessibility.
   - **Frame depth** (head): This is the jamb depth of the head and is the size specified when ordering.
   - **Jamb dimension** (jamb): This is the actual jamb depth of the vertical frame member. This dimension is not specified when ordering. Refer to table for additional clarification.
3. The door opening dimension of Steelcraft DE Series double egress frames is 1/8" undersized to insure proper door center clearances are maintained. Door widths must be adjusted accordingly when using wood or non-Steelcraft doors.
4. Tabs in rabbeted area should be bent outward, not inward, during assembly (as shown).
DE Series double egress frames

**Finished opening width (Door Opening Dimension)** is the dimension from the frame door rabbet to the opposite rabbet.

- Note: FE and DE Series double egress frames are ⅜" (3.2 mm) undersized from the standard nominal opening width. Example: 6'0" (1829 mm) head = 71 7/8" net width in lieu of the standard 72".

**Clear Opening Width** is the dimension between doors, measured from door face to door face, when both doors are open 90 degrees.

- Note: this dimension is critical for compliance with handicapped accessibility.

**Corridor Width** is the actual dimension between walls in a corridor.

- Note: this dimension is critical in sizing the finished opening width (Door Opening Dimension) of the double egress frame.

**Application**
DE Series double egress frames are designed for use in cross corridor application where clear opening width is of major concern. Swing clear hinges or pocket pivot hinges are used. For applications where clear opening width is not critical the FE Series double egress frame is recommended.

**Purpose**
DE Series double egress frames are used in cross corridor application for traffic and smoke control.

**Product availability**
This product option is available for the following Steelcraft frame Series:
- DE16 and DE14 in depths from 4 ¾" (121 mm) to 14" (356 mm)
Standard DW, K, and MU Series double rabbeted frames

</tr>
</thead>
<tbody>
<tr>
<td>Jamb depth:</td>
<td>3 ¾&quot; through 14 ¾&quot; in ½&quot; increments</td>
</tr>
</tbody>
</table>

Notes:
1. MU Series frames with 4" heads are used mainly in masonry applications when 2" face heads do not match block coursing.
2. DW and K Series with 4" heads are used mainly, when installed in close proximity to a F Series or MU Series frame installed with a 4" head.
3. DW, KD, and MU corners includes wedge-lock corner clips. Screws are supplied to secure miter.
Silencer preparations

Frames are supplied factory prepared for field installed silencers (3 per strike jamb and/or 2 per double door head).

Caution: When frames are to be grout filled, it is the responsibility of the installing contractor to guard off the silencer holes.

Exceptions: Field applied self adhesive silencers are used on all mullions.
Dutch doors

Non-labeled

### Application
- Single Swing applications only: no double door configurations.
- Standard Dutch Door Frame Openings are prepared for:
  - 4 ½" (114 mm) x 4 ½" (114 mm) universal hinge reinforcements, 1 pair per leaf.

High Frequency Hinge Reinforcements are installed at the top hinge for each door leaf:
- One (1) ASA 4 ¾" (124 mm) high ANSI A115.1 or 2 strike aligned for top and bottom leaf.
- Optional Strike Preparations for the Top Leaf include:
  - One (1) ASA 2 ¾" (70 mm) high ANSI A115.3 strike aligned for top and bottom leaf, or
  - One (1) CYL 4 ¾" (124 mm) high ANSI A115.1 or 2 strike or one (1) ASA 2 ¾" (70 mm).
- Sizes available from 2'0" (610 mm) x 6'8" (2032 mm) thru 4'0" (1219 mm) x 8'0" (2438 mm).

### Purpose
Together with the use of a dutch door shelf, dutch doors can be viewed as an extension of nearby counter tops as well as allowing the passage of materials without opening the entire door leaf.

### Product availability
This product option is available for the following Steelcraft frame Series:
- FI6, FI4, FN16, FN14, MU16, and MU14 in depths from 3 ¾" (83 mm) to 20" (508 mm).
- DW16, DW14, K16, and K14 in depths from 3 ½" (83 mm) to 14 ¾" (372 mm).

Refer to pages 136-140 in the Door Section of this manual for information of applicable dutch doors.

### Door opening height

<table>
<thead>
<tr>
<th>Door opening height</th>

<td>20 9⁄16&quot; (522 mm)</td>
</tr>
<tr>
<td>7'2&quot; (2184 mm)</td>
<td>22 9⁄16&quot; (573 mm)</td>
</tr>
</tbody>
</table>
Frame variations and options • Dutch doors

Labeled

- Refer to pages 136-140 in the Door Section of this manual for information of applicable dutch doors.
- Maximum 3 hour approval in sizes up to 4'0" x 7'2". Refer to the Fire Rated section of this manual for fire rated approvals.

Purpose

Together with the use of a dutch door shelf, dutch doors can be viewed as an extension of nearby counter tops as well as allowing the passage of materials without opening the entire door leaf.

Product availability

This product option is available for the following Steelcraft labeled frame Series:

- F16 and F14 in depths from 3" (76 mm) to 14" (356 mm).
- MU16 and MU14 in depths from 3 ¼" (83 mm) to 14" (356 mm)

Application

- Single Swing applications only: no double door configurations.

Hinge preparations for standard dutch door frame openings include:

- 4 ½" (114 mm) x 4 ½" (114 mm) universal hinge reinforcements, 1 pair per leaf.
- High Frequency Hinge Reinforcements are installed at the top hinge for each door leaf.

Optional Strike Preparations for the Top Leaf include:

- One (1) ASA 4 ½" (124 mm) high ANSI A115.1 or 2 strike aligned for top and bottom leaf, or
- One (1) CYL 2 ¾" (70 mm) high ANSI A115.3 strike aligned for top and bottom leaf, or
- One (1) ASA 4 ½" (124 mm) high ANSI A115.1 or 2 strike or one (1) CYL 2 ¾" (70 mm) high ANSI A115.3 strike aligned for the bottom leaf due to the latch bolt from the top leaf projecting into the strike preparation in the bottom leaf (see pages 138-140).

Frame head is equipped with a closer reinforcement.

Sizes available from 2'0" (610 mm) x 6'8" (2032 mm) thru 4'0" (1219 mm) x 7'2" (2184 mm).

Labeled opening height | Dimension “D”
---|---
6'8" (2032 mm) | 16 9⁄16" (421 mm)
7'0" (2134 mm) | 20 9⁄16" (522 mm)
7'2" (2184 mm) | 22 9⁄16" (573 mm)
Communicating frames

Labeled application
Maximum 3 hour approval in sizes up to 4'0" x 8'0" single doors or 8'0" x 8'0" pairs. Refer to the Fire Rated section of this manual for fire rated approvals.

Application
These Frames are prepared for hanging a door in each rabbet.
1. 1 15⁄16" (49 mm) rabbets are prepared for 1 3⁄8" (45 mm) doors.
2. The 1 9⁄16" (40 mm) rabbets are prepared for 1 3⁄8" (35 mm) doors.
3. 1 ⅛" (35 mm) x 1 ¾" (45 mm) doors can be accommodated.

These communicating frames are primarily used in the Hospitality Segment of building types to separate two (2) adjoining rooms.

Purpose
Communicating frames provide security for both adjoining rooms: each door is locked from the occupied side of each room.

Product availability
This frame option is available for the following Steelcraft Series of Frames:
• FN16, FN14, FI6, FI4, MU16, and MU 14 for Singles and Pairs.
• DW16, DW14, K16, and K14 for Single Swing only.

Note:
1. When using DW and K Series Frames, doors are to be hinged on opposite jambs.
Hospital stops

**Terminated or sanitary steps**

**Single rabbet**

**Double rabbet**

**Note:**
1. 45° Hospital stops are measured from the bottom of the frame to the bottom of the 45° stop miter.

**Application**
- Frames with Hospital stops are primarily used in the health care segment where cleanliness is required.
- Frames with optional hospital stop preparations include stops which do not run the full height of the frame.
- The stop terminates above the floor line and is closed with a 45° or 90° angle.

**Purpose**
The stop terminating above the floor line allows for easier cleaning and minimizes the build-up of germs, bacteria and residue at the floor level of the door opening.

**Product availability**
This frame option is available for the following Steelcraft Series Frames:
- Single Rabbet 45° only: F16 and F14
- Double Rabbet 45°: FN16, FN14, F16, F14, DW16, DW14, K16, K14, MU16, and MU14
- Double Rabbet 90°: FN16, FN14, F16, F14, DW16, DW14, K16, K14, MU16, and MU14
- Weld-in base anchors are included as standard and not available without.
- F and MU Series frames come standard with weld-in one-piece base anchor/filler plates, which are not available as omit.
- Standard base anchors for DW and K Series will remain available

**Labeled application**
- Maximum 3 hour approval in sizes up to 4'0" x 8'0" single doors or 8'0" x 8'0" pairs. Refer to the Fire Rated section of this manual for fire rated approvals
- Frames with hospital stop are available for smoke and draft applications.
- Only 4" Hospital stops with EMA anchored frames may be labeled. When using EMA anchors, the max height of hospital stop is 4"
Head reinforcement, 12 gauge full width channel

Application
Continuous head reinforcement channels are used at the specifiers’ discretion to safeguard against head sag in door openings usually over 6’0” in width. The 12 gauge continuous head reinforcement is 1” (25 mm) less in length than the nominal head size, i.e., a head for a 6’0” (1829 mm) pair of doors would require a 71” (1803 mm) long continuous head reinforcement:

• Welded into frame head
• Minimum 2” (50 mm) face dimension
• Length, other than standard, must be specified

Purpose
When there is concern for the weight of overhead wall construction, or, when multiple surface-applied hardware components are being used, this continuous steel channel has the ability to spread and transfer the load to the floor through the jambs while also providing the necessary strength and thickness for thread engagement.

Note: Hollow metal frames, with or without the optional continuous head reinforcement, are not designed as or intended to be a load bearing member of wall construction.

Product availability
This optional frame component is available for the following Steelcraft standard double rabbet profile Series frames: F16, F14, MU16, MU14, DW16, DW14, K16, and K14.

• Also available on standard FE or DE Series double egress frames
Lead lined

**Clips**
(all lead lining supplied by owners)

Form lead, as shown, to fit over guards. Open clips are provided for the installation of the lead.

- **Base anchor strap**
- **Clip closed**

Cut lead to fit around base anchor strap

Hammer flat — Fit lead around these anchor strap and flatten for the installation of the base anchor.

- **Tackwelds**
- **Floor to ceiling structural angle by others**
- **Weld frame to structural angles**

**Application**

Lead lined frames are intended for use in the X-ray Room locations in Health Care facilities.

- Frames are supplied knock-down (KD). Frame preparation and installation of lead lining by others.
- Thickness of lead varies as required or specified for the type of equipment being used.
- Lead is located on the door side of the frame, covering the inside surfaces of the face, rabbet, stop and part, or all, of the soffit. Lead linings are to be overlapped at the miters of the frame.
- It is recommended that the installation of the lead be done by a local lead contractor who may also be installing lead in the walls, floor and ceiling of the room where the lead lined frame is being used.
- For masonry wire anchoring applications only with all others being subject to the authority having jurisdiction.

**Product availability**

This product option is available for Steelcraft labeled or non-labeled F and MU Series Frames.

**Notes:**

1. Lead supplied by others.
2. **CAUTION:** Any cutting of lead to fit around hardware reinforcements can cause leakage of X-Rays through the frame.
3. The doors, walls and other perimeter construction must also include integral lead lining.
4. Wire masonry anchors only (labeled and non-labeled)

**Purpose**

Attachment clips are furnished for the installation of lead lining in frames used in X-Ray rooms.
Rough buck frames

Application
Rough Buck (Cabinet) frames are specialty frames that include a sub-channel (Rough Buck). The sub-channel is attached to an existing wall condition. The exposed steel (Cabinet Frame) is then attached to the sub-channel with fasteners provided by others.

Rough Buck (Cabinet) frames are rarely used. They are usually installed in pre-cast existing masonry wall applications.

Purpose
Using this frame application allows contractors to install the Rough Buck relatively early in the construction cycle. The finished frame (Cabinet Frame) is then installed at a later date.

Product availability
This frame option is available on special order only. It is a Non-Stock item. It is available as a non-labeled frame only.
Applied stops

Application
Frames with applied stops are used in commercial and/or institutional applications where sound control is a consideration. Frames configured as Cased Open sections can be prepared for standard template hinges at standard Steelcraft vertical locations. Applied stops, manufactured by others, can be attached to the center portion of the frame either as a hardware item, for safeguarding acoustical control, weather stripping or for spring adjustable sealing. The field applied stop must provide a $1 \frac{9}{16}$" (40 mm) rabbet to accommodate a $1 \frac{3}{8}$" (35 mm) thick door, or a $1 \frac{15}{16}$" (49 mm) rabbet accommodating a $1 \frac{3}{4}$" (45 mm) thick door.

Purpose
Frames for applied stops provide versatility for the building owner to accommodate security, sound attenuation or weather protection using integrated sealing hardware.

Product availability
This frame option is available as non-labeled only for the following Steelcraft Series of frames: FN16, FN14, F16, F14, MU16 and MU 14, DW16, DW14, K16, and K14.
Hardware

High frequency hinge reinforcement F and FE Series

10 Gauge Auxiliary Hinge Reinforcement

Arc Weld 3 Places Each Reinforcement

Standard or Universal Hinge Reinforcement

Plaster Guard

Auxiliary Hinge Reinforcement
3HR0103P002-GL

Application
High frequency hinge reinforcements are installed in frames located in high abuse areas of commercial and/or institutional facilities formed to match the contour of the frame, the 10 gauge (3 mm) auxiliary hinge reinforcement is arc welded in 3 locations of the frame:

- The frame face
- The 7 gauge (4.7 mm) hinge reinforcement (projection welded to the frame at the factory)
- The soffit section The auxiliary reinforcement is primarily applicable to the top hinge reinforcement of 4 1⁄2" (114 mm) or 5" (127 mm) hinge reinforcements, but may be used on other hinge locations when specified.

Purpose
The optional high frequency hinge reinforcement provides additional strength to the 4 1⁄2" (114 mm) or 5" (127 mm) hinge reinforcement specified for use in high abuse openings, including dutch doors, and doors with automatic operators.

Product availability
High frequency hinge reinforcements are available factory installed, or, may be installed in the local Steelcraft distributor’s fabrication shop and is applicable to all series of Steelcraft labeled and non-labeled steel frames.

Automatic operators
- Automatic Operators, such as those from LCN http://us.allegion.com/en/home/support/library.html (search "automatic operators" filtered by LCN; Catalogs) or any manufacturer, place a great deal of stress on the hinges of a frame and can cause failure. When using automatic operators with butt hinging systems any frame used must include all of the following:
  - High frequency hinge reinforcing installed
  - 14 gauge steel
  - 5" heavy weight hinges
Thick doors

**Over 1 3/4" thru 3" thick**

*Backbend: 3/16" (11 mm) for 5 3/4" Frame depth

**Application**
- Door rabbet to be equal to the door thickness plus 3/16" (5 mm) for clearances
- Backset on Hinge preparation must be specified:
  - Regular Weight
  - Heavy Weight
- Backset on Strike preparation must be specified
- Frame must be welded

**Purpose**
To accommodate the varying thickness of Specialty doors requiring a standard frame profile.

**Product availability**
This special frame option is available for Labeled and Non-labeled 16 gauge (1.3 mm) and 14 gauge (1.7 mm) Steelcraft F and FN Series frames.
Weather seals

PS-074™ Surface applied weatherstrip

Application
The Weatherstrip is manufactured from a flexible, black plastic material (TPE) that is resistant to paint migration, impervious to fatigue and capable of withstanding extreme temperatures:

- Ideal temperature range to apply PS-074 Weatherstrip is 70° to 90°F (21° to 32°C).
- PS-074™ should not be applied when the temperature is below 50°F (10°C) or above 100°F (38°C).
- Warranted shelf life of adhesive is 12 months when stored at 70°F (21°C) and 50% relative humidity.
- When tested in accordance with ASTM E-283 (air infiltration) and ASTM E-331 (water resistance) PS-074 Weatherstrip had an air infiltration rate of .074 cubic feet per minute, per lineal foot of crack, and, no water leakage.

Purpose
Steelcraft PS074 Weatherstrip, when applied to frames and overlapping astragals, will perform as an effective seal against adverse weather conditions.

Product availability
This product is available from factory inventory and can be applied to the full line of Steelcraft frames. Application to label frames is subject to the Authority Having Jurisdiction.
Frame variations and options • Throat fillers

Throat fillers

Rigid vinyl

Application
The Steelcraft Throat filler is made of extruded rigid vinyl:

- Sections supplied with double faced tape applied to the inside lip for installation on frame backbends.
- Standard length of Throat filler sections is 87" (2210 mm) to ensure continuous sections that accommodate heights up to 7'2" (2184 mm).
- To be applied to the backbend(s) of frames after they have been installed on the wall:
  - Jamb filler(s) are to be equal to the overall length of the jamb backbend.
  - Head filler(s) are to be 1" (25 mm) less than the overall length of the head backbend.

Purpose
When wall thickness is between 1⁄8" (3 mm) to 1⁄4" (6 mm) less than the frame throat dimension, Throat filler section(s) can be used to fill the gap, assuring the proper amount of grip required to complete the installation.

Product availability
This optional frame component is available from factory inventory and is applicable to Steelcraft non-labeled DW and K Series frames.

Kerf frames

Integral

**Gauge:** 16 Ga. (1.3 mm)

**Jamb Depth:**
- F, MU, DW, and K Series: 5” (127 mm) min. through 14 3/4” (375 mm) for standard profile.
- F Series: 4 1/8” (105 mm) min. through 14 3/4” (375 mm) for single rabbet
- Note: EMA anchors require minimum jamb depth of 5 5/8” for standard profile frames.

**Face:** Standard 2” (51 mm) face head and jamb dimensions with 4” (102 mm) face head optional on equal and unequal rabbet only.

**Miter:** 45° die miter with soffit tab and interlocking corner clip.

**Opening Size:** 8’0” x 8’0” (2439 mm x 2439 mm) maximum.

**Profile Options:** 1 15/16” (49 mm) or 1 9/16” (40 mm) equal rabbet profiles or single rabbet profiles.

**Backbend:** 3/8” (11 mm) for 5 3/4” frame jamb depth on F Series only.

**Application**

The Integral Kerf frame is intended for use in areas, interior or exterior, which require a further reduction in air flow from the door and frame. The kerf material is manufactured from a durable, UV-resistant, polyethylene cladding covering the urethane foam. The gasket material complies with UL 10C. They have also passed the water penetration test up to 34 mph per ASTM E-331.

- Frames are supplied knock-down as standard with gasket material shipped loose for insertion into frame by others.

- Replacement gasket material can be found in the Parts section of the price manual.

**Product availability**

This optional frame feature is available for the following Steelcraft frame series:
- Equal and unequal rabbet F16, MU16, DW16 and K16
- Single rabbet F16

**Labeled application**

Maximum 3 hour fire rating approval up to an 8’0” x 8’0” opening size.
Frame variations and options • Anchoring systems

Anchoring systems

F, FN, MU, FE, and DE Series Flush Frames

1. All Frames in this category are supplied standard with masonry wire or lock-in jamb anchors and adjustable base anchors. Anchors are designed for maximum wall/frame engagement and installation flexibility.

2. Anchoring Applications:
   - Masonry Wall: Masonry wire anchors (3/16" [5 mm] diameter) provide maximum engagements in mortar joints, and allow for full internal grouting during installation. The anchor is to be spread wider than the jamb depth and twisted into position. Adjustable base anchors are attached directly to the floor and adjusted. The wall is built around the anchored frame.
   - Existing Masonry Walls: Specifically designed (18 Ga.) jamb anchors are used to add support for bolting the frame into the rough opening of an existing wall.
   - Wood Stud Walls: Lock-in (18 Ga.) jamb anchors are designed to be attached to the wood studs of a rough opening.
   - Steel Stud Walls: Lock-in (18 Ga.) jamb anchors are designed to be attached to the webbing of the closed steel studs which are built around the frame.
   - Universal Stud Wall Anchors: Universal lock-in (18 Ga.) jamb anchors are designed for use in either wood or steel stud wall applications. Maximum jamb depth is 9 1/2".

3. Adjustable Base Anchors:
   - Field attached (16 Ga.) base anchors provides direct attachment and adjustability for out of level base surface conditions.
   - If frame is NOT to be set directly on the floor (slab) adjust base anchor UPWARD as required.

4. Special Frame Anchors: Anchor details and availability of lock-in anchors will vary with the following frame profile changes:
   - Single Rabbet: all details will vary.
   - Double Rabbet: weld-in anchors required over 9 1/2" jamb depth.
   - FE and DE Series Double Egress Frames: Anchor details will vary due to frame and application conditions.

5. Installation shall conform to the published Steelcraft installation instructions, ANSI A250.11 Recommended Erection Instructions for Steel Frames, and HMMA 84.

6. Installation Caution Notice: Grouted Frames:
   - When temperature conditions necessitate an additive to be used in the plaster or mortar to prevent freezing, the contractor installing the frames must coat the inside of the frames in the field with a corrosion resistant coating per ANSI A250.11 Recommended Erection Instructions for Steel Frames.
   - When frames are to be grouted full, silencers must be field installed prior to grouting.
   - Steel frames, including fire rated frames, do not require grouting. Grouting is not recommended for frames in drywall.

7. All Fire Rated frames must be installed in accordance with NFPA Pamphlet 80 and the Authority Having Jurisdiction.
Standard Lock-In Jamb Anchors are supplied on standard F Series frames having 2" faces.

Masonry Wall Application

- Masonry wall applications
  - Wire Masonry Anchor
  - Masonry “T” Anchor
  - Existing Wall Anchor

Stud wall applications

- Universal Stud Anchor
- Lock-In Anchor
- Anchor for Steel Stud Partition
- Anchor for Wood Stud Partition
- Lock-In Anchor

Adjustable Sill Anchors are provided as standard.

Anchor Quantities:
- 3 per jamb through 7’ 6” height
- 4 per jamb over 7’ 6” to 12’ 0” height
- 1 adjustable base anchor per jamb

Anchor Locations:
- Locate all anchors on hinge jamb as close to top of hinge reinforcement as possible.
- Locate anchors on strike jamb in the corresponding position as the hinge jamb.

Specialty Weld-In Jamb Anchors are supplied for custom frames and special wall applications when specified.

- Masonry wall application
- Stud wall anchors
- Sill anchors

Attached with S.M. screws furnished.

Maximum adjustment
1-3/8” (35mm) below bottom of frame.
DW and K Series drywall frames

Anchoring and installation notes

1. **Drywall Frames** are supplied standard with field adjustable compression anchors in each jamb and adjustable base anchors. DW Series Frames are designed especially for use in installations using wall baseboards.

2. **Anchoring Applications:**
   - **Masonry Wall:** Not recommended.
   - **Wood and Steel Stud Walls:** Adjustable compression anchors are factory located near the top of each jamb. These anchors can be easily adjusted with either a screwdriver or power driver. Adjustable lock-in base anchors are provided for attachment directly to the wall floor (sill) runner.
   - **Optional Security Anchor:** Security Stud Anchors are recommended in frames over 8’ 0” (2438 mm) high or in frames installed in areas where security is a priority. Locate the Security Stud Anchor immediately above or below the strike reinforcements, and on both faces (secure and entrance sides) of the jamb. Security Stud Anchors may be used in both the strike and hinge jambs. They are also recommended to be used in the head of frames for pairs of doors.

3. **Grouting of the DW and K Series Frames** is not recommended.

4. **Installation** shall conform to the published Steelcraft installation instructions, ANSI A250.11 Recommended Erection instructions for Steel Frames, and HMMA 840.

5. **Installation Caution Notice:**
   - After the frame pieces have been installed over the wallboard, the frame is squared by adjusting the compression anchor screws located in the soffit of the jambs. Turning the screw in a clockwise direction will tighten the frame.
   - **DO NOT** over tighten the compression anchors.
   - Check to insure the opening is plumb.

6. All Fire Rated frames must be installed in accordance with NFPA Pamphlet 80 and the Authority Having Jurisdiction.
Anchor Quantities:
- 1 compression anchor per jamb through 9” depth
- 2 compression anchors per jamb for 9” depth and greater
- 2 twist-in strap base anchors per jamb

Anchor Locations:
- Compression anchors are factory installed near the top of each jamb.
- The twist-in anchors are installed into the Base Anchor Attaching Strap that is factory installed at the bottom of each jamb.

Anchor Options:
- Security Jamb Anchor
  - See description on the previous page
  - See details on Page 93

### Closed steel stud

**Material**: 18 Ga. Galvannealed Steel  
**Supplied**: Shipped loose for field installation  
**Applicable Frame Series**: F  
**Profile variations**: DR: Double Rabbet (equal & unequal)  
**Frame depths**: 4 ¾", 5 ¾", 6 ¾", 7 ¾", 8 ¾"  
**Face variations**: 2" only  
**Frame attachment**: Lock-in  
**Application**: Ship loose to jobsite, field installed  
**Wall construction**: Closed steel stud walls  
**Fire label applications**: UL/WH 3 hour max.  
**Base anchor**: See page 92 for base anchor details.

### Flush steel stud

**Material**: 18 Ga. Galvannealed Steel  
**Supplied**: Welded in prior to shipment  
**Applicable Frame Series**: F, FN, MU, FE, DE, C  
**Profile variations**: SR: Single Rabbet  
**Frame depths**: All frame depths  
**Face variations**: Fits all face variations  
**Frame attachment**: Must be welded to frame  
**Application**: Arrives at jobsite welded into frame  
**Wall construction**: Closed steel stud walls  
**Fire label applications**: UL/WH 3 hour max.  
**Base anchor**: See page 92 for base anchor details.

### Recessed steel stud

**Material**: 16 Ga. Galvannealed Steel  
**Supplied**: Welded in prior to shipment  
**Applicable Frame Series**: F, FN, MU, FE, DE, C  
**Profile variations**: SR: Single Rabbet  
**Frame depths**: All frame depths  
**Face variations**: Fits all face variations, ordered specifically to fit face  
**Frame attachment**: Must be welded to frame  
**Application**: Arrives at jobsite welded into frame  
**Wall construction**: Closed steel stud walls  
**Fire label applications**: UL/WH 3 hour max.  
**Base anchor**: See page 92 for base anchor details.
### Field adjustable base

- **Material**: 16 Ga. Galvannealed Steel
- **Supplied**: Shipped loose for field installation
- **Applicable Frame Series**: F, MU
- **Profile variations**: DR: Double Rabbet (equal & unequal)
- **Frame depths**: All frame depths
- **Face variations**: Fits all face variations
- **Frame attachment**: Retaining clip is factory welded into each jamb. Adjustable anchor is field attached and adjusted during installation.
- **Application**: Anchor angle ship loose to jobsite, field attached and adjusted. Adjustable base anchors are manufactured to fit the frame profile, depth and profile variations which must be specified when ordering this anchor.
- **Wall construction**: Masonry block or brick, steel stud
- **Fire label applications**: UL/WH 3 hour max.

### Fixed base

- **Material**: 16 Ga. Galvannealed Steel
- **Supplied**: Welded in prior to shipment
- **Applicable Frame Series**: F, FN, MU, FE, DE
- **Profile variations**: SR: Single Rabbet, DR: Double Rabbet (equal & unequal), CO: Cased Open
- **Frame depths**: All frame depths
- **Face variations**: Fits all face variations
- **Frame attachment**: Must be welded to frame
- **Application**: Arrives at jobsite welded into frame
- **Wall construction**: Masonry block or brick, steel stud
- **Fire label applications**: UL/WH 3 hour max.

### Compression jamb

- **Material**: 16 Ga. Galvannealed Steel
- **Supplied**: Factory welded in prior to shipment
- **Applicable Frame Series**: DW, K
- **Profile variations**: SR: Single Rabbet, DR: Double Rabbet (equal & unequal), CO: Cased Open
- **Frame depths**: All DW & K frame depths
- **Face variations**: 2" face only
- **Frame attachment**: Must be welded to frame
- **Application**: Arrives at jobsite welded into frame
- **Wall construction**: Wood or steel stud walls
- **Fire label applications**: UL/WH 1 1/2 hour max.
- **Base anchor**: See page 94 for sill anchor details
Security anchor (optional) for DW and K Series

Security anchor is field installed in the strike jamb directly above or below the strike preparation.

- **Material**: 16 Ga. Galvannealed Steel
- **Supplied**: Shipped loose for field installation
- **Applicable Frame Series**: F Series Hollow Metal Mullions
- **Profile variations**: SR: Single Rabbet, DR: Double Rabbet (equal & unequal)
- **Frame depths**: All frame depths
- **Face variations**: Ordered specifically to fit face
- **Frame attachment**: Anchor to floor, mullion slides over
- **Application**: Ship loose to jobsite, field installed
- **Floor construction**: All
- **Fire label applications**: UL/WH 3 hour max.

### Sill section base

- **Material**: 16 Ga. Galvannealed Steel
- **Supplied**: Shipped loose for field installation
- **Applicable Frame Series**: F, FN
- **Profile variations**: SR: Single Rabbet, DR: Double Rabbet (equal & unequal)
- **Frame depths**: All frame depths
- **Face variations**: Fits all pace variations
- **Frame attachment**: Anchor to floor, sill snaps on top
- **Application**: Ship loose to jobsite, field installed
- **Floor construction**: All
- **Fire label applications**: UL/WH 3 hour max.

### Corner post base

- **Material**: 12 Ga. Galvanized Steel
- **Supplied**: Shipped loose for field installation
- **Applicable Frame Series**: Corner posts
- **Profile variations**: DR: Double Rabbet (equal & unequal)
- **Frame depths**: All frame depths
- **Face variations**: Ordered specifically to fit face
- **Frame attachment**: Attached to floor, corner post slides over
- **Application**: Ship loose to jobsite, field installed
- **Floor construction**: All
- **Fire label applications**: UL/WH Approved

General door information

Steelcraft full flush doors are designed for virtually all construction requirements in commercial building applications. Their construction, durability and flexibility have been proven throughout the world in both operation and physical testing of all types.

Full flush door construction

- **Laminated (L and SL Series):** Honeycomb core doors are designed for installation in all types of building construction, for both interior and exterior applications. The continuously bonded cores and full height mechanically interlocked edge seams provide attractive, flat and very durable doors to the commercial construction industry. Many options are available in this product Series including edge construction and core variations.

- **Steel Stiffened (B Series):** These internally steel stiffened core doors are designed for installation in all types of building construction, for both interior and exterior applications. The internal steel stiffeners are welded to the face sheets. The full height mechanically interlocked edge seams provide attractive and very durable doors to the commercial construction industry. Edge construction options are available.

- **Embossed (CE Series):** The 2, 6, and 8 panel embossed doors, with a polystyrene core, are designed for installation in all types of building construction for both interior and exterior applications. The crispy and deeply embossed panels create the appearance of hand carved doors. The continuously bonded cores and full height mechanically interlocked edge seams provide attractive, flat and very durable doors to the commercial construction industry.

- **Temperature Rise (T Series):** T Series doors are equipped with a mineral core and are designed for use in locations requiring a temperature rise rating. The use of this door series is usually dictated by the local building code. Steelcraft T Series doors carry a 250°F (121°C) temperature rise Listing. Edge construction options are available.

Full glass entrance door construction

The A14 Series doors are specifically designed for entrances and applications requiring full glass designs. They are an attractive and very durable alternative to aluminum entrance doors.

Sizes and performance

All doors are manufactured and supplied to meet the dimensional standards and performance levels as published in ANSI A250.8-2017 (SDI 100).

Special size products are available to meet the unique construction, performance and aesthetic requirements of the architectural community. Contact Steelcraft for those requirements.

Usage and application

To help simplify the use, selection and specification of Steelcraft door products, the following guidelines for base material selection can be used:

- **Material Gauge:**
  - **20 Gauge [0.032” (0.8 mm)]:** for Light Commercial applications with minimal use and abuse.
  - **18 Gauge [0.042” (1.0 mm)]:** for Heavy Commercial and Institutional applications with high use.
  - **16 Gauge [0.053” (1.3 mm)]:** for Extra Heavy Commercial and Institutional applications having the potential of very high use.
  - **14 Gauge [0.067” (1.7 mm)]:** for Extra Heavy Commercial and Institutional applications with extremely high use.

Material Selection: in addition to the thickness of base material, the following base material types of metal are available from Steelcraft:

- **Cold Rolled Steel (CRS):** conforming to ASTM A1008 and ASTM A568 recommended for interior opening with normal humidity exposure.
- **Hot-Dip Galvannealed Steel:** conforming to ASTM A924 and ASTM A653 recommended for exterior opening or interior openings with high humidity.
- **GRAINTECH™ woodgrain embossment:** conforming to ASTM A924 and ASTM A653, available in 18 or 16 gauge steel, limited to series L, CE, T.

**Note:** For recommendations on material and door types, refer to the product specification tables in the Architectural section of this manual. For recommendations on material and door types, refer to the product specification tables in the Architectural section of this manual.

Installation

Installation of all Steelcraft frames and doors shall conform to the published Steelcraft installation instructions, ANSI A250.11-2012 (formerly SDI 105) Recommended Erection Instructions for Steel Frames and HMMA B40.

All Fire Rated doors must be installed and maintained in accordance with the National Fire Protection Association Pamphlet 80, and/or the local Authority Having Jurisdiction.

Job site storage

Store doors under cover, in a dry area and in an upright position. All ferrous metal products should be stored where they will not be exposed to, or come in contact with water. This is particularly true of products such as doors, which have large flat surfaces on which water may collect if they are stacked horizontally. Only use vented plastic or canvas. The use of no-vented materials, create a humidity chamber, which promotes blistering and corrosion. Place no more than 5 doors in a group, with all material on planking or blocking at least 4 in. (100 mm) off the ground, 2 in. (50 mm) off a paved area or the floor slab. Provide a least ¼ in. (6.4 mm) space (wood strip) between all units to permit air circulation.
Construction notes

1. **Doors** are 1 ¾" (45 mm) thick.

2. **Hardware Preparations:** to meet specifications, doors can be prepared for all commercial mortised hardware, and can be factory reinforced for surface applied hardware applications.

3. **Top and bottom edges** of all doors are closed with 14 gauge [0.067” (1.7 mm)] welded channels. Exterior applications require the addition of top caps to protect against weather infiltration.

4. **Optional edge seams** are prepared prior to the application of factory, baked-on primer paint.

5. **Standard hardware preparations,** mortised and reinforced for the following:
   - **Universal Hinge Preps:** 4 ½" (114 mm) patented preparation which allows for easy and quick field conversion from standard weight .134” (3.3 mm) to heavy weight .180” (4.5 mm) hinges.
   - **Locks:** a multitude of standard lock preps are available. The most commonly used with a 4 7⁄8” (124 mm) strike are 161, 61L and 86.

6. **Glass Lights with Dezigner® Trim:** for doors with glazed cutouts, see the Lights and Louvers section of this Manual.

7. **Louvers:** for doors with attached louvers, see the Lights and Louvers section of this Manual.

---

**Single door application**

- **Top (at the Head) = ⅛” (3 mm) to bottom of head or transom panel;**
- **Bottom (at the Floor) = ¾” (19 mm) to bottom of frame.**
- **Hinge Side = ⅜” (2 mm) to rabbet or jamb;**
- **Lock Side = ⅜” (2 mm) to rabbet or jamb;**
- **SL and SZ series square edge door Hinge side and Lock side clearances are ⅛” (3 mm) to rabbet or jamb.**
Double door application

Both leaves of double door elevations employ the same construction features as single swing and could include an optional overlapping astragal.

Meeting Edges
- A 14 gauge [0.067" (1.7 mm)] "Z" astragal is furnished loose for installation in the field by others.
- Overlapping astragal kits are available to convert an active leaf to an inactive leaf.
- When an astragal is not used, the width of the inactive leaf is increased \( \frac{3}{5}'' \) (2 mm) when specified.

Hardware Preparations: the inactive leaf can be prepared for hardware as specified.

Standard Operating Clearances (installed in frame)
- Head = \( \frac{1}{8}'' \) (3 mm) to bottom of head or transom panel.
- Hinge Side = \( \frac{3}{5}'' \) (2 mm) to rabbet on jamb.
- Meeting Edges = \( \frac{3}{5}'' \) (2 mm) with or without astragal.
- For openings without an astragal, a wide inactive leaf is used.
- Bottom = \( \frac{3}{4}'' \) (19 mm) to bottom of frame.

Meeting edge details
Refer to pages 143 - 150 for all standard astragal applications.
L Series

About the product
The L20, L18, and L16 Series flush doors are designed to meet the architectural requirements for full flush doors. The L14 Series flush doors are designed to meet the architectural requirements for maximum duty full flush doors. Refer to the Architectural section for specifications and the selection and usage guide of the appropriate door constructions.

This premium door construction combines the strength and dimensional stability of steel with the structural integrity of the laminate core. The continuous bonding of core to steel face sheets provides an attractive, flat door, free of face welding marks. Tests have proven that the L Series door has high resistance to impact damage, low thermal conductivity and high STC ratings.

To meet application, specification and performance requirements, the L Series door offers a wide range of specifiable options including sizes, glass light designs and hardware (mechanical, pneumatic, electrical) preparations.

L Series doors are 1 ¾" (45 mm) thick.

Installation
1. Installation shall conform to the published Steelcraft installation instructions, ANSI A250.11-2012 (formerly SDI 105) Recommended Erection Instructions for Steel Frames and HMMA B40s.

2. Fire Rated Assemblies must be in accordance with NFPA Pamphlet 80. The Authority Having Jurisdiction is the final authority on issues related to the installation and use of installed Fire Rated Doors.

Features and benefits
Steelcraft’s L Series doors offer the following standard unique features, which enhance long term performance and durability:

1. Core Systems that enhance the structural integrity of the door:
   - Honeycomb (standard): 1" (25 mm) cell kraft honeycomb configuration that increases structural integrity while reducing overall weight
   - Polystyrene (optional): enhanced thermal performance
   - Polyurethane (optional): extreme thermal performance

2. Full Height, Epoxy Filled Mechanical Interlock Edges provide structural support and stability the full height of the door edges. Available edge options:
   - Visible Edge Seam (standard): full height, epoxy filled mechanical Interlocked edges
   - Filled Edge Seam (optional add to standard): seam filled with structural adhesive and dressed smooth. Includes tack welds above and below edge cutouts for hinges, locks, etc.
   - Welded Edge Seam (optional add to standard): intermittently welded using 1" long welds, then seam filled with structural adhesive and dressed smooth. Option available on L18, L16 and L14 doors.

3. Universal Hinge Preparations (patented) allow for easy field conversion from standard weight .134" (3.3 mm) hinges to heavy weight .180" (4.7 mm) hinges.

4. 14 Gauge [0.067" (1.7 mm)] Inverted Top and Bottom Channels provide stability and protection for the top and bottom edges from abuse.

5. Beveled Hinge and Lock Edges allow for tighter installation tolerances, ensure easier operation and eliminate binding and sticking.

6. Recessed Dezigner™ Glass Trim provides a clean, neat and flush finish with the door surface.

Specification compliance
1. Door construction for Steelcraft L Series full flush doors meets the requirements of ANSI A250.8-2017 (SDI 100).

2. Hardware preparations and reinforcements are in accordance with ANSI A250.6-2003 (R2009). Locations are in accordance with ANSI/DHI A115 unless otherwise stated.

Fire ratings
L Series doors meet the broadest fire rating requirements. They are listed for installations requiring compliance to both neutral pressure testing (ASTM E152 and UL-10B) and positive pressure standards (UL-10C).
Rigid Honeycomb

Standard Laminated Honeycomb Core
- 1" (25 mm) cell, 99 pound Kraft honeycomb
- Honeycomb surfaces sanded for maximum adhesion
- Impregnated with phenolic resin (resists mildew and vermin)
- Laminated to both face sheets with contact adhesive
- Assembled door is run through high pressure pinch rollers, achieving ultimate bond

Optional cores are polystyrene or polyurethane

Optional Polystyrene Core
- 1 pound (453.6g) per ft³ density slab
- Laminated to both face sheets with contact adhesive
- Labeled applications

Optional Polyurethane Core
- 1.8 pound (816.5g) per ft³ density slab
- Laminated to both face sheets with contact adhesive
- Non-Labeled applications

Standard Premium Edge Construction
- Beveled hinge & lock edges
- Full height mechanical interlock with epoxy adhesive
- Visible edge seam standard
- Seamless edge optional

Standard Rigid 14 Gauge End Channel Construction
- 14 gauge inverted galvannealed top & bottom channels
- Projection welded to both face sheets
- For optional caps, see "Weather seals" on page 151.

Standard hardware preparations

Typical hardware applications shown. Refer to "Hardware" section for more details.

Standard: mortised and reinforced for:

- Patented Universal hinge preparations allow for easy field conversion from standard 4 1/2" (114 mm) x .134" (3.3 mm) standard weight hinges to 4 1/2" (114 mm) x .180" (4.7 mm) heavy weight hinges. Optional hinge preparation for 5" (127 mm) x .146" (3.7 mm) standard weight hinges or for 5" (127 mm) x .190" (4.8 mm) heavy weight hinges is also available.
- A multitude of standard lock preparations are available. The cylindrical 161, 61L and mortise 86 lock preps are the most commonly used active leaf preparations. The 4 7/8" (124 mm) strike prep is the most commonly used inactive leaf preparation.
- Optional reinforcements for surface and concealed Closers are available.
- Special hardware applications are available.

Door Sizes and ANSI A250.8 Conversions

Steelcraft product selection for L Series doors has been matched to ANSI/SDI Level and Model designations.

- In accordance with ANSI A250.8-2017 (SDI 100), core material is not specific to the level or model designations. Core material selection is specified based on preference and application.
- Recommended minimum frame gauge also applies to the frequency of operation of the opening.

Doors • L Series

Door edge construction

Optional Edge Seams available in the L Series doors:
• L: Standard feature includes visible edge seams with full height interlocked edges.
• LF: the mechanical edge seam is filled and dressed smooth prior to applying the factory primer.
• LW: the mechanical edge seam is welded and dressed smooth prior to applying the factory primer.

Standard visible edge seam

L Series visible seam features
• Full height mechanical interlock
• Interlock filled with epoxy adhesive
• Visible edge seam

Optional seamless edge

LF Series Seam Filled Features
• Standard Visible Edge Seam is tack welded above and below edge cutouts for hinges, locks, etc.
• Edge Seam is then filled with structural adhesive and dressed smooth

LW Series Seam Welded Features
• Standard Visible Edge Seam is intermittently welded using 1" long welds
• Edge Seam is then filled with structural adhesive and dressed smooth
• No visible edge seam

Glass light options
(Refer to the Lights and Louvers section for further details and options)

Dezigner® Trim
• Standard for 1/4" Thick Glass
• Optional for 1/2" Thick Glass

Flush Mounted Steel Trim
• For 1" Thick Glass

Note: Glazing type and thickness vary per job requirements.

Note: Louver size and type vary per requirements.

Divider Muntins Are Not Available

Note: Glazing type and thickness vary per job requirements.

Note: Louver size and type vary per requirements.
关于产品

SL20和SL18系列方形边缘的无框门被设计为满足完整的无框门的建筑要求。参见第11节（建筑）以获取规格和所选和使用的门的具体信息。

这种门的构造将钢的强度和尺寸稳定性与层压板的结构完整性相结合。连续的层压板与钢面板的结合提供了具有吸引力的、平整的门，且无正面焊接的痕迹。

测试已经证明，所采用的构造具有良好的抗冲击性能，低热传导性以及高的STC评级。

为了满足应用、规格和性能要求，SL系列门提供了包括尺寸、玻璃轻的设计和硬件准备等选项。

SL系列门厚1 3/4”(45 mm)，具有方形边缘。

特点和好处

Steelcraft的SL系列门提供以下标准功能，增强性能和耐用性：
1. **核心系统**：增强门的结构完整性。
   - **蜂窝（标准）**：1”(25 mm)蜂窝状配置，增加结构完整性的同时减少整体重量。
   - **聚苯乙烯（可选）**：增强热性能。
2. **全高度环氧填充机械互联边缘**：提供结构支持和稳定性。
3. **标准铰链准备**：适用于1 3/2”(114 mm) x .134”(3.3 mm)标准重量或.180”(4.7 mm)重型铰链。
4. **14 Gauge [0.067”(1.7 mm)] 倒装顶部和底部槽**：提供顶部和底部边缘的稳定性和保护。
5. **方形铰链和锁边缘**：用于非手边的库存控制。
6. **凹陷Dezigner™玻璃条**：提供干净、整洁和无框的完成。
7. **工厂施涂防锈涂层**：依据ANSI A250.10-2011。

规格一致性

1. 门构建满足ANSI A250.8-2017(SDI 100)的要求。
2. 硬件准备和加固符合ANSI A250.6-2003(R2009)。位置符合ANSI/DHI A115，除非另有说明。

防火等级

SL系列门符合最宽泛的防火等级要求。它们适用于同时符合中立压力测试(ASTM E152和UL-10B)和正向压力标准(UL-10C)的安装。

安装

1. 安装应遵守Steelcraft安装手册，ANSI A250.11-2012（SDI 105）《Steel Frames and HMMA 840》推荐的安装手册。
2. 防火等级集必须依据NFPA小册子80。《权威管辖权》是最终有关安装和使用防火等级门的权限。

Door edge construction

Optional Edge Seams available in the SL Series doors:
- **SL**: Standard feature includes visible edge seams with full height interlocked edges.

**Standard visible edge seam**

**Features**
- Full height mechanical interlock
- Interlock filled with epoxy adhesive
- Visible edge seam

Glass light options

Refer to the Lights and Louvers section for further details.

**Dezigner® Trim**
- Standard for 1/4" Thick Glass
- Optional for 1/2" Thick Glass

**Note:** Glazing type and thickness vary per job requirements.

**Note:** Louver size and type vary per requirements.
Falcon SZ Series

About the product

The SZ Series **Square Edge** flush doors are designed to meet requirements for commercial quality full flush steel doors. This commercial door construction combines both the rigid construction and dimensional stability of steel with the integrity of the laminate core. The continuous bonding of the core to steel face sheets provides an attractive, flat door, free of face welding marks.

**Recommended area for use:**
The SZ Series flush doors are recommended for commercial applications which are not required to comply with architectural specifications. This product is targeted at Distributor over the counter sales with walk-in Contractor trades requiring stock opening sizes and basic hardware configurations.

Typically, the SZ Series door is applicable to the following commercial applications:
- Storage Room & closets.
- Retail entrance and back doors.
- Economy Hotel and Motel unit entrances.

Falcon SZ Series doors are 1 3⁄4" (45 mm) thick, with **Square Edges**.

**Features and benefits**

Steelcraft’s SZ Series doors offer the following standard features:

1. **Core Systems** that enhance the performance of the door:
   - **Honeycomb (standard)**: 1" (25 mm) cell Kraft honeycomb.
   - **Polystyrene (optional)**: enhanced thermal performance.

2. **18 gauge Face Sheets**
3. **Full Height, Epoxy Filled Mechanical Interlock Edges** provide structural support and stability the full height of the door edges.

4. **Non-Handed for 4 1⁄2" (114 mm) Hinge Preparations** (.134") weight hinges (includes spacer plates which can be modified at install to accommodate heavyweight hinges).

5. **14 Gauge Inverted Top and Bottom Channels** provide stability and protection for the top and bottom edges from abuse.

6. **Closer Reinforcement** 14 Gauge minimum on all doors.
7. **Square Hinge and Lock Edges** for non-handed inventory control for local distribution.
8. **Factory Applied Rust Inhibiting Primer**

**Specification compliance**

9. Door construction for Steelcraft’s Falcon SZ Series doors meets the requirements of ANSI A250.8-2017 (SDI 100).

10. Hardware preparations and reinforcements are in accordance with ANSI A250.6-2003 (R2009). Locations are in accordance with ANSI/DHI A115 unless otherwise stated.

**Fire ratings**

Falcon SZ Series doors are listed for installations requiring compliance to negative pressure testing (ASTM E152 and UL-10B) and positive pressure standards (UL-10C).
- Doors are factory labeled with a Warnock Hersey 1 1⁄2 Hour (90 min) Mylar label.

**Options**
The Falcon SZ Series door sizing and option configurations are available only as noted in this TD Sheet or on the related Price Book pages. Commonly available configuration options are not available on the Falcon SZ Series doors including the options listed below.

- Factory installed glass lights.
- Factory cutouts for louver or glass lights.
- Hardware preparations or reinforcements other than those outlined in this TD Sheet or the related Price Pages.
- If configuration options are required, refer to the SL or L Series products.
**Door construction**

1. Vertical edges (both hinge and lock) are square with a visible, epoxy filled mechanical interlock edge seam.

2. Top and bottom edges are closed with inverted 1/4 gauge top and bottom channels (top cap not included, see ‘Parts’).

3. Doors are 1 3/4” (45 mm) thick.

**Available: Mortised and reinforced:**

- Template hinge preparations for 4 1/2” (114 mm) x .134” (3.3 mm) standard weight hinges. Butt hinge preparations are cut through for non-handed function; spacer plates are furnished for field installation and handing.

- Lock preparations for mortise and cylindrical locks follow ANSI A115.1 for mortise preparations and A115.2 for cylindrical.

- Rim Exit Device preparation is reinforced on both hinge and lock side and located at 39 9/16” from bottom of door to center line of reinforcing.

**Standard Core: Rigid Honeycomb**

- 1” (25 mm) cell, 99 pound Kraft honeycomb
- Honeycomb surfaces sanded for maximum adhesion
- Impregnated with phenolic resin (resists mildew and vermin)
- Laminated to both face sheets with contact adhesive
- Assembled door is run through high pressure pinch rollers, achieving ultimate bond

**Optional Core: Polystyrene Core**

- 1lb (433.6g) per ft³ density slab.
- Laminated to both face sheets with contact adhesive.
- Assembled door is run through high pressure pinch rollers, achieving ultimate bond.

**Door application and usage**

**Door Sizes and ANSI A250.8 Conversions**

Steelcraft product selection for Falcon SZ Series doors has been matched to ANSI/SDI Level and Model designations.

- In accordance with ANSI A250.8-2017 (SDI 100), core material is not specific to the level or model designations. Core material selection is specified based on preference and application.

- Recommended minimum frame gauge also applies to the frequency of operation of the opening.

**Note:** The Falcon SZ Series must be ordered in single leaf configurations. An 86ED lock prep allows a distributor to supply a pair of doors with the appropriate Z Astragal.
B Series

About the product
Steelcraft B18, B16, and B14 Series flush doors are designed to meet the architectural requirements for full flush, steel stiffened doors. The door face sheets are supported by the internal steel stiffeners, which extend the full door width. The stiffeners are welded to (1) face sheet and bonded to the opposite panel. The B Series Door offers a wide range of specifiable options including sizes, glass light designs, optional edge constructions and hardware (mechanical, pneumatic, electrical) preparations.

B Series doors are 1 3⁄4” (45 mm) thick.

THE USE OF HIGH GLOSS PAINT IS NOT RECOMMENDED.
High gloss paint accentuates the visibility of all welds.

Installation
1. Installation shall conform to the published Steelcraft installation instructions, ANSI A250.11-2012 (formerly SDI 105) Recommended Erection Instructions for Steel Frames and HMMA 840.
2. Fire Rated Assemblies must be in accordance with NFPA Pamphlet 80. The Authority Having Jurisdiction is the final authority on issues related to the installation and use of installed Fire Rated Doors.
3. See Sound Openings section on page 243 for optional B-Door construction.

Note 1: For optional B-Door construction with STC-Stiffened Core, see SPECIALTY PRODUCTS: SOUND OPENINGS section page 243.

Features and benefits
Steelcraft’s B Series doors offer the following standard unique features, which enhance long term performance and durability:

1. Steel Stiffened core construction with welded 20 gauge hat section stiffeners.
2. Full Height, Epoxy Filled Mechanical Interlock Edges provide structural support and stability the full height of the door edges. Available edge options:
   - Visible Edge Seam (standard): full height, epoxy filled mechanical interlocked edges
   - Filled Edge Seam (optional add to standard): seam filled with structural adhesive and dressed smooth. Includes tack welds above and below edge cutouts for hinges, locks, etc.
   - Welded Edge Seam (optional add to standard): intermittently welded using 1” long welds, then seam filled with structural adhesive and dressed smooth. Option available on B18, B16 and B14 doors.
3. Universal Hinge Preparations (patented) allow for easy field conversion from standard weight .134” (3.3 mm) hinges to heavy weight .180” (4.7 mm) hinges.
4. Beveled Hinge and Lock Edges allow for tighter installation tolerances, ensure easier operation and eliminate binding and sticking.
5. Recessed Dezigner™ Glass Trim provides a clean, neat and flush finish with the door surface.

Specification compliance
1. Door construction for Steelcraft B Series full flush doors meets the requirements of ANSI A250.8-2017 (SDI 100).
2. Hardware preparations and reinforcements are in accordance with ANSI A250.6-2003 (R2009). Locations are in accordance with ANSI/DHI A115 unless otherwise stated.

Fire ratings
B Series doors meet the broadest fire rating requirements. They are listed for installations requiring compliance to both neutral pressure testing (ASTM E152 and UL-10B) and positive pressure standards (UL-10C).
Core construction

Steel Stiffeners with Fiberglass Insulation

- 20 Ga. Stiffener
- Stiffeners welded to inside of (1) face sheet and bonded to the opposite face
  - Vertical interior webs located 6” (152 mm) apart
  - Weld spacing 5” (152 mm) on center along the full height of each stiffener
- Stiffener height extends full height of door thickness
- Areas between stiffeners filled with nominal 1 pound (453.6g) per ft³ density fiberglass batt insulation
- For optional B-Door construction with STC-Stiffened Core, see SPECIALTY PRODUCTS: SOUND OPENINGS on page 245.

Standard B Series Core
- 20 gauge stiffeners
- Beveled hinge & lock edges
- Full height mechanical interlock with epoxy adhesive
- Visible edge seam standard
- Seamless edge optional

Standard Premium Edge Construction

- Sealed edge standard
- Seamed edge optional

Standard Rigid 14 Gauge End Channel Construction
- 14 gauge inverted galvannealed top & bottom channels
- Projection welded to both face sheets
- For optional caps, see "Weather seals" on page 151.

Standard hardware preparations
Typical hardware applications shown. Refer to "Hardware" section for more details.

Standard: mortised and reinforced for:
- Patented Universal hinge preparations allow for easy field conversion from standard 4 1/2" x .134" standard weight hinges to 4 1/2" x .180" heavy weight hinges. Optional hinge preparation for 5" x .146" standard weight hinges or for 5" (127 mm) x .190" (4.8 mm) heavy weight hinges is also available.
- The cylindrical 161, 61L and mortise 86 lock preps are the most commonly used active leaf preparations. The 4 7/8" (124 mm) strike prep is the most commonly used inactive leaf preparation.
- Optional reinforcements for surface and concealed Closers are available.
- Special hardware applications are available.

Door Sizes and ANSI A250.8 Conversions

Door edge construction
- Vertical edges (both hinge and lock) are beveled \(\frac{1}{8}\)" (3.2 mm) in 2" (51 mm) with a visible seam.
- Top and bottom edges are closed with inverted 14 gauge [0.067" (1.7 mm)] welded channels. Exterior applications require the addition of top caps to protect against the weather
- Optional Edge Seams available in the B Series doors:
  - **BF**: the mechanical edge seam is filled and dressed smooth prior to applying the factory primer.
  - **BW**: the mechanical edge seam is welded and dressed smooth prior to applying the factory primer.

Standard visible edge seam
**B Series Visible Seam Features**
- Full height mechanical interlock
- Interlock filled with epoxy adhesive
- Visible edge seam

Optional seamless edge
**BF Series Seam Filled Features**
- Standard Visible Edge Seam is tack welded above and below edge cutouts for hinges, locks, etc.
- Edge Seam is then filled with structural adhesive and dressed smooth
- No visible edge seam

**BW Series Seam Welded Features**
- Standard Visible Edge Seam is intermittently welded using 1" long welds
- Edge Seam is then filled with structural adhesive and dressed smooth
- No visible edge seam

Glass light options
(Refer to the Lights and Louvers section for further details)

**Dezigner® Trim**
- Standard for \(\frac{1}{4}\)" Thick Glass
- Optional for \(\frac{1}{2}\)" Thick Glass

**Flush Mounted Steel Trim**
- For 1" Thick Glass

Note: Glass light options and frame variations vary per job requirements.

Divider Muntins Are Not Available
T Series

About the product
Steelcraft T20, T18, T16, and T14 Series flush doors are designed to meet the architectural requirements for Temperature Rise rated full flush doors. Refer to the Architectural section for specifications and the selection and usage guide of the appropriate door constructions. To meet application, specification and performance requirements, the T Series door offers a wide range of specifiable options including sizes, glass light designs, optional edge constructions and hardware (mechanical, pneumatic, electrical) preparations.

T Series doors are 1 3/4" (45 mm) thick.

Installation
1. Installation shall conform to the published Steelcraft installation instructions, ANSI A250.11-2012 (formerly SDI 105) Recommended Erection Instructions for Steel Frames and HMMA B40.
2. Fire Rated Assemblies must be in accordance with NFPA Pamphlet 80. The Authority Having Jurisdiction is the final authority on issues related to the installation and use of installed Fire Rated Doors.

Features and benefits
Steelcraft’s T Series doors offer the following standard unique features, which enhance long term performance and durability:

1. **Mineral board core** provides a 250°F (121°C) Temperature Rise rating or 450°C (232°C) at 30 minutes of test exposure, depending on hardware application.

2. **Full Height, Epoxy Filled Mechanical Interlock Edges** provide structural support and stability the full height of the door edges. Available edge options:
   - **Visible Edge Seam** (standard): full height, epoxy filled mechanical interlocked edges with tack welds
   - **Filled Edge Seam** (optional add to standard): seam filled with structural adhesive and dressed smooth.
   - **Welded Edge Seam** (optional add to standard): intermittently welded using 1" long welds, then seam filled with structural adhesive and dressed smooth. Option available on T18, T16 and T14.

3. **Universal Hinge Preparations** (patented) allow for easy field conversion from standard weight .134" (3.3 mm) hinges to heavy weight .180" (4.7 mm) hinges.

4. **14 Gauge [0.067" (1.7 mm)] Inverted Top and Bottom Channels** provide stability and protection for the top and bottom edges from abuse.

5. **Recessed Dezigner™ Glass Trim** provides a clean, neat and flush finish with the door surface.

Specification compliance
1. Door construction for Steelcraft T Series full flush doors meets the requirements of ANSI A250.8-2017 (SDI 100).
2. Hardware preparations and reinforcements are in accordance with ANSI A250.6-2003 (R2009). Locations are in accordance with ANSI/DHI A115 unless otherwise stated.

Fire ratings
T Series doors meet the broadest fire rating requirements. They are listed for installations requiring compliance to both neutral pressure testing (ASTM E152 and UL-10B) and positive pressure standards (UL-10C).
Core construction

Standard T Series Core
- Mineral Fiber board core
  - 250°F (121°C) Temperature Rise rating
    - single point locks
    - exit hardware
  - 450°F (218°C) Temperature Rise rating
    - single point locks
    - exit hardware
    - doors prepared for INPACT™ exit devices
    - pairs of doors with two (2) vertical rod exit devices (without astragal)
  - Fire label ratings up to 3 hours
  - Laminated to inside faces of both door panels with contact adhesive

Standard Premium Edge Construction
- Beveled hinge & lock edges
- Full height mechanical interlock with epoxy adhesive
- Visible edge seam standard, with tack welds above and below edge cutouts for hinges, locks, etc.
- Seamless edge optional

Standard Rigid 14 Gauge End Channel Construction
- 14 gauge inverted galvannealed top & bottom channels
- Projection welded to both face sheets
- For optional caps, see "Weather seals" on page 141.

CE Series

About the product
The CE, HD2, and HD2A Series embossed panel doors are designed to meet the architectural requirements for embossed panel doors. The door construction combines the features and benefits of polystyrene core laminated construction. Refer Architectural section for specifications and the selection and usage guide of the appropriate door constructions.

This premium door construction combines the strength and dimensional stability of steel with the structural integrity of the laminate core. The continuous bonding of core to steel face sheets provides an attractive, flat door, free of face welding marks.

To meet application, specification and performance requirements, the CE Series embossed panel doors offer a wide range of specifiable options including sizes, glass light designs and hardware (mechanical, pneumatic, electrical) preparations.

CE Series doors are 1 ¾” (45 mm) thick.

Installation
1. Installation shall conform to the published Steelcraft installation instructions, ANSI A250.11-2012 (formerly SDI 105) Recommended Erection Instructions for Steel Frames and HMMA 840.
2. Fire Rated Assemblies must be in accordance with NFPA Pamphlet 80. The Authority Having Jurisdiction is the final authority on issues related to the installation and use of installed Fire Rated Doors.

Features and benefits
Steelcraft’s CE Series embossed panel doors offer the following standard unique features, which enhance long term performance and durability:

1. A-40 Galvannealed steel face sheets
2. Polystyrene Core provides enhanced thermal performance
3. Full Height, Epoxy Filled Mechanical Interlock Edges provide structural support and stability the full height of the door edges. Available edge options:
   • Visible Edge Seam (standard): full height, epoxy filled mechanical interlocked edges
   • Filled Edge Seam (optional add to standard): seam filled with structural adhesive and dressed smooth. Includes tack welds above and below edge cutouts for hinges, locks, etc.
4. Universal Hinge Preparations (patented) allow for easy field conversion from standard weight .134” (3.3 mm) hinges to heavy weight .180” (4.7 mm) hinges.
5. 14 Gauge [0.067” (1.7 mm)] Inverted Top and Bottom Channels provide stability and protection for the top and bottom edges from abuse.
6. Beveled Hinge and Lock Edges allow for tighter installation tolerances, ensure easier operation and eliminate binding and sticking.
7. Recessed Dezigner™ Glass Trim provides a clean, neat and flush finish with the door surface.

Specification compliance
1. Door construction for Steelcraft CE Series embossed panel doors meets the requirements of ANSI A250.8-2017 (SDI 100).
2. Hardware preparations and reinforcements are in accordance with ANSI A250.6-2003 (R2009). Locations are in accordance with ANSI/DHI A115 unless otherwise stated.
3. Door construction for the CE Series embossed panel doors meets ANSI A117.1-1998 (ADA) requirements for minimum 10” (254 mm) bottom rail height measured from the floor.

Fire ratings
CE Series embossed panel doors meet the broadest fire rating requirements. They are listed for installations requiring compliance to both neutral pressure testing (ASTM E152 and UL-10B) and positive pressure standards (UL-10C).
Laminated core

Standard CE Series Core

- 1 pound (453.6g) per ft$^3$ density polystyrene slab
- Laminated to both face sheets with contact adhesive
- Assembled door is run through high pressure pinch rollers, achieving ultimate bond

Standard Premium Edge Construction

- Beveled hinge & lock edges
- Full height mechanical interlock with epoxy adhesive
- Visible edge seam standard
- Seamless edge optional

Standard Rigid 14 Gauge End Channel Construction

- 14 gauge inverted galvannealed top & bottom channels
- Projection welded to both face sheets
- For optional caps, see “Weather seals” on page 151.

Standard hardware preparations

Typical hardware applications shown. Refer to "Hardware" section for more details.

**Universal Mortise Hinge Prep**  
7 Gauge Universal hinge reinforcement

**61L Lock**

**86 Lock**

**Inactive Leaf ASA Strike Prep with Astragal attached**

**Optional 14 Gauge Closer Reinforcement**

**Standard: mortised and reinforced for**

- Patented Universal hinge preparations allow for easy field conversion from standard 4 1/2" x .134" standard weight hinges to 4 1/2" (114 mm) x .180" heavy weight hinges. Optional hinge preparation for 5" x .146" standard weight hinges or for 5" (127 mm) x .190" heavy weight hinges is also available.
- The cylindrical 161, 61L and mortise 86 lock preps are the most commonly used active leaf preparations. The 4 7/8 (124 mm) strike prep is the most commonly used inactive leaf preparation
- Optional reinforcements for surface Closers are available.
- Special hardware applications are available.

**Door Sizes and ANSI A250.8 Conversions**

Steelcraft product selection for CE Series doors has been matched to ANSI/ISD Level and Model designations.

- In accordance with ANSI A250.8-2017 (SDI 100), core material is not specific to the level or model designations. Core material selection is specified based on preference and application.

- Recommended minimum frame gauge also applies to the frequency of operation of the opening.

Doors • CE Series

Door edge construction
- Optional Edge Seams available in the CE Series doors:
  - CF: the mechanical edge seam is dressed smooth and finished prior to applying the factory primer.

Beveled Edge with Full Height Mechanical Interlock

Standard Visible Edge Seam
- CE Series Visible Seam Features
  - Full height mechanical interlock
  - Interlock filled with epoxy adhesive
  - Visible edge seam

Optional Seamless Edge
- CF Series Seam Filled Features
  - Standard Visible Edge Seam is tack welded above and below edge cutouts for hinges, locks, etc.
  - Edge Seam is then filled with structural adhesive and dressed smooth
  - No visible edge seam

Embossed Pattern Designs

Notes:
1. Standard door sizes are available.
2. Refer to pages 126-130 of this manual for all panel dimensions.
3. Availability of non standard door sizes is limited.

Glass light options
(Refer to the Lights and Louvers section for further details and options)

Dezigner® Trim
- Standard for 3/4" Thick Glass
- Optional for 1/2" Thick Glass

Flush Mounted Steel Trim
- For 1" Thick Glass

Divider Muntins are Not Available

Note: Glazing type and thickness vary per job requirements.
**A14 Series full glass entrance doors**

### About the product
The A14 Series full glass entrance doors are designed to meet the architectural requirements for exterior entrance applications. Refer to Section 11 (Architectural) for specifications and the selection and usage guide of the appropriate door constructions.

A14 Series doors are available for high frequency openings and entrances where large full glass (FG, FG2, and FG3) lights are required. This premium door construction combines the strength and dimensional stability of steel with the structural integrity of the laminate core with internal corner gussets to provide added strength and rigidity.

To meet application, specification and performance requirements for entrance door applications, the A14 Series Door offers a wide range of specifiable options including sizes, glass light designs and hardware (mechanical, pneumatic, electrical) preparations.

A14 Series doors are 1 3/4” (45 mm) thick.

### Installation
1. Installation shall conform to the published Steelcraft installation instructions, ANSI A250.11-2012 (formerly SDI 105) Recommended Erection Instructions for Steel Frames and HMMA B40.

2. Fire Rated Assemblies must be in accordance with NFPA Pamphlet 80. The Authority Having Jurisdiction is the final authority in issues related to the installation and use of installed Fire Rated Doors.

### Features and benefits
Steelcraft’s A14 Series doors offer the following standard unique features, which enhance long term performance and durability:

1. **Honeycomb Core Systems** that enhance the structural integrity of the door:
   - 1” (25 mm) cell kraft honeycomb configuration with internal corner gussets to provide added strength and rigidity.

2. **Seamless edges** with full height, epoxy filled mechanical Interlock edges, provide structural support and stability the full height of the door. Edges are seam filled with structural adhesive and dressed smooth. Includes tack welds above and below edge cutouts for hinges, locks, etc.

3. **Universal Hinge Preparations** (patented) allow for easy field conversion from standard weight .134” (3.3 mm) hinges to heavy weight .180” (4.7 mm) hinges.

4. **14 Gauge [0.067” (1.7 mm)] Inverted Top and Bottom Channels** provide stability and protection for the top and bottom edges from abuse.

5. **Beveled Hinge and Lock Edges** allow for tighter installation tolerances, ensure easier operation and eliminate binding and sticking.

6. **Recessed Dezigner™ Glass Trim** provides a clean, neat and flush finish with the door surface.

7. **Factory Applied Baked-On Rust Inhibiting Primer** paint in accordance with ANSI A250.10-2011.

### Specification compliance
1. Door construction for Steelcraft A14 Series doors meets the requirements of ANSI A250.8-2017 (SDI 100).

2. Hardware preparations and reinforcements are in accordance with ANSI A250.6-2003 (R2009). Locations are in accordance with ANSI/DHI A115 unless otherwise stated.

### Fire ratings
A14 Series doors meet fire rating requirements. They are listed for installations requiring compliance to NFPA252-1999 and UL-10C.
Standard Laminated Honeycomb Core with internal corner gussets

- 1” (25 mm) cell, 99 pound Kraft honeycomb
- Honeycomb surfaces sanded for maximum adhesion
- Impregnated with phenolic resin (resists mildew and vermin)
- Laminated to both face sheets with contact adhesive
- Assembled door is run through high pressure pinch rollers, achieving ultimate bond

Standard Premium Edge Construction

- Beveled hinge & lock edges
- Full height mechanical interlock with structural adhesive
- Tack welds above and below edge cutouts for hinges, locks, etc.
- Edge Seam filled with structural adhesive and dressed smooth
- No visible edge seam

Standard Rigid 14 Gauge End Channel Construction

- 14 gauge inverted galvannealed top & bottom channels
- Projection welded to both face sheets
- For optional caps, see “Weather seals” on page 151.

Universal Mortise Hinge Prep
7 Gauge Universal hinge reinforcement

6L Lock

86 Lock

Inactive Leaf ASA
Strike Prep with Astragal attached

14 Gauge Closer Reinforcement

Standard: mortised and reinforced for
- Patented Universal hinge preparations allow for easy field conversion from standard 4 1/2" (114 mm) x .134" (3.3 mm) standard weight hinges to 4 1/2" (114 mm) x .180" (4.7 mm) heavy weight hinges. Optional hinge preparation for 5" (127 mm) x .146" (3.7 mm) standard weight hinges or for 5" (127 mm) x .190" (4.8 mm) heavy weight hinges is also available.
- A multitude of standard lock preparations are available. The cylindrical 161, 6L and mortise 86 lock preps are the most commonly used active leaf preparations. The 4 7/8" (124 mm) strike prep is the most commonly used inactive leaf preparation.
- Optional reinforcements for surface and concealed Closers are available.
- Special hardware applications are available.

Door Sizes and ANSI A250.8 Conversions
Steelcraft product selection for A Series Stile and Rail Doors has been matched to ANSI/SDI designations for Level and Model. Recommended minimum frame gauge also applies to the frequency of operation of the opening.

Doors • A14 Series full glass entrance doors

Standard glass design options

3. Dimensions shown are to the exposed glass sizes. Refer to the Lights section for cutout and glass sizes.
4. Standard Vertical Stiles (both hinge and lock) are 6 13/16" (173 mm) wide to the finished edge opening of the glass light trim (6 1/4" from the door edge to the cutout of the glass light) and are beveled 1/8" (3.2 mm) in 2" (51 mm) with no visible seams.
5. Standard Top Rails are 6 1/4" (159 mm) high and are closed with inverted 14 gauge [0.067" (1.7 mm)] welded channels. Exterior applications require the addition of top caps to protect against the weather.
6. Standard Bottom Rails are 11 1/4" (285 mm) high and are closed with inverted 14 gauge [0.067” (1.7 mm)] welded channels.
7. Standard Intermediate Rails are 6 1/2" (164 mm) high and are used to create the FG2 and FG3 designs.
8. Special glass sizes are available; however, the vertical stiles are always fixed at 6 13/16" wide regardless of the glass size.

Glass light options
(Refer to the Lights and Louvers section for further details and options – Flush Mounted Steel Trim not available on 14GA doors)

Dezigner® Trim
• Standard for ¼" Thick Glass
• Optional for ½" Thick Glass

* standard gap for ¼" glass
optional 5/8" (16 mm) gap for ½" glass

*Note: Due to the 3 3/8" top rail dimension, the use of closers should be either avoided or be mounted with drop brackets on all 6' 8" high embossed 8 Panel doors.

Purpose
Embosed doors are specified when decorative door face sheets are architecturally required. The 8 panel embossed door design is a less popular design.

Application
Hotel, apartment or office entrance doors.

Product availability
This door option is available in the CE Series in either fire labeled or and non-labeled applications:
- 20 Gauge [0.032" (0.8 mm) A-40 galvannealed steel] only
- Available in 1/16" (1.5 mm) increments in width and height subject to the following:
  - 2' 8" (813 mm) thru 3' 0" (914 mm) widths
  - 6' 8" (2032 mm) thru 7' 0" (2134 mm) heights
8 Panel design (lights or louvers are not available).
6 panels
(2' 6" thru 2' 8" door widths)

Purpose
Embossed doors are specified when decorative door face sheets are architecturally required. The 6 panel embossed door design is the most popular design.

Application
Hotel, apartment, office entrance doors or other applications as specified.

Product availability
This door option is available in the CE Series in either fire labeled or non-labeled applications.
- 20, 18, or 16 Gauge. A-40 galvannealed steel.
- Available in ⅛" (1.5 mm) increments in width and height subject to the following:
  - 2' 6" thru 2' 8" widths
  - 6' 8" (2032 mm) thru 7' 0" (2134 mm) heights
- 6 Panel design has limited lights available. Louvers are not available.

Note: The rail dimension "A" is narrower on the hinge side of doors narrower than 2' 8" in nominal door width.

*Note: Due to the 4 ¼" top rail dimension, the use of closers should be either avoided or be mounted with drop brackets on all 6' 8" high embossed 6 Panel doors.

**Purpose**

Embosed doors are specified when decorative door face sheets are architecturally required.

**Application**

Hotel, apartment, office entrance doors or other applications as specified

**Product availability**

This door option is available in the CE Series in either fire labeled or non-labeled applications.

- 18 or 16 Gauge: Up to and including 3' 4" door widths
- Available in 1⁄16" increments in width and height subject to the following:
  - 2' 8" thru 3' 4" widths
  - 6' 8" thru 7' 0" heights: all door widths noted above
- HD2A panel designs do not have louver or light options available.
Dutch doors

Non-labeled

Purpose
The dutch door design incorporates two separate door leaves, hung one over the other, and mounted into a single swing opening. Both leaves can operate separately. The bottom leaf latches into the strike jamb of the frame.

When specified, the lower leaf can include a dutch door shelf (see "Dutch doors full shelf (non-labeled door)" detail on page 137).

Application
- Usually installed in storage room applications
- Hardware applications:
  - Bottom leaf—prepared for one (1) Government 161, 61L or Government 86 lock.
  - Top leaf locking option:
    - Standard: Surface applied bolt engaging bottom leaf
    - Option: Government 161 lock preparation latching into strike jamb
    - Option: Government 161 lock preparation latching into top of bottom leaf (see "Dutch doors (labeled)" on page 138).
- Top door leaf may be equipped with a 14 gauge closer reinforcement as an option

Notes
- Sizes available from 2' 0" (610 mm) x 6' 8" (2032 mm) thru 4' 0" (1219 mm) x 7' 2" (2184 mm)
- Single Swing applications only: no double door configurations
- Glass lights are limited to one 100 square inch light in top leaf
- High Frequency Hinge Reinforcements are installed at the top hinge of each door leaf

Product availability
This product option is available on L and B Series doors.

Nominal Door Width

Nominal Door Height (Frame bottom to Header Rabbet)

Nominal Door Height (Frame bottom to Header Rabbet)
Doors variations and options • Dutch doors

Full shelf (non-labeled)

Application
Non-labeled dutch doors applications. The 12" (305 mm) wide 16 gauge full shelf and brackets for non-labeled doors, or the 7" (178 mm) wide half shelf and brackets (see "Dutch doors (labeled)" on page 138) is shipped loose from the factory and is to be field attached to the bottom door leaf with the supplied No. 10 x ¾" (19 mm) Bugle Head Sheet Metal Screws.

Purpose
Dutch door shelves are not supplied with dutch doors unless specified. When the top leaf is opened, the bottom leaf and shelf act as a counter that can be used for multiple uses. If the dutch door shelf (full or half shelf) is not used, the top of the bottom leaf specify a steel top cap installed.

Product availability
The full and half shelf can be used on Steelcraft L and B Series non-labeled doors. Shelves are furnished factory prime painted.
Labeled

**Nominal Door Width**

(Frame Rabbet to Rabbet)

Next Door Width

Nominal Door Height (Frame bottom to Header Rabbet)

- **Dim. "A"** = Net Door Height
- **Dim. "B"** = Top Door Height
- **Dim. "C"** = Hinge Spacing
- **Dim. "D" Lock Location**

**Closed Reinforcement**

Finished Floor Surface (Bottom of Frame)

**Purpose**

Fire labeled dutch door design incorporates two separate door leaves, hung one over the other, and mounted into a single swing opening. Both leaves can operate separately. The bottom leaf must latch into the strike jamb of the frame. The top leaf must latch into either the strike jamb or into the top leaf.

When specified, the lower leaf can include a dutch door half shelf (see "Dutch Door Full Shelf", detail on page 137).

### Application

- **Single Swing applications only:** no double door configurations
- **High Frequency Hinge Reinforcements** are installed at the top hinge of each door leaf
- **Labeled dutch door openings must have two (2) locks:**
  - Standard: Both locks latching into jambs
  - Optional:
    1. Top lock latching into top of bottom leaf
    2. Bottom lock latching into jamb
    3. See "Dutch Door: Optional Lock Preparation" on page 140
  - Top door leaf must be equipped with a closer reinforcement
  - **Maximum size for 3 Hour Fire Rating:**
    4' 0" (1219 mm) x 7' 2" (2184 mm)
  - **Limited to one 100 square inch light in top leaf only for 1 1/2 hour fire rating**

### Product availability

- This product option is available for Steelcraft L and B Series steel stiffened doors. See the Fire rated products section for additional information.

**Finish Floor Surface (Bottom of Frame)**
Doors variations and options • Dutch doors

Half shelf (labeled)

Purpose
Dutch door shelves are not supplied with dutch doors unless specified. When the top leaf is opened, the bottom leaf and shelf act as a counter. If the dutch door shelf (half shelf) is not used, it is recommended that the bottom leaf includes a steel top cap installed.

Application
Labeled and non-labeled fire rated dutch door assemblies
The 7" wide (178 mm) 16 gauge (1.3 mm) half shelf and brackets for Labeled doors is shipped loose from the factory and is to be field attached to the bottom door leaf with the supplied No. 10 x 3/4" (19 mm) Bugle Head Sheet Metal Screws. The astragal is factory welded to the top door leaf.

Product availability
The half shelf can be used on Steelcraft L and B Series labeled or non-labeled doors. The shelf is furnished factory prime painted.
Optional lock preparation

**Purpose**

In the interest of expedient transition through the path of the means of egress, a single lock operation of latch bolt retraction becomes paramount. By choosing this preparation, the only lock operation required to retract the latch bolt is found at the standard lock location on the bottom leaf.

**Application**

Labeled and non-labeled fire rated dutch door assemblies.

This alternative lock preparation combination is Fire Rated up to 3 hours. The top leaf is limited to a Government 161 lock preparation. The bottom leaf may be prepared for a Government 86, 61L or 161 lock. The latch bolt of the lock in the top leaf projects into a cylindrical strike attached to the strike preparation in the top of the bottom leaf, eliminating one strike preparation in the jamb. This optional lock preparation must be specified when ordering.

**Product availability**

This lock preparation is available on Steelcraft L and B Series Steel Stiffened doors for non-label, or for labeled openings up to 3 hour Fire Ratings. See the Fire Rated products section for additional information.

**Notes:**

1. Top leaf must have a listed 161 for latching into bottom leaf
2. Bottom leaf must have 161, 6L or 86 lock latching into the strike jamb
3. Knob to knob location will vary depending on latching devices used.
   - 10 3/16" if 161 top leaf X 161 or 6L in bottom leaf
   - 12 7/8" approx. if 161 in top leaf X 86 in bottom leaf
4. Astragal required on top leaf.
5. See "Dutch doors full shelf (non-labeled door)" detail on 132.
Monorail

Preparation

Purpose
When the movement of heavy equipment or material is required between separated work areas of an industrial building, overhead monorails are employed to support and transport mechanically operated cranes. When specified, doors with monorail preparations are designed to accommodate the transfer equipment and perform as closures between these spaces.

Application
Industrial non-fire rated applications

Product availability
This door option is available for the following Steelcraft door Series:
- L and B Series full flush doors

8” (203mm) Maximum Width
L and B Series Doors

24” (9610mm) Maximum Height

Optional Top Cap

14 Gauge [0.067” (1.7mm)]

MonoRail Closure Channel

1/16” (25.4mm)
Doors variations and options • GRAINTECH™

GRAINTECH™

Steel doors

Clear Coat baked on for the ultimate in UV and graffiti resistance

Dezigner® Trim flush light kits, stained to match the door

Multiple Finishes provide options for a variety of applications

Purpose
When a premium wood finish is desired, and the features and benefits of steel are required, Steelcraft®’s GRAINTECH™ products provide the flexibility your specification demands.

Application
The exclusive engraining and staining process employed simulates a wide variety of wood finishes, from the standards of Birch, Ash, Oak, Maple, Mahogany and Walnut to custom finish matching or primed only. GRAINTECH™ is ideal to use in Schools, Hospitals, Offices, Nursing Homes, Apartment Buildings, Dormitories, etc. Unlike veneered or solid wood doors, GRAINTECH™ is fully warranted for use on exterior openings, is less susceptible to damage, and will never warp, crack, peel or bow. Dezigner® Trim Glass Lights used for glass light openings is likewise supplied in the finish matching the door.

Product availability
This product option is available in the following door constructions:
- CE Series
  - E6 design only (18 and 16 gauge)
  - HD2 and HD2A (18 and 16 gauge)
- HI16 and HE16 Series
- L Series (18 and 16 gauge)
- T Series (18 and 16 gauge)

Glass light options:
- GRAINTECH™ glass light options for L Series doors are V, N3, N4, N5, NL, G, FG, FG2 and FG3
- GRAINTECH™ glass light options for CE Series doors E4TL

See the Fire Rated Products section for application to Fire Rated doors.

Hardware

High frequency hinge preparation

Purpose
The optional high frequency hinge reinforcement provides additional strength to the 4 1/2" (114 mm) or 5" (127 mm) hinge reinforcement specified for use in high abuse openings.

Application
The 10 gauge (3 mm) auxiliary hinge reinforcement is spot welded to the top and bottom of the top hinge reinforcement in 2 locations of the door:

- The face of the door panel
- The 7 gauge (4.7 mm) hinge reinforcement (projection welded to the door at the factory)

Primarily applicable to the top hinge reinforcement of 4 1/2" (114 mm) or 5" (127 mm) hinge reinforcements the auxiliary reinforcement may be used on other hinge locations when specified.

Product availability
High frequency hinge reinforcements are available factory installed only, and are applicable to all Series of Steelcraft labeled and non-labeled steel doors.
### Aluminum door edge nosing

**Purpose**
Optional aluminum door edge nosing is recommended for use on double acting doors to minimize the operating clearance, between the door edge(s) and the jamb(s) of the frame.

**Application**
- Door edge nosing, manufactured from extruded aluminum, is prime painted.
- Recommended application to hinge edge of doors equipped with Double Acting Center Hung Pivots, Double Acting Spring Hinges, Double Acting Floor Closers and Rescue Hardware to reduce the additional vertical edge clearances required.
- Some applications may require nosing to be applied to both the pivot/hinge and lock edges of the door. Door size and/or pivot/hinge location must be adjusted accordingly.
- The door edge nosing is placed over the door edge. A No. 4 x 1" oval head sheet metal screw is installed through a $\frac{3}{16}$" (5 mm) diameter hole to attach the unit to the door.
- Double acting doors are normally installed in cased open frames (frames that have no stops). However, smoke and fire can penetrate the clearance gap, creating a failure.
- No labeled applications.

**Product availability**
This door option is available for the L, B, CE, and A14 Series doors.
Interviewer prep

Purpose
Interviewer preps are specified when vision through a door without the use of a window is required.

Application
Hotel room or apartment entrance doors.

The Interviewer preparation (Peep Hole) has a normal location centered on the door with various heights that depend on application. Two of the standard vertical locations are shown above. The maximum size preparation is a 3" diameter (76.2 mm) hole. For fire rated applications, the viewer must also be fire rated. Maximum 3/4" diameter hole unless otherwise listed and by UL or ITS/WHI.

Product availability
This door option is available for the L, SL, B, T, CE, and non-labeled H Series doors.
Peep slot with trim

**Purpose**
Certain building segments require functional, inconspicuous observation positions to enforce the safety and security regulations prescribed by the facility operating procedures. This optional viewing unit is factory installed.

**Application**
The Peep Slot with trim preparation has a recommended vertical location of 60" (1270 mm) and is centered on the door. Customer specified heights that depend on application, are available. The cutout dimension is 13 1⁄8" (343 mm) wide x 1 7⁄8" (48 mm) high. The perimeter of the cutout is reinforced with a 18 gauge channel. The U-Channel trim finishes the viewing area dimension to 3⁄8" (9.5 mm) high x 12" (304.8 mm) wide.

**Product availability**
This preparation is available on Steelcraft L and B Series doors.
Mail slot preparation

**Purpose**
Optional mail slots allow for the pass through of mail. They are usually located in the bottom of the door and are prepared in the bottom of the door when specified.

**Application**
The preparation must be placed within the minimum edge dimensions shown above. Customer must indicate the manufacturer, template number and model number of the unit to be installed in order to prepare the proper size opening.

**Product availability**
This preparation is available on Steelcraft L and CE Series doors.
Z Astragal

Applications

Inactive Leaf Mounting

Active Leaf Mounting

Double Egress Mounting

Z Astragal Applications

Purpose
Astragals are used to close the gap between pairs of doors. The astragal seals the opening from weather, light, and in some cases, sound. Security requirements dictate the appropriate application.

Application
- This astragal is normally supplied with pairs of Steelcraft doors.
- This is a handed product.
- Attachment is made to the inactive door leaf, with the sheet metal screws supplied.
- Shipped loose for field attachment.
- This astragal can be used on both rated fire doors and non-rated doors.

Product availability
This product option is available for Steelcraft L, SL, B, T, CE, H, HE, PW, and A14 Series doors. See the Fire Rated products section for application to Fire Rated doors.
Inactive leaf mounting

**Purpose**
Astragals are used to close the gap between pairs of doors. The astragal seals the opening from weather, light, and in some cases, sound. Security requirements dictate the appropriate application.

**Application**
- This astragal is normally supplied with pairs of Steelcraft doors.
- This is a handed product; it has the same hand as the inactive door leaf.
- Attachment is made to the inactive door leaf, with the sheet metal screws supplied.
- Shipped loose for field attachment.
- Active Leaf Mounting or Double Egress Mounting, must be called-out separately on the order.
  - The astragal is formed to match the bevel of the door.
  - When mounted to an active leaf or double egress leaf, the astragal forming is reversed.
- This astragal can be used on both fire rated and non-rated doors.

**Product availability**
This product option is available for Steelcraft L, SL, B, T, H, HE, PW, and A14 Series doors. See the Fire Rated Products section for application to Fire Rated doors.
Double egress mounting

**Purpose**
Astragals are used to close the gap between pairs of doors. The astragal seals the opening from weather, light, and in some cases, sound. Security requirements dictate the appropriate application.

**Application**
- Required on all three (3) Hour Rated Double Egress openings. Astragal must be ordered separately.
- This is a handed product; it has the same hand as the active leaf.
- The astragal is blank, with no hardware cutouts.
- Shipped loose for field attachment, with the sheet metal screws supplied.
- The astragal can be attached to either leaf as shown, as it does not impede operation.
  - Can be used on pairs of doors with Vertical Rod Exit devices on both leaves.
  - This astragal can also be used on 1 ½ and ¾ hour rated Double Egress openings although it is not required to meet the label requirements.
- This astragal can not be used on the active door leaf or inactive door leaf of a conventional pair of doors due to reverse forming and no hardware cutouts.

**Product availability**
This product option is available for Steelcraft L, SL, B, T, and CE Series doors. See the Fire Rated Products section for application to Fire Rated doors.
Doors variations and options • Z Astragal

Active leaf mounting

**Purpose**
Astragals are used to close the gap between pairs of doors. The astragal seals the opening from weather, light, and in some cases, sound. Security requirements dictate the appropriate application.

**Application**
- This astragal requires a special call-out when ordered.
- This is a handed product; it has the same hand as the active door leaf.
- Shipped loose for field attachment, with the sheet metal screws supplied.
- This astragal can not be attached to an inactive door leaf or a double egress door because of the hardware cutouts.
  - The lock and strike type being used affects the astragal since cutouts are required for the lock front and strike lip. The notching for an ASA strike lip notch is provided.
  - The lock front must be shimmed to insure that the lock front seats flush with the astragal.
- This astragal can be used on both fire rated and non-rated doors.

**Product availability**
This product option is available for Steelcraft L, SL, B, T, CE, and A14 Series doors. See the Fire Rated Products Section for application to Fire Rated doors.
Purpose
Astragals are used to close the gap between pairs of doors. The astragal seals the opening from weather, light, and in some cases, sound. Security requirements dictate the appropriate application. Hardware applications determine the appropriate preparation(s).

Application
- **Strike Preparations**: This is the conventional strike preparation in an astragal mounted to the inactive leaf. The astragal has mounting tabs pierced from the base metal. The tabs are drilled and tapped for the screws supplied by the hardware manufacturer (with the strike). The type of strike being used must be specified.

- **Lock Front & Strike Preparations**: This is the type of cutout required for an astragal that is mounted to the active leaf. The cutouts are clearance holes for the lock front. The notching for an ASA strike lip is provided as shown in the detail above.

- **Flush Bolt Preparations**: When mounted to the inactive leaf, the astragal is prepared at the top and the bottom for flush bolts (manual or automatic) when they are specified as the locking device for the inactive leaf. The preparation consists of tabs stamped out of the base metal. The tabs are drilled and tapped for the screws supplied by the flush bolt manufacturer. If surface bolts are used, this preparation is not required.

Product availability
These hardware preparations are available in all Steelcraft Z-type astragals.
Flat plate astragal

**Purpose**
Astragals are used to close the gap between pairs of doors. The astragal seals the opening from weather, light, and in some cases, sound. Security requirements dictate the appropriate application.

**Application**
- Attached to the outside of the active leaf on swing-out doors
- Attached to the outside of the inactive leaf on swing-in doors
- The astragal is a 14 gauge (1.7 mm) steel part; attached by using screws or by welding to the proper door leaf
- For this type of astragal, a wide inactive leaf is recommended
- When a conventional lock and strike are used, notching for the strike lip is performed in the field by others
- See Hardware Preparations section for strike, lock front and flush bolt preparation

**Product availability**
This product option is available for Steelcraft L, SL, B, T, CE, and A14 Series doors. See the Fire Rated Products Section for application to Fire Rated doors.

---

**Exposed fastening**

![Diagram of exposed fastening](image)

INSWING

OUTSWING

- Notch by Others
- 3/4" (19mm)
- 1-1/2" (38mm)
2 piece astragal

Applications

Application
The 2 piece astragal is an alternate active leaf astragal. It allows for using the flushbolt and strike clearance holes on standard inactive leafs and providing an exterior bar type astragal.

Purpose
Astragals are used to close the gap between pairs of doors. The astragal seals the opening from weather, light, and in some cases, sound. Security requirements dictate the appropriate application.

Application
- This is a handed product; it has the same hand as the inactive door leaf
- For this type of astragal, standard width inactive leaf is recommended
- Shipped loose for field attachment
- The 14 gauge galvanized channel section is mounted to the inactive leaf with the sheet metal screws supplied
- The 12 gauge (2.5 mm) galvanized flat bar section is mounted to the pull side face of the door with the sheet metal screws provided
- This astragal can be used on both rated and non-rated doors.

Product availability
This product option is available for Steelcraft L, B, T, CE, and A14 Series doors. See the Fire Rated Products Section for application to Fire Rated doors.
Doors variations and options • 2 piece astragal

Hardware preparations

Flushbolt Preparation
Inactive Leaf Channel

Strike Preparation
Inactive Leaf Channel

Strike Lip Preparation
Active Leaf Astragal

Purpose
Astragals are used to close the gap between pairs of doors. The astragal seals the opening from weather, light, and in some cases, sound. Security requirements dictate the appropriate application. Hardware applications determine the appropriate preparation(s).

Application
• **Flush Bolt Preparations:** When mounted to the inactive leaf, the astragal is prepared at the top and the bottom for flush bolts (manual or automatic) when they are specified as the locking device for the inactive leaf. The preparation consists of tabs stamped out of the base metal. The tabs are drilled and tapped for the screws supplied by the flush bolt manufacturer. If surface bolts are used, this preparation is not required.

• **Strike Preparations:** This is the conventional strike preparation in an astragal mounted to the inactive leaf. The astragal has mounting tabs pierced from the base metal.
  - The tabs are drilled and tapped for the screws supplied by the hardware manufacturer (with the strike). The type of strike being used must be specified.

• **Strike Lip Preparations:** This is the type of cutout required for an astragal that is mounted to the active leaf. The notching for an ASA strike lip is provided as shown in the detail above.

Product availability
These hardware preparations are available in all Steelcraft 2 piece astragals.
Weather seals

Top & bottom caps

Steel Top Cap (Screwed-in) (bottom cap also available)
- 24 ga. top cap sits on top edge of door, flush with exterior surface of door and adds 0.020” (0.5 mm) to the height of the door
- Attached to 14 ga. top channel

Flush/Filled Top Cap (bottom cap also available)
- 18 ga. top channel sits flush with top of door and is seam filled
- Attached to 14 ga. top channel

Recessed Top Cap (Screwed-in) (bottom cap also available)
- 18 ga. top channel is recessed ~1/8” from top of door
- Attached to 14 ga. top channel

Purpose
Top and/or Bottom Caps provide security shields from unwanted objects placed in the 14 gauge (1.7 mm) top and bottom closure channels. Steel and Flush/Filled caps shield from unwanted moisture penetration when installed on exterior outswing doors. If required, top caps may be sealed with caulking in the field by others. To prevent the build-up of moisture on the interior of the door, **bottom caps should never be caulked**. All caps and the 14 gauge closure channels they attach to are galvannealed.

Application
All top and bottom caps can be ordered and installed at the factory. Only the Steel Top Cap with Screws can be installed by others and is also available in "Parts" from our Price book.

Certification Label Locations with continuous hinge preps or pocket pivots:
- Steel Top Cap (screwed-in): Label located on top channel underneath cap
  - Supplemental label attached to top cap indicating certification label is attached underneath
- Flush/filled: Label attached to top of cap
- Recessed Top Cap (screwed-in): Label attached to top of cap

Product availability
Top and/or bottom caps are available in the 3 versions -- Steel screwed-in, Flush/filled, and Recessed. All are available on any available Steelcraft door series for non-label, or for labeled openings up to 3 hour Fire Ratings, except for the following:
- SZ Series doors cannot be ordered with top caps, but the Steel top cap version can be ordered through "Parts" and installed by others for non-labeled openings or for 1 1/2 hour Fire Ratings.
- Recessed caps are not available on Hurricane H Series doors
- Paladin PW series doors have a 12 gauge top channel installed as standard, not filled.
- The Stainless Steel LS series doors are available with 18 gauge stainless caps either screwed in or tack welded 3” from each end and 12” OC. Seams can be filled (sealed top) with silicone as an option.

No. 8 x 1-1/2” flat head sheet metal screws
**Doors variations and options • Weather seals**

**FAS-SEAL™ door bottom sweep**

The concealed double sealing sweep conforms to sill variances, providing an effective seal. The FAS-SEAL™ door bottom is made from a synthetic material that is impervious to the elements, is capable of withstanding extreme temperatures and is Fire Rated.

**Application**

FAS-SEAL™ door bottoms are installed to the bottom channel with No. 10 x 3/4" Pan Head SMS

- Doors sized from 2' 0" (610 mm) wide to 3' 0" (914 mm) wide: apply 3 screws furnished through the 3 holes provided in the FAS-SEAL™ door bottom into the holes provided in the door bottom channel
- Doors sized from 3' 4" (106 mm) wide to 4' 0" (1219 mm) wide:
  - Apply 4 screws furnished through the 4 holes provided in the FAS-SEAL™ door bottom into holes field drilled by others, or
  - Apply 4 No. 10 x 3/4" self-drill and tap screws (by others) through the four holes provided in the FAS-SEAL™ door bottom into holes field drilled by others or by self-drill and tap screws

**Product availability**

Sweeps for doors 2' 0" through 4' 0" in width are available from factory inventory and are used on Steelcraft L, SL, B, T, TH, CE, H, HE, PW, and A14 Series doors.

---

The combination of Steelcraft door, frame, PS074 Weatherstripping, and the FAS-SEAL™ door bottom meets the requirements of NFPA 105, Smoke Control Standard, for both warm, and ambient room temperatures.

The ASTM E283 Air Infiltration Test was conducted on doors with and without a FAS-SEAL™ door bottom. A Non-weatherstripped frame with a 5/8" (16 mm) high threshold was used. The results of these tests were:

- Without FAS-SEAL™: 8.77 CFM/FT
- With FAS-SEAL™: 4.71 CFM/FT

- **CFM/FT** = Cubic Feet Per Minute Per Lineal Foot of Crack
- Tests were conducted by a nationally recognized test and research laboratory.

General information

Steelcraft doors can be specified and supplied with various glass options and louver cutouts depending on the architectural and applications needs.

Door designs for full flush doors
The glass configuration is referred to as the door design. Letter designations describe the glass light designs. A brief description of the standard glass light available:

- **F**: Flush door: designation for a door without any glass light installed.
- **G**: Half Glass door: designation for a door with a glass light located in the top half of the door face. The glass size will vary with the size of the door. However, for special sized doors, the next smaller glass size will be supplied.
- **V**: Vision Light door: designation for a door with a small square window located in the top of the door. The glass size will remain constant regardless of the door size.
- **N**: Narrow Light door: designation for a door with a long narrow light located along the lock edge of the door. The following variations in the Narrow light designs are available as standard:
  - **N Light**: door prepared for a 7 3/8" (187 mm) wide glass light (exposed glass size) which varies in height depending on the door height.
  - **N3 Light**: door prepared for a 4" (102 mm) wide and 25" (635 mm) high glass light (exposed glass size).
  - **N4 Light**: door prepared for a 3" (76 mm) wide and 33" (838 mm) high glass light (exposed glass size).
  - **N5 Light**: door prepared for a 5" (127 mm) wide and 20" (508 mm) high glass light (exposed glass size).
  - **LNL Light**: door prepared for a 7 3/8" (187 mm) wide glass light (exposed glass size) which extends the majority of the door height, and varies in height depending on the door height.
- **FG**: Full Glass L Series doors: designation for L Series doors with a full view window, glass extending nearly the full door width and height. The following variations in Full Glass Light designs are available:
  - **FG Light**: door prepared for a full view window extending nearly the full width and height of the door.
  - **FG2 Light**: variation of the FG Light which includes a stationary horizontal mid-rail dividing the window into two (2) individual lights.
  - **FG3 Light**: variation of the FG Light which includes two (2) stationary horizontal mid-rails, dividing the window into three (3) equal individual lights.

Door (light) designs for CE embossed doors
Doors with glass cutouts specifically sized to fit into the CE Series embossed door.

- **E4TL**: designation for a door with dual vision lights located in the top section of the door and four embossed patterns in the lower section.

Door designs for full glass entrance doors
The glass configuration is referred to as the door design. Letter designations describe the glass light designs. Refer to page 125 for unique A14 Series door construction. A brief description of the standard glass light available:

- **FG**: Full Glass A14 Series doors: designation for A14 Series doors with a full view window, glass extending nearly the full door width and height. The following variations in Full Glass Light designs are available:
  - **FG Light**: door prepared for a full view window extending nearly the full width and height of the door.
  - **FG2 Light**: variation of the FG Light which includes a stationary horizontal mid-rail dividing the window into two (2) individual lights.
  - **FG3 Light**: variation of the FG Light which includes two (2) stationary horizontal mid-rails, dividing the window into three (3) equal individual lights.

Note on Window Sizes and Designs:
All door lights covered in this section are Steelcraft standards. Special light sizes and configurations are available when specified. For special size lights using Steelcraft trims, the glass cutting size is the Exposed Glass Size (EGS) plus 1 1/8". Refer to the following pages for specific details and dimensions of the various glass designs.
Glazing kit options

Flush door glass kits include the following glass trim systems:

**Dezigner® Trim**

*Dezigner® Trim* is a unique and patented steel trim, recessed into the door face at the factory, providing a neat flush door surface designed to accommodate Standard $\frac{3}{4}$" (6 mm) thick glass and Optional $\frac{3}{8}$" (13 mm) thick insulated glass.

**Dezigner Trim (recessed) for $\frac{3}{4}$" Glass (standard)**

- Recessed panel so trim is flush with door surface
- Reinforcement channel

**Dezigner Trim (recessed) for $\frac{3}{8}$" Insulated Glass**

- Recessed panel so trim is flush with door surface
- Reinforcement channel

**Flush Mounted Steel Trim** sits in the recessed door face and is flush with the door surface. It is available for Standard $\frac{3}{4}$" (6 mm) thick glass as well as Optional 1" (25 mm) thick insulated glass. Glazing beads are screw attached.

Not available on 14GA doors.

**Flush Mounted Steel Trim for $\frac{3}{4}$" Glass**

- Recessed panel so trim is flush with door surface
- Reinforcement channel

**Flush Mounted Steel Trim for 1" Insulated Glass**

- Recessed panel so trim is flush with door surface
- Reinforcement channel

**Dezigner® Trim for Distributor Prep & Install**

*Dezigner Trim for Distributor Prep & Install* is shipped assembled with flush clips (no recess in the door face). This trim is the same as the factory installed Dezigner® trim, but it rests on the surface of the door face, like conventional hollow metal doors.

**Dezigner Trim (for Distributor Prep) for $\frac{3}{4}$" Glass (standard)**

- Flat panel so trim overlaps door surface

**Dezigner Trim (for Distributor Prep) for $\frac{3}{8}$" Insulated Glass**

- Flat panel so trim overlaps door surface

**Overlapping Steel Trim** sits tight on the door face and overlaps the door surface. This trim accommodates a wide range of sizes from $\frac{3}{4}$" thru 1" thick insulated glass. Glass thickness must be specified. Glazing beads are screw attached.

**Overlapping Steel Trim for $\frac{3}{4}$" THRU $\frac{5}{8}$" Glass**

- Flat panel so trim overlaps door surface
- Glazing bead mounting location determined by glass thickness

**Overlapping Steel Trim for 3/4" THRU 1" Insulated Glass**

- Flat panel so trim overlaps door surface
- Glazing bead mounting location determined by glass thickness

**Note:** Reinforcement Channels shown are used with labeled doors and all Full glass & H Series doors.
Flush door glass lights

**Vision light: V**

*L, SL, B, H, and T Series doors*

**Glass light sizes**

The following critical dimensions apply to the standard Steelcraft V Light (vision light) window designs:

<table>
<thead>
<tr>

* Dimensions shown are to Exposed Glass Size

Variable narrow light door design
Designation for a door with a long narrow light located along the lock edge of the door. The following variations in the Narrow Light designs are available as standard:

- **N Light**: door prepared for a 7 3/8" (191 mm) wide glass light (exposed glass size) which varies in height with the door height. However, for special sized doors, the next smaller glass size will be supplied.

- **LNL Light**: door prepared for a 7 3/8" (191 mm) wide glass light (exposed glass size) which extends the majority of the door height, and varies in height with the door height.

Glazing bead system
1/4" (6 mm) thick glass lights are available as standard with the Steelcraft Dezigner® trim system for L, SL, and B Series doors. 1/2" (13 mm) thick insulated glass lights are available as an option with the Steelcraft Dezigner® trim system for insulated glass. 1/2" is standard on H Series doors. Insulated glass lights thicker than 1/2" (13 mm) are available as an option with specially designed overlapping steel trim.

Ordering nomenclature
The door ordering nomenclature is suffixed with the letter:

- **N**: 7 3/8" (191 mm) wide glass light (which varies in height with the door height).

- **LNL**: 7 3/8" (191 mm) wide glass light (which extends the majority of the door height).

Door series available
Narrow Light kits are available for the following door series in all of their standard options and gauges: L, SL, B, and H Series.

Glazing details

Note: For fire rated applications using ceramic type glazing, consult the glass manufacturer’s glazing instructions for glass, caulking and/or glazing tape requirements. Details will vary as required by glazing selections.

Note: For special size doors, the next smaller glass size will be used. The glass light location will be held from the bottom of the door.
Fixed narrow light door design
Designation for a door with a long narrow light located along
the lock edge of the door. The following variations in the
Narrow Light designs are covered on this sheet, and are
available as standard:

- **N3 Light**: door prepared for a 3” (76 mm) wide and 33”
  (838 mm) high* glass light.
- **N4 Light**: door prepared for a 4” (102 mm) wide and 25”
  (635 mm) high* glass light.
- **N5 Light**: door prepared for a 5” (127 mm) wide and 20”
  (508 mm) high* glass light.

Glazing bead system
¼” (6 mm) thick glass lights are available as standard with the
Steelcraft Dezigner® trim system for L, SL, B and T Series
doors.
½” (13 mm) thick insulated glass lights are available as an
option with the Steelcraft Dezigner® Trim System for insulated
glass. ½” is standard on H Series doors.

Insulated glass lights thicker than ½” (13 mm) are available as
an option with specially designed overlapping steel trim.

Ordering nomenclature
The door ordering nomenclature is suffixed with the letter:

- **N3**: 3” (76 mm) wide and 33” (838 mm) high* glass light.
- **N4**: 4” (102 mm) wide and 25” (635 mm) high* glass light.
- **N5**: 5” (127 mm) wide and 20” (508 mm) high* glass light.

Door series available
Narrow Light kits are available for the following door series in
all of their standard options and gauges: L, SL, B, H, and T
Series.

Glass light sizes
The following critical dimensions apply to the standard
Steelcraft N3, N4, and N5 Light window designs:

<table>

Glazing details
Note: For fire rated applications using ceramic type glazing,
consult the glass manufacturer’s glazing instructions for glass,
caulking and/or glazing tape requirements. Details will vary as
required by glazing selections.

* Dimensions shown are to Exposed Glass Size
Half glass light: G
L, SL, B, and H Series doors

Half glass door lights
Designation for a door with a glass light located in the top half of the door face. The glass size will vary with the size of the door. However, for special sized doors, the next smaller glass size will be supplied.

Glazing bead system
¼" (6 mm) thick glass lights are available as standard with the Steelcraft Dezigner® trim system for L, SL, and B Series doors.

½" (13 mm) thick insulated glass lights, are available as an option with the Steelcraft Dezigner® trim system for insulated glass. ½" is standard on H Series doors.

Insulated glass lights thicker than ½" (13 mm) are available as an option with specially designed overlapping steel trim.

Ordering nomenclature
The door ordering nomenclature is suffixed with the letter: G.

Door series available
Half Glass kits are available for the following door series in all of their standard options and gauges:
L, SL, B, and H Series.

Glass light sizes
The following critical dimensions apply to the standard Steelcraft G Light window designs:

**Glazing details**

- For fire rated applications using ceramic type glazing, consult the glass manufacturer’s glazing instructions for glass, caulking and/or glazing tape requirements. Details will vary as required by glazing selections.
Special glass lights

Von Duprin® INPACT™ glass lights (mortise and concealed vertical rod)

Optional details

Glass lights
Glass light cutouts are available in N4, N5 and V Light designs without modification. Other lights are available but have limited height due to the exit device preparation.

Glazing bead system
¼" (6 mm) thick glass lights are available as standard with the Steelcraft Dezigner® Series trim system.

½" (13 mm) thick insulated glass lights, are available as an option with the Steelcraft Dezigner® Series trim system for insulated glass.

Insulated glass lights thicker than ½" (13 mm) are available as an option with specially designed overlapping steel trim.

The following critical dimension applies to the standard Steelcraft light designs with INPACT™ preparation:

Glass Cutting Size = exposed glass size + 1 1/8"
Door Cutout Size = exposed glass size + 1 ½"

Notes:
1. Consult code for ADA requirements on glass cutouts.
2. Refer to pages 270-271 for specific INPACT™ device preparation requirements.

Note: For fire rated applications using ceramic type glazing, consult the glass manufacturer’s glazing instructions for glass, caulking and/or glazing tape requirements. Details will vary as required by glazing selections.
Paladin glass lights

Dimensions shown are to exposed glass size

Glass lights
Fully installed from the factory. Glass lights with trim included in PV and PN labels. Light designs without modification. Lights can be added to any Paladin door available in a 3-sided frame. Lights are not available in variable sizes or locations. Fire rated versions (PVF and PNF) are available up to 90 minutes.

Glazing trim system
Paladin lights come fully installed from the factory and cannot be replaced or modified without nullifying tornado code labels.

Care and Instructions
When you receive your door, the glass will have a care instructions which include the below information:

1. Do not remove the label until after finish paint and ready to seal the glass trim.

2. Painting: Do not powder coat your door to avoid exposing to extremely high temperatures that could damage components and affect performance.

3. Caulk/Sealant: A quality glass trim sealant must be applied to any weather-facing glass and trim to avoid water infiltration and corrosion over time. Apply sealant along full perimeter with no gaps between trim and glass, and between trim and door. Caulk may also be added to the non-storm side of the door as well for added protection and for visual preference.
   - For fire rated assemblies with glass, a UL classified fire rated sealant must be used (contact Technical product support. See page iv).

4. Do not cut on/take care not to damage: The outer layers of your Paladin glass are typical of other window glass that can be scratched and can break. Please take care. Broken glass will void your tornado label and must be replaced by replacing the entire tornado door with glass.

5. Film layer: The non-storm facing side of the glass has a protective film. Take care not to damage or remove. Do not use masking tape and do not otherwise scratch, damage or pull this film off.
   - The film layer side is on the non-storm side of the door, identified by the side of the glass trim with visible Phillips head trim bolts.

6. Cleaning: Do not use abrasive agents and/or bristle brushes when cleaning your glass surface. Use synthetic/soft cloths. Use common window cleaning solutions (ammonia solutions allowed 30 days after installation).

7. Replacement: If the film is damaged, call Steelcraft support at (877) 671-7011 to schedule replacement by an authorized representative. It is critical to door performance to resolve this condition as soon as possible.

Notes:
1. PN lights only are ADA compliant / 43" from visible glass to finished floor.
2. Refer to "PW Series flush doors" on page 211 for specific Paladin preparation requirements.
Embossed door glass lights

Half glass light: Fixed sizes
Door series available
Light kits are available for the following door series in all of their standard options and gauges: CE, CF, and HE Series.

Glazing details

6 5/8" (165 mm)
6 5/8" (143 mm)

Varies*

4 5/8" (118 mm)

Note #1: The center rail of the FG2 door is located 40" above the bottom of the frame (with a ¾" door undercut).

Note: EGS = Exposed Glass Size  
GCS = Glass Cutting Size  
DCS = Door Cutout Size

### Glazing details

Note: For fire rated applications using ceramic type glazing, consult the glazing manufacturer’s glazing instructions for glass, caulking and/or glazing tape requirements. Details will vary as required by glazing selections.
**Full glass with multiple lights: FG3**

- **Dimension “A”**
  - Dimension 6 13/16” (173 mm)
  - Dimension 6 1/4” (159 mm)

- **Dimension “B”**
  - Dimension 6 1/2” (164 mm)

- **11 1/4” (284 mm) to Bottom of Light**

- **3/8” Undercut**

*Dimensions shown are to Exposed Glass Size*

**Full glass (FG3) door lights**

Designation for a door with three (3) glass lights each separated by an integral rail. Glass sizes will vary with the size of the door.

**Glazing bead system**

- 1/4” (6 mm) thick glass lights are available as standard with the Steelcraft Dezigner® trim system.
- 1/2” (13 mm) thick insulated glass lights are available as an option with the Steelcraft Dezigner® trim system for insulated glass.
- Insulated glass lights thicker than 1/2” (13 mm) are available as an option with specially designed overlapping steel trim.
- Flush mounted steel trim not available on 14GA doors.
- Reinforcement Channels are used in all Full glass applications.

**Ordering nomenclature**

The door ordering nomenclature is suffixed with the letter: **FG3**.

**Door series available**

Full Glass FG3 kits are available for the following door series in all of their standard options and gauges: A14 Series.

**Special size doors**

Special glass sizes are available; however, A14 vertical stiles are always fixed at 6 13/16” wide regardless of the glass size.

The following critical dimension apply to A14 Series FG3 designs with multiple lights, based on typical door sizes (special sizes available). *Check your acknowledgement for the recommended GCS (glass cutting size) as certain hinges and other hardware options can affect sizes.*

Louver prep

Louver prep: -L
L, SL, B, A14, and H Series doors

Optional details

Louver (-L) door prep
Designation for a door with one (1) or two (2) louver cutouts with or without installed reinforcement channels.

Welded-in reinforcement channels are used on labeled applications or when specified on an order.

Louver provided by others.

Ordering nomenclature
The door ordering nomenclature is suffixed with the letter: -L.

Special size doors
Standard policy for special size doors is the next smaller.

Cutouts available
Standard policy for special size doors is the next smaller.

Labeled louvers
See Fire rated section for approvals. Channels are used on all labeled door.

Reinforcement channels

Note: For fire rated applications using ceramic type glazing, consult the louver manufacturer’s glazing instructions for louver, caulking and/or glazing tape requirements. Details will vary as required by glazing selections.

General information

General frame information
The Steelcraft Architectural Stick Systems are designed to fit virtually all construction requirements for commercial building applications. These frame assemblies are fabricated (cut and welded) from various framing components, to meet a wide range of architectural requirements based on aesthetics, functionality, and durability. These frames and their components are specifically designed to meet the high usage levels of all commercial and institutional buildings.

This section of the manual is designed to give an overview of the flexibility available in the Steelcraft Architectural Stick Systems. For maximum flexibility and functionality, the perimeter framing (open sections which attach to the wall systems) is available in several frame series. Anchorage to the wall and floor may vary from the details shown in the applicable frame Specification Sheets.

The Steelcraft Architectural Stick Systems are available in the following frame series:

- **Flush Frames (F and FN Series):** Available as transom light/panel, side light/panel, transom and side light/panel, borrowed lights and frames with corner enclosures.

- **Drywall Frame (DW and K Series):** Available only as borrowed lights. These frames are KD (knock down).

- **Multi-Use Frames (MU Series):** Available as transom light/panel, side light/panel, transom and side light/panel, borrowed lights and entrance frames with corner enclosures.

Usage and application
To help simplify the use, selection and specification of Steelcraft framing systems, the following guidelines for base material selection can be used:

**Material gauge:** the following base material thickness are available:

- 16 gauge (1.3 mm): for Heavy Commercial and Institutional applications with high usage.

- 14 gauge (1.7 mm): for Extra-heavy Commercial and Institutional applications with potential of extremely high usage.

**Material selection:** in addition to the thickness of base material, the following base material types of metal are available:

- **Cold Rolled Steel (CRS)** conforming to ASTM A1008 and ASTM A568 recommended for interior opening with normal humidity exposure.

- **Hot-Dip Galvannealed Steel** conforming to ASTM A924 and ASTM A653 recommended for exterior opening or interior openings with high humidity.

Installation
Installation of all Steelcraft Framing Systems shall conform to the published Steelcraft installation instructions, SDI 105 Recommended Installation Instructions for Steel Frames. All fire rated frames must be installed in accordance with NFPA Pamphlet 80, and/or the local Authority Having Jurisdiction.

Glaze and seal all exterior elevations, or interior elevations subjected to high humidity exposure, in accordance with HMMA’s Tech Note (HMMA820-TN03-07), Guidelines for Glazing Hollow Metal Transoms, Sidelights, and Windows.
Introduction

“Stick Sections”, which are lengths of component frame material, are used to produce transom, transom & sidelight, sidelight and borrowed lights. The components are cut to length, notched and/or mitered, assembled and welded into an assembly to meet the requirements and specifications of the opening. The individual sections and the welded assembly can be fabricated at the factory or at the distributor’s fabrication shop.

This publication is designed to show the assembly flexibility, and the components along with general cutting and assembly details. Other details include methods of splicing (for a frame when it exceeds shipping limitations), and other miscellaneous details.

General elevations information

1. Standard components are either open (anchoring into the wall), or closed (mullions and dividers) sections.
2. Components are available in 16 and 14 gauge non-galvannealed or optional galvannealed steel (except as noted otherwise).
3. Components are available as either single or double rabbet. For the purpose of simplicity, all details are shown as double rabbeted.
4. Hardware preparations and reinforcements are in accordance with ANSI A250.6. Locations are in accordance with ANSI/DHI A115.
5. All sill sections (members attached to the floor) are recommended to be galvannealed steel.
6. Closed sections are shown for 3 ¾" (95 mm) jamb depth. 3" (76 mm) jamb depth section has two-piece.
7. All frame open sections have standard ½" returns except MU Series and 5 ¾" jamb depth which have ¾" returns.
### Typical elevations

**Transom frames**
Door frame having a transom bar and glass, panel or louver above the door opening. The transom bar separates the door opening from the transom opening. The frame height will vary but normally extends to the ceiling above.

**Ceiling height frame**
Door frame without a transom bar and a panel mounted above the door. The panel is normally the same thickness and material as the door. The frame height will vary but normally extends to the ceiling.

**Transom sidelight frame**
Door frame with transom bars and mullions dividing the entire frame into door and glass or panel openings. The frame height will vary but normally extends to the ceiling above.

**Sidelight frame**
Door frame with glass openings attached to one or both sides of the door opening. The sidelight portion can be partial height of the door opening or extend the entire height of the door. The frame is only the door height. If the frame is greater than the door height the frame is defined as a transom sidelight frame.

**Borrowed light**
Four-sided frame without a door opening, prepared for glass installation in the field. The borrowed light can be designed for one or multiple pieces of glass. The frame can be located in the wall off the floor or sit on the floor and extend to the ceiling above.
Architectural sticks

**TSF parts list**

Sticks are frame components used by the distributor to produce transom, transom/sidelight, sidelight and borrowed light frames. The components are cut to length, notched or mitered, assembled and welded into an assembly by the distributor to meet the requirements of the opening.

Sticks are commonly identified as TSF (Transom Sidelight Frame) sections. Each component has a unique TSF number that identifies it from another section. The frame jamb depth and gauge of steel are also used in the identification and ordering since the TSF number is only a basic identification number.

Stick components are available in 12' 1" (open sections), 10' 6" (closed sections) lengths and pre-sized lengths for 6' 8", 7' 0", 7' 2" and 8' 0" door heights. Sections can be blank (no cutouts), have strike or hinge preps to match doors and other three sided frames. See the exact TSF number for the hardware prep that is included.

Screw-in glazing beads

**Screw-in Bead**

**Description:** 1” wide x 3/8” high x 10’ 0” long. 18 gauge galvannealed glazing bead with square end cutoff. Beads are dimpled for, and supplied with #8 x 1 1/4” oval head self drilling screws.

**Nomenclature:** 3GB0080P012

**Standard Bead Installation**

1. Cut glazing bead to length required (Note: horizontal glazing beads run the full width of the openings and vertical glazing beads stop when they meet the horizontal beads).
2. Locate the bead from the stop as required. The normal location for ¼” glass is ¾”.
3. Using the glazing bead as a template, install screws through the pre-punched holes as required.
   - If an automatic screw gun driver is being used, the screws will drill the necessary hole in the frame section.
   - If an automatic screw gun driver is not being used, drill a .149” diameter hole (number 25 drill) in the frame and install the screws.
Elevations • Typical elevations

Typical elevations

Elevation 1: Transom and side panel or light assemblies

Notes:
Transom and Side Panel/Light Assemblies are supplied in a multitude of elevation designs and sizes. The elevation and related details shown above are for reference.

1. The most common elevations used are with lights (windows). Glass can be of varying thickness which must be specified.
2. Perimeter jambs and head can be supplied either factory die mitered or saw mitered. Corner connections are usually supplied as welded (SUA).
3. Removable transom bars (above the door opening) can be supplied (when specified), to allow for passage of large equipment or objects through the door opening. If required, this feature must be specified, and the unit above the door would be a panel and not a light (glass).
4. Transom panels (above the door) are the same thickness as the door, and can be supplied (when specified) as:
   - With Transom Bar (fixed or removable) as shown above.
   - Without the Transom Bar (fixed or removable) for aesthetics or functionality.
5. Removable mullions (separating double doors) can be supplied (when specified), to allow for passage of large equipment or objects through the door opening.
6. All joints between meeting frame members are to be welded and finished in accordance with ANSI A250.8-2017 (SDI 100).
7. If end jambs are specified as butt welded, frame must be installed in butted wall applications. Additional field notching by others will be required if the frame is installed in wrap wall applications.
Elevation 2: Partial side panel or light assemblies

Notes:
Partial Side Light Assemblies are supplied in a multitude of elevation designs and sizes. The elevation and related details shown above are for reference.

1. All notes shown on the previous page also apply to this type of elevation.

2. Since the side lights do not extend the full height of the mullion (which separate the door and transom area), care must be taken in fabricating the assembly.

3. Vertical mullions (separating the door and transom areas) must include provisions for glazing the sidelight unit, and can be accomplished in different ways:
   - **Closed section**: this section offers the best appearance, but must be supplied with an open frame throat to accommodate the wall construction below the side light. Available in F and FN Series only. See detail 4.
   - **Throat opening filler plate**: can be installed, welded and finished to provide a closed section in the partial sidelight area of the elevation. See detail 5.
   - **Double frame sections**: can be utilized. For these elevations, the door frame and sidelight are one unit, but there is a visible seam separating the units. See detail 6.
Elevations • Typical elevations

Field joint/splice details: Typical details

Notes:
Field joint/splices of elevations are required when the assembly is too large to be fabricated in one piece. Some of the reasons for this practice are as follows:
1. Transportation limitations
2. Handling issues related to either the job site or during fabrication
3. Installation limitations
Field joint/splice details: Corridor and room enclosures

Notes:

Corridor and room enclosures are accomplished with the use of "corner posts" (a frame stick component), and field joint/splices. The following notes apply.

1. All notes shown on the previous pages also apply to this type of elevation.
2. Corner posts are specially designed stick sections that allow for the connection of two Transom and Sidelight Elevations to be field joined to make a corner.
3. At this time, corner connections are not Fire Rated applications.
Transom panels without transom bars

Notes:
1. Transom panels are shipped loose for installation by others. Screws for attachment are supplied by Steelcraft.
2. Transom panels are phosphatized and finished with one coat of baked-on primer.
3. Transom panels are individually wrapped in corrugated cardboard with wood stripping on vertical edges of package together with metal banding.
4. Labeled panels are available in L18 door type only. For fire ratings and size limitations, see the section of this manual.
Installation:
1. Place panel in frame below channels and support angle.
2. Slide panel toward top of frame over channels until panel bottoms are on support angle.
3. Center punch thru holes on bottom edge of panel of each corner.
4. Drill .199” diameter hole (No. 8 drill) at center punches in support angle.
5. Install No. 12-24 flat head thread cutting machine screws to secure panel in place.

**NON-LABELED TRANSOM PANEL**

16 Ga. Reinforcing Channel spotwelded to jamb.
14 Ga. Flat Astragal spotwelded to Transom Panel.
16 Ga. Plate spotwelded to Panel.
3/16” Support Angle spotwelded to jamb.

(1) No. 12-24 Flat Head Thread Cutting Machine Screws.

**Labeled Transom Panel**

16 Ga. Channel spotwelded to jamb and Head.
14 Ga. Plate spotwelded to Panel.
14 Ga. Flat Astragal spotwelded to Transom Panel.
3/16” Support Angle spotwelded to jamb.

(2) No. 12-24 Flat Head Thread Cutting Machine Screws.
Splicing head and jamb sections
Sometimes it is necessary to splice jambs and/or heads to make a long section. Steelcraft recommends the following method of splicing. It is recommended that the splice always be located over the center of a vertical member.

1. Install splice channel into end of one section. Allow half of the splice channel to extend out of the section.
2. Weld the ends of the splice channel to the frame section.
3. Slide other frame section over the splice channel and weld to the channel.
4. Weld the face joint and grind smooth.

Removable mullions: Cutting, notching, and installation
Double rabbet removable mullions can be made from TSF-16 or any intermediate strike mullion. The details shown illustrate the cutting and notching required to make the removable mullion.

Notch mullion as shown
The mullion stiffener channel must be notched 13/16” deep at the bottom. See detail below.

Drill holes as shown. All other mounting holes will be match drilled at installation.

1-7/8” +1/32 -0
5/8” 15/64”
3/8”
.201” dia. hole
No. 7 drill, 2 places

Bottom Notch Detail
Detail is shown reversed for clarity.

 注: Frame must be 2” wider than a standard frame for a pair of doors.
Installation details

Jamb anchor applications

Wire anchor - masonry wall

<table>
<thead>
<tr>
<th>Double Rabbet</th>
<th>Single Rabbet</th>
</tr>
</thead>
</table>

Wire anchor can be used for jamb depths from 3" thru 14-3/4".

Existing masonry wall anchor

Frame is dimpled for a 3/8" - 16 flat head machine screw in the center of the soffit. Dimples are located approximately 30" on center.

The taper head anchorbolt is locked into position with the sleeve of the anchor bolt fitting into the soffit area around the dimple.

Single rabbet installation similar.

Frame anchors are used to support the frame between rabbet and wall, as well as to guide or support the anchor bolt. Typical anchors used are twist-in butterfly or weld-in hat or weld-in tube and strap anchors.

Wood or Steel Stud Anchor

Lock anchor into place as shown. Locate anchors at the top of each hinge reinforcement and the corresponding locations of the strike side.

Notes:

1. Installation shall conform to the published Steelcraft installation instructions, ANSI A250.11-2012 (formerly SDI 105) Recommended Erection Instructions for Steel Frames. Fire Rated Assemblies must be in accordance with NFPA Pamphlet 80. The AHJ is the final authority in issues related to the installation and use of installed Fire Rated Doors.

2. Wall anchors are in accordance with the Specification Sheets applicable to the frame series used.

3. Base (for vertical members) and Sill Anchors (for members along the floor), must be fastened to the floor with expansion shell, or rawl plugs and machine screws (ram-setting, shells, plugs and ram setting is by others). Adjust frame so the head is level, vertical members are plumb, and tighten the adjustable base anchors.
Base anchor applications

**Jamb Base Anchor**

- Spot or tack weld the attaching plate to and flush with the bottom of the jamb. Attach the adjustable base anchor to the attaching plate with sheet metal screws supplied with the anchor.
- The anchor is fastened to the floor with expansion shields or rawl plugs and machine screws or by Ram-setting (shields, plugs and ram setting by others). Adjust frame so head is level and tighten the adjustable base anchor screws.

**Mullion Base Anchor**

- Base anchors are attached to the floor at the locations required for the mullion. Be sure anchors are located at the exact locations of the vertical mullions. The frame is raised above the anchor and then lowered down on to the floor over the anchor.

**Sill Section Base Anchor**

- Anchors are recommended for sills that exceed 5' 0" in length. Attach the anchor to the floor following directions shown for mullion base anchors.

**Notes:**

1. Installation shall conform to the published Steelcraft installation instructions, ANSI A250.11-2012 (formerly SDI 105) Recommended Erection Instructions for Steel Frames. Fire Rated Assemblies must be in accordance with NFPA Pamphlet 80. The AHJ is the final authority in issues related to the installation and use of installed Fire Rated Doors.
2. Wall anchors are in accordance with the Specification Sheets applicable to the frame series used.
3. Base (for vertical members) and Sill Anchors (for members along the floor), must be fastened to the floor with expansion shell, or rawl plugs and machine screws (ram-setting, shells, plugs and ram setting is by others). Adjust frame so the head is level, vertical members are plumb, and tighten the adjustable base anchors.

Hurricane resistant openings • General test Information

General test Information
Steelcraft doors and frames are designed for virtually all construction requirements in commercial building applications. Their construction, durability and flexibility have been proven in both operation and physical testing of all types.

Storm Resistance H and HE Series
The Hurricane (H and HE Series) exterior doors are suitable for installation in all types of building construction, but are specifically designed to resist cyclic and static wind pressures, and windborne debris impact loads, as prescribed by the Florida Building Code. The continuously bonded cores and full height mechanically interlocked edge seams provide attractive, flat and very durable doors to the commercial construction industry. Many options are available in this product series including edge construction, core variations and finishes.

Approvals and Geographic applications
For up to date online Approvals and instructions to access, go to Steelcraft.com > Support > Steelcraft > Selection, Usage, and Approvals.

The Authority Having Jurisdiction is the final authority in issues related to the installation and use of any building products. Steelcraft has conducted extensive testing on various product configurations to meet the severe storm applications related to coastal areas exposed to the ravages of extreme high windstorm systems. Inland and Coastal storm regions are designated by FEMA and local codes. Products and approvals fall into the following categories:

- **Inland Regions with less severe exposure to windstorm damage.** Tests and approvals are based on structural uniform load methods. Several standard frame and door constructions have been successfully tested to meet the requirements for Inland Regions.
- **Wind-Borne Debris (Coastal) Regions with severe exposure to storm damage.** Tests and approvals are based on the Florida Building Code Test Protocols for High Velocity Hurricane Zone (HVHZ) TAS 201, TAS 202 & TAS 203. Steelcraft H Series door constructions have been tested and meet the requirements for Coastal Regions.
- **Enhanced Hurricane Protection Area (EHPA):** typically found in educational facilities, constructed in accordance with the State Requirements for Educational Facilities (SREF) and Florida Building Code. EHPA requirements include resistance to higher windload pressures and windborne debris impacts.
- Steelcraft H Series door assemblies have been tested and meet the requirements for EHPA.
- Refer to the Hurricane Resistant Approval pages of this manual for applicable products.

Usage and application
To help simplify the use, selection and specification of Steelcraft storm resistant door products, the following guidelines for base material selection can be used:

**Material Gauge:** The following base material thickness values were taken from the Underwriters Laboratories, Inc. publication for gauge number and equivalent thickness and describe the sheet steel products available from Steelcraft:

- **H and HE Series doors:** 16 Gauge [0.053” (1.3 mm)] for Extra Heavy Commercial and Institutional applications having the potential of very high use.
- **H Series doors:** 14 Gauge [0.067” (1.7 mm)] for Extra Heavy Commercial and Institutional applications with extremely high use.

**Material Selection:**
- Galvanized Steel: conforming to ASTM A924 and ASTM A653 is standard on all H and HE Series doors.

Installation
Installation of all Steelcraft frames and doors shall conform to the published Steelcraft installation instructions, ANSI A250.11-2012 (formerly SDI 105) Recommended Erection Instructions for Steel Frames and HMMA 840.

Installation of all H and HE Series doors must conform to corresponding Miami-Dade County Notice of Acceptance (NOA) and/or the Florida Building Code (FBC) statewide approval.

All Fire Rated doors must be installed in accordance with the National Fire Protection Association Pamphlet 80 (NFPA 80), and/or the local Authority Having Jurisdiction.

See page 205 under “Design pressure ratings and hardware configurations” for online resource links to the most current approvals.

Sizes and performance
All doors and frames are manufactured and supplied to meet the dimensional standards and performance levels as published in ANSI A250.8-2017 (SDI 100).

Special size products are available to meet the unique construction, performance and aesthetic requirements of the architectural community. Contact Steelcraft for those requirements.
H16 and H14 Series flush doors

About the product
The H16 and H14 Series doors have been specifically designed and tested to meet the performance-based provisions of the Florida Building Code (FBC) while providing architects, designers and building owners with the broadest choices for their specific applications.

Specifiable options include glass lights, transom and sidelights, louvers, exit hardware, cylindrical or mortise single point locks, as well as a variety of door core and edge construction options.

All H Series doors have been tested to protocols TAS 201, 202 and 203, indicating their ability to withstand the missile impact, structural load and cyclic wind pressure tests prescribed by the Codes.

Approvals, design pressure ratings and hardware configurations
Design Pressure Ratings are based on ongoing testing for door, frame and hardware configurations. Applications are limited to the configurations tested.

For up to date online Approvals and instructions to access, go to http://us.allegion.com/en/home/products/categories/doors-and-frames/steelcraft-h.html. Go to Approvals.

The Authority Having Jurisdiction is the final authority in issues related to the installation and use of any building products.

Features and benefits
Steelcraft's H Series doors offer the following standard unique features, which enhance long term performance and durability:

1. **A-60 Galvannealed steel** face sheets
2. **Core Systems** that enhance structural integrity:
   - **Honeycomb** (Standard): 1" (25 mm) cell kraft honeycomb configuration that increases structural integrity while reducing overall weight
   - **Polystyrene** (optional): enhanced thermal performance
   - **Polyurethane** (optional): extreme thermal performance
   - **Mineral Board** (optional): rigid, temperature rise control
   - **Steel Stiffened** (optional): welded hat section stiffeners
3. **Full Height, Epoxy Filled Mechanical Interlock Edges** provide structural support and stability the full height of the door edges. Available edge options:
   - **Visible Edge Seam (standard)**: full height, epoxy filled mechanical interlocked edges
   - **Filled Edge Seam (optional add to standard)**: seam filled with structural adhesive and dressed smooth. Includes tack welds above and below edge cutouts for hinges, locks, etc.
   - **Welded Edge Seam (optional add to standard)**: intermittently welded using 1" long welds, then seam filled with structural adhesive and dressed smooth. Option available on L18, L16 and L14 doors.
4. **Full Height Lock Side Reinforcement Channel** ensures structural stability and locking hardware functionality under extreme pressure conditions.
5. **Universal Hinge Preparations** (patented) allow for easy field conversion from standard weight .134" (3.3 mm) hinges to heavy weight .180" (4.7 mm) hinges.
6. **14 Gauge [0.067" (1.7 mm)] Top and Bottom Channels** provide stability and protection for the top and bottom edges from abuse.
7. **¾" undercut** is standard on all H Series doors, to accommodate hurricane code requirements.
8. **Beveled Hinge and Lock Edges** allow for tighter installation tolerances, ensure easier operation and eliminate binding and sticking.
9. **Recessed Dezigner™ Glass Trim** provides a clean, neat and flush finish with the door surface.
10. **Screwed-in top caps** provide additional weather protection to exclude water and debris from exterior outswing doors.

Specification compliance
1. Door construction for Steelcraft H Series full flush doors meets the requirements of ANSI A250.8-2017 (SDI 100).
2. Hardware preparations and reinforcements are in accordance with ANSI A250.6-2003 (R2009). Locations are in accordance with ANSI/DHI A115.

Florida building code label
A Florida Building Code Label is applied to all H Series doors. An optional Miami-Dade County label is also available.

Fire ratings
Steelcraft H Series doors meet fire rating requirements. They are listed for installations requiring compliance to both neutral pressure testing UL-10B and positive pressure standard UL-10C.
Hurricane resistant openings • H16 and H14 Series flush doors

Cores

Rigid Honeycomb Core

- 1" (25 mm) cell, 99 pound Kraft honeycomb
- Honeycomb surfaces sanded for maximum adhesion
- Impregnated with phenolic resin (resists mildew and vermin)
- Laminated to both face sheets with contact adhesive
- Assembled door is run through high pressure pinch rollers, achieving ultimate bond

Optional Polystyrene Core

- 1 pound (453.6g) per ft³ density slab
- Laminated to both face sheets with contact adhesive
- Labeled applications

Optional Polyurethane Core

- 1.8 pound (816.5g) per ft³ density slab
- Laminated to both face sheets with contact adhesive
- Non-Labeled applications

Optional Mineral Fiber Board Core

- TH Series 250°F (121°C) or 450°F (232°C) Temperature Rise Hurricane door

Optional Steel Stiffened Core

- Stiffeners welded to inside of face sheets
- Located 6" (152.4 mm) on center
- Weld spacing 6" (152 mm) maximum along the full height of each stiffener
- Areas between stiffeners filled with 1 pound (453.6g) per ft³ density fiberglass batt

STANDARD Edge Construction

- Beveled hinge & lock edges
- Full height mechanical interlock with epoxy adhesive
- Visible edge seam standard
- Seamless edge optional

STANDARD Rigid 14 gauge End Channel Construction

- 14 gauge inverted galvannealed top & bottom channels
- Projection welded to both face sheets
- For optional caps, see "Weather seals" on page 81

Standard hardware preparations

- Universal mortise hinge prep
- 6IL lock preparation
- Inactive leaf: ASA strike preparation
- Optional 14 gauge closer reinforcement

Standard: mortised and reinforced for

- Patented Universal hinge preparations allow for easy field conversion from standard 4 ½" (114 mm) x .134" (3.3 mm) standard weight hinges to 4 ½" (114 mm) x .180" (4.7 mm) heavy weight hinges. Optional hinge preparation for 5" (127 mm) x .146" (3.7 mm) standard weight hinges or for 5" (127 mm) x .190" (4.8 mm) heavy weight hinges is also available.
- The cylindrical 161, 61L and mortise 86 lock preps are the most commonly used active leaf preparations. The 4 ¾" (124 mm) strike prep is the most commonly used inactive leaf preparation.
- Optional reinforcements for surface closers are available.

Product Selection

Door Sizes and ANSI A250.8 Conversions

Steelcraft product selection for H Series doors has been matched to SDI designations for Level and Model. Recommended minimum frame gauge also applies to the frequency of operation of the opening.

Code Compliance

- Florida Building Code test protocols TAS 201, TAS 202 & TAS 203.
  - A mylar Florida Building Code label is included as standard
  - Optional mylar Miami-Dade County label
Door edge construction

Optional Edge Seams available in the L Series doors:
- **H:** Standard feature includes visible edge seams with full height interlocked edges.
- **HF:** The mechanical edge seam is filled and dressed smooth prior to applying the factory primer.
- **HW:** The mechanical edge seam is welded and dressed smooth prior to applying the factory primer.

**Standard visible edge seam**

**H Series Visible Seam Features**
- Full height mechanical interlock
- Interlock filled with epoxy adhesive
- Visible edge seam

**Optional seamless edge**

**HF Series Seam Filled Features**
- Standard Visible Edge Seam is tack welded above and below edge cutouts for hinges, locks, etc.
- Edge Seam is then filled with structural adhesive and dressed smooth
- No visible edge seam

**HW Series Seam Welded Features**
- Standard Visible Edge Seam is intermittently welded using 1" long welds
- Edge Seam is then filled with structural adhesive and dressed smooth
- No visible edge seam

Glass light options
(Refer to the Lights section for further details and options)

**Dezigner® Trim**
- Standard for ¼" Thick Glass
- Optional for ½" Thick Glass

**Typical Optional Overlapping Steel Trim for Glass Over ¼" to ½" or ¾" to 1" Thick**

Note: Glazing type and thickness vary per job requirements.

**Note:**
1. Glazing material and methods of glazing are subject to approval by applicable authorities and may change without notice. Refer to the applicable product approvals.
2. Doors used in elevations must use ½" or ¾" glass only per NOA.
HE16 Series embossed doors

About the product

The HE16 Series embossed panel doors have been specifically designed and tested to meet the performance-based provisions of the Florida Building Code (FBC) while providing architects, designers and building owners with the broadest choices for their specific applications.

Specifiable options to meet application, specification and performance requirements include mechanical and electrical hardware preparations for exit hardware, cylindrical or mortise single point locks and double locks. No glass lights are allowable.

All HE16 Series doors have been tested to protocols TAS 201, 202 and 203, indicating their ability to withstand the missile impact, structural load and cyclic wind pressure tests prescribed by the Codes.

Design pressure ratings and hardware configurations

Design Pressure Ratings are based on ongoing testing for door, frame and hardware configurations. Applications are limited to the configurations tested. For up to date online Approvals and instructions to access, go to http://us.allegion.com/en/home/products/categories/doors-and-frames/steelcraft-h.html. Go to Approvals.

The Authority Having Jurisdiction is the final authority in issues related to the installation and use of any building products.

Features and benefits

Steelcraft's HE16 Series doors offer the following standard unique features, which enhance long term performance and durability:

1. A-40 Galvannealed Steel face sheets.
2. Polystyrene Core (Standard): enhances the structural integrity of the door with enhanced thermal capabilities
3. Full Height, Epoxy Filled Mechanical Interlock Edges provide structural support and stability the full height of the door edges. Available edge options:
   - Visible Edge Seam (standard): full height, epoxy filled mechanical Interlocked edges
   - Filled Edge Seam (optional add to standard): seam filled with structural adhesive and dressed smooth. Includes tack welds above and below edge cutouts for hinges, locks, etc.
   - Welded Edge Seam (optional add to standard): intermittently welded using 1” long welds, then seam filled with structural adhesive and dressed smooth. Option available on L18, L16 and L14 doors.
4. Full Height Lock Side Reinforcement Channel ensures structural stability and locking hardware functionality under extreme pressure conditions.
5. Universal Hinge Preparations (patented) allow for easy field conversion from standard weight .134" (3.3 mm) hinges to heavy weight .180" (54.7 mm) hinges.
6. 14 Gauge [0.067" (1.7 mm)] Inverted Top and Bottom Channels provide stability and protection for the top and bottom edges from abuse.
7. ¾" undercut is standard on all H Series doors, to accommodate hurricane code requirements.
8. Beveled Hinge and Lock Edges allow for tighter installation tolerances, ensure easier operation and eliminate binding and sticking.
9. Screwed-in top caps provide additional weather protection to exclude water and debris from exterior outswing doors.

Specification compliance

1. Door construction for Steelcraft HE16 Series embossed panel doors meets the requirements of ANSI A250.8-2017 (SDI 100).
2. Hardware preparations and reinforcements are in accordance with ANSI A250.6-2003 (R2009). Locations are in accordance with ANSI/DHI A115.
3. Door construction for the HE16 Series embossed panel doors meets ANSI A117.1-1998 (ADA) requirements for minimum 10" (254 mm) bottom rail height measured from the floor.

Florida building code label

A Florida Building Code Label is applied to all H Series doors. An optional Miami-Dade County label is also available.

Fire ratings

Steelcraft HE16 Series doors meet fire rating requirements. They are listed for installations requiring compliance to both neutral pressure testing UL-10B and positive pressure standard UL-10C.
Cores

**Insulated Core**
- 1 pound (453.6 g) per ft\(^3\) density slab
- Preferred for extreme temperature variations
- Laminated to both face sheets with contact adhesive
- Assembled door is run through high pressure pinch rollers achieving ultimate bond

**Standard Rigid 14 gauge End Channel Construction**
- 14 gauge inverted galvannealed top & bottom channels
- Projection welded to both face sheets
- For optional caps, see "Weather seals" on page 151

Standard Edge Construction
- Beveled hinge & lock edges
- Full height mechanical interlock with epoxy adhesive
- Visible edge seam standard
- Seamless edge optional

General information
The Paladin™ Series door systems are specifically designed and tested to conform to the Federal Emergency Management Agency (FEMA) 320 and 361 guidelines and ANSI ICC500 standards providing security and safety for tornado shelters and severe storm areas of refuge.

The PW14 Paladin™ Series doors include unique internal steel stiffeners which are welded to the face sheets. The full height mechanically interlocked edge seams and rigid end closures are welded and provide attractive and very durable doors.

The FP14 Paladin™ Series frames are designed for installation in either interior or exterior locations as a part of the wall framing process. Three sided steel frames are furnished in three pieces (two jambs and a head) which are anchored to the wall systems.

Approvals
For up to date online Approvals and instructions to access, go to http://us.allegion.com/en/home/products/categories/doors-and-frames/steelcraft-pw.html, then click Approvals.

The Authority Having Jurisdiction is the final authority in issues related to the installation and use of any building products.

Paladin™ Systems offer a range of hardware applications based on ongoing testing for door, frame and hardware configurations. Applications are limited to the configurations tested.

How are frames supplied
The connecting corners of the 3-piece frame include precision factory die miters and interlocking tabs and corner clips. The corner miters are specially designed to insure a tight closed corner connection when installed properly. There are two methods of furnishing 3-sided frames to the jobsite:

• Knock Down (KD): Frames are supplied in 3 pieces for assembly prior to installation at the jobsite by the installing contractor.
• Set-Up and Welded (SUA): Prior to arriving at the jobsite, the 3-sided frame (with factory miters) is assembled (at the distributor’s fabrication location, or by Steelcraft). The miters are welded (in accordance with ANSI A250.8-2017 [SDI 100]), finished and supplied to the jobsite ready for installation. SUA frames are shipped to the jobsite with temporary shipping bars attached.

Sizes and performance
All doors and frames are manufactured and supplied to meet the dimensional standards and performance levels as published in ANSI A250.8-2017 (SDI 100).

Special size products are available to meet the unique construction, performance and aesthetic requirements of the architectural community. Contact Steelcraft for those requirements.

Usage and application
To help simplify the use, selection and specification of Steelcraft Storm Resistance door and frame products, the following guidelines for base material selection can be used:

Material Gauge: the following base material thickness values were taken from the Underwriters Laboratories, Inc. publication for gauge number and equivalent thickness and describe the sheet steel products available from Steelcraft:

• 14 Gauge [0.067” (1.7 mm)] for Extra Heavy Commercial and Institutional applications with extremely high use.

Material Selection: in addition to the thickness of base material, the following base material types of metal are available from Steelcraft:

• Galvannealed Steel: conforming to ASTM A924 and ASTM A653 recommended for exterior opening or interior openings with high humidity.

Installation
Proper installation is very important in providing reliable doors and frames for life-safety.

1. Installers of Paladin products should be experienced and capable. See available installation instructions as needed. Standards and ICC500-2014 must be followed in this life safety product.
2. The following industry standards should be referenced and followed:
   - Installation of all Steelcraft frames and doors shall conform to the published Steelcraft installation instructions, ANSI A250.11-2012 (formerly SDI 105) Recommended Erection Instructions for Steel Frames and HMMA B40.
   - Installation of Paladin™ Systems must conform to corresponding Intertek opening requirements, in compliance with FEMA 361 and ANSI ICC500-2014.
   - All Fire Rated doors must be installed in accordance with the National Fire Protection Association Pamphlet 80 (NFPA 80), and/or the local Authority Having Jurisdiction.
3. Follow general instructions and videos in collaborative efforts from Steelcraft and SDI (for all Steel door and frame applications, not specific to Paladin).

Frames:
PDF of steps with images: “Steel Door Frame Installation in Masonry” www.steeldoor.org/pdf/steeldoorinstallationinmasonryconstruction.pdf

Installation video: www.steeldoor.org/videos.php#videos. Select “How to Install Frames in Masonry Construction”

Doors:
Door installation videos: www.steeldoor.org/videos.php#videos. Select “How to Install a Steel Door”

• Note in addition to checking for fire labels as stated in this video, check also for ICC500-2014/FEMA 361/320 labels on doors and frames.

Troubleshooting:
Troubleshooting videos: www.steeldoor.org/videos.php#videos. See Troubleshooting Videos section

4. For installation of hardware and accessories, follow applicable installation instructions from the manufacturer.

See "ICC 500-2014 and FEMA Approved Paladin Tornado Hardware Offering" on page 222 for online resource links to the most current approvals.
About the product
The Paladin™ PW14 Series Flush doors and FP14 Frame have been specifically designed, tested and approved to withstand extreme wind-load and flying missile impact. Unique engineered designs combined with the durability of superior corrosive resistant steel make Steelcraft PW14 Paladin™ Series Flush doors an excellent solution for added building protection from severe weather.

Specifiable options to meet application, specification and performance requirements include mechanical and electrical hardware preparations for exit hardware. The PW14 Paladin™ Door and FP14 Frame System has been designed and tested to address the requirements of FEMA 361/320 guidelines and ANSI ICC500-2014 standards to protect the general public from the extreme effects of tornados. For compliance with the standards, the PW14 Paladin™ Door and FP14 Frame must be supplied as a system.

System features and benefits
DOOR: PW14 Paladin™ Series Flush Door:
1. steel stiffened core construction with stiffeners welded to one face sheet and attached with epoxy to the opposite face sheet.
2. full height, epoxy filled mechanical interlock edges at lock and hinge edges with edge seams welded, filled and dressed smooth provide structural support and stability the full height of the door.
3. full height lock side reinforcement channel ensures structural stability under extreme pressure conditions.
4. universal hinge preparations (patented) allow for easy field conversion from standard weight .134" (3.3 mm) hinges to heavy weight .180" (54.7 mm) hinges.
5. 14 gauge (0.067") inverted top and bottom channels with additional 12 gauge (0.105") flush channel top cap.
6. custom undercuts. 3/4" maximum allowable undercut to finished floor is provided standard to allow for a 1/2" saddle threshold. Specify your undercut needs based on latching hardware, finished floor, threshold and whether your strike sits flush. Hardware installation instructions must be followed. Use the instructions that came with the product or search online at www.steelcraft.com. Required distance from bottom of door to top of strike (for rabbeted, or bumper, thresholds on WS, bottom of latch housing to top of strike):
   - Schlage LM9300: 1/8" min, 1/4" max
   - Von Duprin WS98/9927 & WS98/9957: 1/4"
   - The manufacturer’s strike must be used, cannot be unduly modified, and must be anchored/grouted into the slab.
   - For finished floors, strikes should sit on the finished floor and be anchored (LM) and/or grouted (WS) into the concrete slab securely.
   - For thresholds, cut a hole for the strike plate (LM) to sit flush with top of threshold (ADA), or cut strike lip (WS) to sit on or flush (ADA) with top of threshold. Cut slab 1" min below and 3/4" around the strike perimeter, then with threshold in place, grout full in the strike area, and embed the cup strike (WS) into the grout in the hole cut in the threshold, or anchor the strike plate (LM) after set. Note in using rabbeted, or bumper, thresholds with the WS, the bottom latch housing is mounted higher on door.
   - Hardware and concrete guidance above are Steelcraft recommendations only. Hardware and industry specific building standards must be followed and should take precedence, although any differences in recommendations should be investigated and understood.
7. beveled hinge and lock edges allow for tighter installation tolerances, ensure easier operation and eliminate binding and sticking.
8. factory applied baked-on rust inhibiting primer paint in accordance with ANSI A250.10-2011.
9. standard A-60 galvannealed steel face sheets for superior corrosion resistance on exterior openings

Specification compliance
1. Door construction for Steelcraft PW14 Paladin™ Series Flush doors meets the requirements of ANSI A250.8-2017 (SDI 100).
2. Hardware preparations and reinforcements are in accordance with ANSI/DHI A115.

ICC500-2014 / FEMA COMPLIANCE LABEL
Factory Label from Intertek (ITS/WHI) is applied to all PW14 Paladin™ Series Flush doors and FP14 Frame System.

Fire ratings
Steelcraft PW14 Paladin™ Series Flush doors meet the broadest fire rating requirements. They are listed and labeled by Intertek (ITS/WHI). Installations requiring compliance to both neutral pressure testing UL-10B and positive pressure standard UL-10C.

Paladin Flush doors and frames can be fire rated up to and including 3 hours.

Paladin Glass Light doors and frames can be fire rated up to and including 1 1/2 hours.
Tornado resistant openings • PW Series flush doors

Standard construction

- Polystyrene batting
- Steel stiffener
- Lock-side reinforcement channel

12 gauge [0.093" (2.3 mm)]

Standard PW14 Paladin™ series core

- Galvannealed Steel Stiffeners welded to one face sheet and attached with epoxy adhesive to the opposite face sheet
- 1 pound density insulation inserted between the steel stiffeners
- 12 Gauge (0.105") reinforcement channel at the lock edge

Standard Premium Edge Construction

- Beveled hinge and lock edges
- Full height mechanical interlock with epoxy adhesive
- Mechanical edge seam is welded and dressed smooth prior to applying the factory primer. No options
- Lock edge with 12 Gauge (0.105") channel

Standard Rigid End Channel Construction

- 14 gauge inverted galvannealed top and bottom channels
- Top channel includes an additional 12 Gauge (0.105") top channel.

Door Application and Usage

<table>

Standard hardware preparations (ICC500-2014 and FEMA 361/320 compliant)

Universal mortise hinge prep
Patented Universal hinge preparations allow for easy field conversion from standard 4 1/2" (114 mm) x 0.134" (3.3 mm) standard weight hinges to 4 1/2" (114 mm) x 0.180" (4.7 mm) heavy weight hinges.

- Optional preps for 5" (127 mm) x 0.146" (3.7 mm) standard weight hinges or for 5" (127 mm) x 0.190" (4.8 mm) heavy weight hinges.

- High frequency hinge prep is also available and is required with auto operators. For reinforcement requirements for automatic operators, see "High frequency hinge reinforcement F and FE Series" on page 79.

- The 12 gauge lock side reinforcement shown beside the center hinge prep supports the panic bar on a WS device.

**WS98/9927/9957**
Prep for Von Duprin Windstorm devices:
- 2-point WS98/9927(F)
- 3-point WS98/9957(F)

The 12 gauge lock side reinforcement provides support for installing the WS device with surface vertical rods.

Bottom latch housing mounts into standard 12 ga lock side channel reinforcement.

See Figure 11.1: PW-Series hardware preparations for reinforcement locations.

**Note:** Housing will be mounted higher on door for rabbeted threshold. See page 211, #6.

**LM9300**
Prep for LM9300 MultiPoint (3-pt).
- CVR (concealed vertical rod) assembly is installed at the factory
- Center latch is shown with 8" high cutout for astragal prep. Typical prep is 4 3/8" ASA prep. See "Hardware preparations" on page 235.

- See Figure 11.1: PW-Series hardware preparations for reinforcement locations.

**Inactive leaf ASA strike prep with astragal attached**
Mounting tabs for the ASA 4 3/8" (124 mm) mortise strikes are attached to the door edge for direct mounting

- Astragals, cut-out only for the flush mounting of the strike to the door. There are no tabs attached to the astragal. Note astragals can be used with LM9300 pairs but should not be used with panic exit devices. When not using astragals, the gap can be filled with Zero gasketing

Surface bolt reinforcement is provided for inactive leaves.

**Figure 11.1:** PW-Series hardware preparations
Tornado resistant openings - PW Series flush doors

**Standard 14 gauge [0.067" (1.7 mm)] with optional full width reinforcement**

20" closer reinforcements are provided.
- Full width surface closer
- Surface overhead holder/stop
- Surface Floor & Wall stops/holders

**Electrical Preps**
Options will be reviewed by engineering at the time of order and will not be available in OEW. The following options are available:
- Power transfer units (EPT2, EPT10)
- Electric hinge
- Electric door closer utilizes the same preps shown in "closers"
- Magnetic hold opens utilize the same preps shown in "closers." Must be outswing and must be located away from hardware/rod locations to avoid interference.
- Door position switch (round) must be mortised into edge or top of door
- Magnetic switch (rectangle) must be mounted to exterior or storm side only
- Auto operator allowed on exterior, or storm side, only and must use high frequency hinge reinforcement and 5" heavyweight hinges.

**Meeting edge details for pairs of doors**

**NOTE:** Review "ICC 500-2014 and FEMA Approved Paladin Tornado Hardware Offering" on page 222 for approved hardware, notes and restrictions.
Glass light options

Fully installed from the factory Glass lights with trim included in PV and PN label. Light designs without modification. Lights can be added to any Paladin door available in a 3-sided frame. Lights are not available in variable sizes or locations. Fire rated versions (PVF and PNF) are available up to 90 minutes. Narrow light is ADA compliant.

See “Paladin glass lights” on page 164 for further details and options, including care and instructions concerning your glass lights before and after installation.

- Standard 1” Thick Glass. Fire rated glass is slightly, but not noticeably, thicker.

Narrow light with Schlage LM9300 concealed rods lock and latch*

Vision light with Schlage LM9300 concealed rods lock and latch*

* Also available with WS98/9927 2-pt Panic Exit and WS98/9957 3-pt Panic Exit (same size and location glass)
Paladin handing

Correctly understanding handing in ordering and installing tornado products is critical to life safety. In referencing “Handing procedures diagrams” on page 11, use the following IMPORTANT rules when considering Tornado openings.

- The Exterior, or Outside, is always the Storm side (the side of the door that faces a storm). Typically this is the Key Side, but not always (e.g., not typical, but if the shelter is the hallway and a connected classroom is outside of the shelter, the outside of your door would face the classroom since that is the side facing the outside, or storm side, of the shelter).

- The Interior, or Inside, is always the Safe side (the side on the inside of your shelter or safe room). Typically this is the non-Key Side, but not always (e.g., not typical, but if the shelter is the hallway and a connected classroom is outside of the shelter, the inside of your door would face the hall since that is the side facing the inside, or safe side, of the shelter).

- Note that PW doors may be inswing or outswing when using lever trim. But PW doors with panic exit hardware will always be outswing with the panic bar on the safe side and the door opening out towards the Outside, or Storm side.

For glass light doors in 3-sided openings, use the following guide:

- The Inside, or Safe side of the door, is always signified by flat glass trim.
- Regardless of PV or PN light, the Outside, or Storm side, is always signified by inset glass trim.

Shutter handing

Most shutter applications should be ordered as straight handed.

- Straight handed shutters (Figure 11.2: Straight handed shutters): Shutters with glass in a 4-sided frame are always straight handed. If the shutter opening does not have glass, but is still installed into the rabbet nearest to the inside/shelter/safe side of the opening, then the shutter is still straight handed.

- Reverse handed shutters (Figure 11.3: Reverse handed shutters): Shutters without glass that are installed into the rabbet nearest to the storm side of the opening is reverse handed. This option would not have glass.
FP14 Series flush frames

About the product
The FP14 Paladin™ Series 3 Sided flush frames are designed to meet requirements of ICC500-2014 code, FEMA 361⁄320 guidelines, and ANSI compliance to protect the general public from the extreme effects of tornados. These frames are available in 14 gauge [0.067” (1.7 mm)] only. They are installed in both interior and exterior locations, and in virtually all types of buildings and wall constructions. These frames are to be installed as part of the wall framing sequence. They can be specified and supplied as KD (knock-down) for field assembly prior to installation or SUA (set-up and welded) for installation as a pre-welded unit. All FP14 Paladin™ Series frames include the ICC500-2014 / FEMA 361/320 Label.

Features and benefits
Steelcraft FP14 Paladin Series flush frames offer the following unique features which enhance long term functionality and durability:

1. 14 Gauge A60 galvannealed steel for superior corrosion resistance on exterior openings.
3. Patented universal hinge preparations allow for easy field conversion from standard weight .134” (3.3 mm) thick hinges to heavy weight .180” (4.7 mm) hinges.
4. Adjustable base anchors allow for installation adjustment when the floor is not level.
5. Factory applied baked on rust inhibiting

Specification compliance
1. Overall frame construction for the Steelcraft FP14 Paladin™ Series flush frames meets the requirements of ANSI A250.8-2017 (SDI 100).
2. Hardware preparations and reinforcements are in accordance with ANSI A250.6-2003 (R2009). Locations are in accordance with ANSI/DHI A115.

ICC500-2014 / FEMA COMPLIANCE LABEL
The FP14 Paladin Series flush frames meet fire rating requirements. They are listed by Intertek (ITS/WHI) installations requiring compliance to both neutral pressure testing UL 10B and positive pressure standard UL 10C. Refer to the Fire Rated Section of this manual for particular listings.

Hardware and concrete recommendations from Steelcraft are only guidelines. Hardware and industry specific building standards must be followed and should take precedence, although any differences in recommendations should be investigated and understood.

Fire ratings
Steelcraft FP14 Paladin Series Flush doors meet the broadest fire rating requirements. They are listed and labeled by Intertek (ITS/WHI). Installations requiring compliance to both neutral pressure testing UL-10B and positive pressure standard UL-10C.

Paladin Flush doors and frames can be fire rated up to and including 3 hours.

Paladin Glass Light doors and frames can be fire rated up to and including 1 1⁄2 hours.

Applications
FP14 Paladin Series flush frames are typically installed in wall construction types as defined in the chart below:

Tornado resistant openings • FP14 Series flush frames

General notes
1. Variations in jamb depths available in ¼" (3 mm) increments.
2. All FP Paladin™ Series Frames are supplied standard with Masonry T anchors for new masonry. For existing masonry, Tube and strap anchors welded in from the factory with punch and dimpled frames including approved anchor bolt. Anchors and bolts are designed and selected for maximum wall/frame engagement for Tornado applications. Additional information is available upon request.
3. FP Paladin™ Series Frames are to be installed as part of the framing sequence.
4. All frames are supplied with a factory applied baked-on primer for ultimate field paint adhesion.
5. Steelcraft provides Galvannealed steel for both interior and exterior applications.
6. Frames do not have silencer holes from factory; recommend self-adhesive type to be applied in the field.

Anchoring systems
All anchors are included with your order. Installation instructions will accompany your shipment. If you have questions, please contact technical support for Steelcraft.

See "Anchoring systems" on page 84 for drawings and general information on the FP anchors below:

New Masonry (CMU Block Walls)
- Masonry T anchors and adjustable base anchors are provided standard with your order when specifying new masonry shelter walls.

Existing Masonry (Concrete or CMU Block Walls)
- Tube and Strap anchors provided standard with punch and dimple frame prep and approved bolts from the factory when specifying existing masonry walls. You must specify shelter wall type when ordering to ensure the correct number of preps for your openings:
  - Concrete (tilt-up/pre-fab) walls (TSCONC)
  - Concrete-filled CMU block walls (TSBLOCK)
- When specifying a 4" face head, you will have a different bolt set than 2" face jams and heads
- Refer to installation instructions on your distributor customer portal under doors and frames.

Approvals

Openings with Von Duprin® and Schlage® hardware

The Paladin™ Series door system (PW14 Series doors and FP14 Series frames) are available in compliance with FEMA 361 and ANSI ICC500-2014 with factory attached ITS/WHI Intertek listed or approved opening labels in the configurations shown below.

For complete Assembly Approvals, see "ICC 500-2014 and FEMA Approved Paladin Tornado Hardware Offering" on page 222, or go online to Steelcraft PW Series and click on "Approvals" for a link to ITS/WHI Intertek website approvals.

The Authority Having Jurisdiction is the final authority in issues related to the installation and use of any building products.

Steelcraft's Paladin™ Series door system is tested as a complete door frame and hardware system. Door, frame and anchors must be ordered from Steelcraft.

When specified, ITS/WHI fire door labels are factory attached stating listings in accordance with UL10C Fire Resistance Ratings in the configurations shown below.

Stainless steel doors and frames

General information

About the product
Steelcraft Stainless Steel Doors (LS Series) and Frames (FS, KS & MS Series) are engineered to meet the architectural requirements for stainless steel doors and frames in building applications requiring exceptional corrosion resistance and/or high design appearance.

This LS Series 1 ¼” door construction combine unique product features to withstand harsh environments while providing exceptional design.

To meet application requirements, the door is available in single and double door sizes, with optional visions, louvers, fire ratings and a wide range of hardware preparations.

Steelcraft Stainless steel doors and frames are Hurricane approved and models have been acoustically tested up to STC 51 (addition of vision light and/or doors swinging in pairs reduce the STC performance).

Installation
• Installation shall conform to the published Steelcraft installation instructions, ANSI A250.11-2012 (formerly SDI 105) Recommended Erection Instructions for Steel Frames and NAAMM-HMMA B40-07.

Specification compliance
1. Stainless steel astm a666 and astm a167; type 304 or type 316
2. NAAMM-HMMA 866-12 Guide Specifications for Stainless Steel Hollow Metal Doors and Frames
3. NAAMM-HMMA 860-92 Guide Specifications for Hollow Metal Doors and Frames

Installation shall conform to the published Steelcraft installation instructions, ANSI A250.11-2012 (formerly SDI 105) Recommended Erection Instructions for Steel Frames and NAAMM-HMMA B40-07.

Features and benefits
All Steelcraft’s LS Series doors and FS, MS & KS Series frames are fabricated from 100% stainless steel both external and internal. Offered in two stainless steel alloys, 304 or 316, these Doors and frames provide excellent corrosion resistance, durability, performance, as well as a sleek aesthetic appearance.

Performance

Door: LS18 and LS16 Series:
1. Door Cores to suit various applications:
   • Polystyrene, Honeycomb or Polyurethane
   • Steel Stiffened available on quote basis
2. Gauge:
   • 18 gauge and 16 gauge (standard)
   • Heavier gauge available on a quote basis
3. Vertical Edge Seams: Seamless and Interlocking Edge.
4. Beveled Hinge and Lock Edges
5. Component Parts and Hardware Reinforcements
   • Made of 100% Stainless Steel

Frame: FS16, MS16, KS16 Series:
1. Gauge:
   • 16 gauge (standard)
   • Heavier gauge available on a quote basis
2. Component Parts, Reinforcements and Anchors: all made of 100% Stainless Steel.
3. Machine Mitered corners factory welded and refinished to match face trim with no visible seam.
4. Knock-Down (KD) frame options available.
5. Anchors: masonry T, wire anchors, metal stud, existing wall anchors.

Ratings: actual tests conducted on stainless steel assemblies.
1. Fire-rated up to Class A (3 hour)
2. Sound-rated Door and Frame Assemblies up to STC 51
   • Seals not included
3. Hurricane approved (NOA Dade County Florida)

Durability
1. Exceptional corrosion resistance: conforming to ASTM A666:
   • Type 304 Alloy: typical corrosion resistance.
   • Type 316 Alloy: heavy duty corrosion resistance.

Fire ratings
Steelcraft Stainless Steel Series doors and frames meet the broadest fire rating requirements. They are listed for installations requiring compliance to both neutral pressure testing (ASTM E152 and UL -10B) and positive pressure standards (UL-10C).
Typical hardware locations
Doors and frames with 3 hinges (1 ½ pair)

General information
Steelcraft Stainless Steel doors and frames are designed to fit virtually all construction requirements for commercial and institutional building applications. Doors and Frames are shipped separately. All stainless steel product is packaged with protective pad and crated in heavy wood containers. Proper installation of Door and Frame Systems is critical to insure proper performance. It is imperative that materials are inspected thoroughly for shipping damage. If damage has occurred en route, please note it on the bill of lading and shipping documents.

Sizes and performance
All stainless steel doors and frames are manufactured and supplied to meet the dimensional standards and performance levels as published in ANSI A250.8-2014 (SDI 100).

Custom options
Special size products are available to meet the unique construction, performance and aesthetic requirements of the architectural community. Contact Customer Care for these requirements at: 1-877-671-7011 (ask for estimating) or email Steelcraftestimating@allegion.com

On-site storage
Store doors under cover, in a dry area and in an upright position. All ferrous metal products should be stored where they will not be exposed to, or come in contact with water. This is particularly true of products such as doors, which have large flat surfaces on which water may collect if they are stacked horizontally. Do not use non-vented plastic or canvas. These materials create a humidity chamber, which promotes blistering and corrosion. Place no more than 5 doors in a group, with all material on planking or blocking at least 4 in. (100 mm) off the ground, 2 in. (50 mm) off a paved area or the floor slab. Provide a least ¼ in. (6.4 mm) space (wood strip).

Installation
Installation of all Steelcraft frames and doors shall conform to the published Steelcraft installation instructions, ANSI A250.11-2012 (formerly SDI 105) Recommended Erection Instructions for Steel Frames and HMMA 840. All Fire Rated doors must be installed and maintained in accordance with the National Fire Protection Association Pamphlet 80, and/or the local Authority Having Jurisdiction.
Sound openings

General information
Doors are often used to block the passage of sound from one area to another. The sound rating of a door is expressed as Sound Transmission Class (STC). The higher the STC ratings, the better the performance.

STC (Sound Transmission Classification)
The Sound Transmission Class (STC) is a single-number rating of a material's or an assembly's ability to resist airborne sound transfer at the frequencies 50-5000 Hz. In general, a higher STC rating blocks more noise from transmitting through a door opening.

The sound transmission loss performance is measured using ASTM E 90 "Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements" and calculated according to ASTM E 413 "Classification for Rating Sound Insulation."

The AST ME90 test is conducted on a 3070 door and frame assembly in a laboratory. The assembly is built into a wall, dividing the sound-proof acoustical test room in to two sections. Sound is introduced into the source section of the room at different frequencies and the amount of sound, transmitted through the unit is recorded in decibels.

A door assembly is given an STC rating per ASTM E413 by measuring its Transmission Loss over a range of 21 different frequencies between 50 and 5000 Hz. Measured Transmission Loss (number of blocked dB) at each frequency gets rounded and adjusted with standardized coefficients. The STC rating is than calculated based on formula, when certain conditions of sound deficiencies have been met.

Products
Steelcraft offers different types of door, frame and gaskets for the various STC ratings. The standard Steelcraft door (honeycomb, styrene or STC stiffened core) will provide a range of STC ratings. The gauge of the door does not normally affect the STC rating. The core and the gaskets used are the determining factors.

The installation is also a critical factor in the performance. The gaskets must meet the face of the door and sill (floor), making a good seal. In addition any construction that passes from one area to another will also carry sound. As an example, heating and air conditioning ducts will carry sound from one area to another.

STC Tested doors
The following STC ratings have been achieved with standard Steelcraft door and frame products with the inclusion of gasket seals.

<table>

Gasket Notes (supplied by others):
1. Perimeter Seals: Zero #475 applies to the stop of the head and jambs.
2. Door bottom: Zero #367, surface applied.
4. Cushion Spring: Zero #119W.

B Series STC - Stiffened core construction

Standard B Series core:
- 20 gauge stiffeners
- Stiffeners welded to inside of face sheets
- Vertical interior webs located 6" (152 mm) apart
- Welded to face sheet 5" (127.6 mm) on center
- Stiffeners welded to each other at the top and bottom
- Areas between stiffeners filled with nominal 1 pound (453.6g) per ft³ density fiberglass batt insulation

Hardware options
Note: Hardware preps and internal reinforcements will vary due to acoustical requirements.

Hinges:
- Template hinge preparations for 4 ½" or 5" heavy weight butt hinges
- Continuous hinge preparations available when specified.

Locks:
- Cylindrical 161, 61L and Mortise B6 (sectional or escutcheon trim) lock preps are available for single door and active leaves.

Exit devices: preps are available as follows:
- Single doors = Rim or Mortise exit devices
- Inactive leaves = Surface Vertical Rods

Closers:
- Surface applied closer reinforcements are available in both doors and frames.
- Concealed closer preparations are not available.

Strikes:
- Strikes preparations will accommodate specified locking hardware.

Electric hardware:
- Electric Hinge preparations are available as specified.
- Electric lock preparations with conduit are available as specified.
- EPT (Electric Power Transfer) preps are not available.
Sound transmission ratings

Sound transmission classification (STC) ratings are a measurement of the amount of sound passing through a building product. To help understand the STC ratings, the following table compares the ratings of various building products:

<table>
<thead>
<tr>
<th>Product Description</th>
<th>STC</th>
</tr>
</thead>
<tbody>
<tr>
<td>Doors Hollow core wood door</td>
<td>19</td>
</tr>
<tr>
<td>Doors Solid core wood door</td>

</tr>
<tr>
<td>Wall 6” concrete block</td>
<td>43</td>
</tr>
<tr>
<td>Wall 2” x 4” wood stud with ½” gypsum board</td>
<td>34</td>
</tr>
<tr>
<td>Wall 2½” steel stud with (2) layers of ½” gypsum board each side</td>
<td>46</td>
</tr>
</tbody>
</table>

Application details

The following door, frame and gasket details represent the standard products tested.

- Zero #560 for non-ADA applications. Used with standard ¾” undercut.
- Zero #566 for ADA applications - door requires special undercut.

Sound measurements

The following is a quick reference to the decibel ratings and hazardous time exposures of common sounds:

<table>
<thead>
<tr>
<th>Typical Decibel</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Lowest sound audible to the human ear</td>
</tr>
<tr>
<td>30</td>
<td>Lowest sound audible to the human ear</td>
</tr>
<tr>
<td>40</td>
<td>Living room, quiet office, bedroom away from traffic</td>
</tr>
<tr>
<td>50</td>
<td>Light traffic at a distance, refrigerator, gentle breeze</td>
</tr>
<tr>
<td>60</td>
<td>Air conditioner at 20 feet (6 meters), conversation, sewing machine</td>
</tr>
<tr>
<td>70</td>
<td>Busy traffic, office calculator, noisy restaurant. At the 70 decibel level, noise may begin to affect your hearing if you’re exposed to it constantly.</td>
</tr>
<tr>
<td>80</td>
<td>Subway, heavy city traffic, alarm clock at two feet, factory noise. These noises are dangerous if you are exposed to them for more than eight hours.</td>
</tr>
<tr>
<td>90</td>
<td>Truck traffic, noisy home appliances, shop tools, lawn mower. As loudness increases, the “safe” time exposure decreases; damage can occur in less than eight hours.</td>
</tr>
<tr>
<td>100</td>
<td>Chain saw, stereo headphone, pneumatic drill. Even two hours of exposure can be dangerous at 100dB; and with each 5 dB increase, the “safe time” is cut in half.</td>
</tr>
<tr>
<td>120</td>
<td>Rock band concert in front of speakers, sandblasting, thunderclap. The danger is immediate; at 120 dB exposure can injure your ears.</td>
</tr>
<tr>
<td>140</td>
<td>Gunshot blast, jet plane. Any length of exposure time is dangerous; noise at 140 dB may cause actual pain in the ear.</td>
</tr>
<tr>
<td>180</td>
<td>Rocket launching pad. Without ear protection, noise at this level causes irreversible damage; hearing loss hearing is inevitable.</td>
</tr>
</tbody>
</table>
Thermal break frames

FT Series

About the product
FT frames are separated at the stop by a durable polymer extrusion that serves as a thermal break.

FT Series 3-sided frames are designed to meet requirements for light to maximum duty applications in both commercial and institutional buildings. Although the most common use is exterior masonry opening, these frames are installed in both interior and exterior locations, and in virtually all types of buildings and wall constructions. These frames are to be installed as part of the wall framing sequence. They can be specified and supplied as KD (knock-down) for field assembly prior to installation or welded for installation as a complete unit.

Installation
1. Installation shall conform to the published Steelcraft installation instructions, ANSI A250.11-2012 Recommended Erection Instructions for Steel Frames and HMMA 840.
2. Care should be taken throughout the installation process to maintain the thermal break designed into anchors and reinforcements.

Application
FT Series frames are best used for energy cost savings on exterior openings or interiors where temperature control is desired between locations. They are typically installed in wall construction types as defined in the table below.

Features and benefits
Steelcraft FT (Frame Thermal) Series frames offer the following unique features, which enhance long term functionality and durability:

1. Thermal Break: By separating the frame along the stop, the transfer of exterior heat or cold into your building is reduced. FT frames provide 95% better resistance to thermal conductivity over non-thermal break frames.
   - Lower thermal costs and improved comfort
   - Jamb and Head components are each factory assembled, with 3-sided frames supplied KD or Face welded
   - Uses Galvannealed A-60 steel
   - Frame and weld-in anchors are specially designed to achieve a true thermal break

2. FT thermal separator: This durable polymer extrusion provides a more secure barrier over time and is more durable in freezing conditions compared to traditional vinyl separators.

3. Die-mitered corner connections: Die-mitered corner connection at the head and jamb insure an attractive, tight and closed mitered connection. The miter includes 4 corner tabs designed with concealed connection eliminating the need for continuous profile welding.

4. Patented universal hinge preparations allow for easy field conversion from standard weight .134" (3.3 mm) thick hinges to heavy weight .180" (4.7 mm) hinges.

5. Factory applied baked on rust inhibiting primer in accordance with ANSI A250.10-2011.

Specification compliance
1. Frames tested to ASTM C1363 for Thermal Performance, with a U-factor of 0.45. Zero 525 Rabbetted Aluminum Thermal Break Threshold was used in this test. See "Anchoring and installation notes" for options.
2. Overall frame construction for the Steelcraft FT Series frames meets the requirements of ANSI A250.8-2017.
3. Hardware preparations and reinforcements are in accordance with ANSI A250.6-2003 (R2009). Locations are in accordance with ANSI/BHMA.
4. FT frames are not fire-rated.

**FT Thermal separator**
Separates the door side and the non-door side of the frame. The 3-pieces are joined with screws as shown.

- While our separator is durable, care should be taken in transporting and handling until frame is installed, especially with longer components and wider jamb depths.
- Do not stack welded frames in storage or in transport
- Do not weld on or near separator
- Separator material is not paintable

**Hardware interference**
Specific hardware preps can be reviewed by Steelcraft Engineering upon request. Installation may be limited; it is best to avoid attaching to the soffits. If unavoidable, review the drawing and dimensions above and become familiar, taking special care when drilling or attaching to this area. Steelcraft is not responsible for issues caused by modification, reinforcement or hardware installation outside of the factory.

FT Thermal Break frames must maintain the thermal separation between the door side and the non-door side of the frame.

Anchoring and installation notes

1. **FT Series commercial and Institutional frames** are specially designed to maintain thermal break functionality as well as for maximum wall/frame engagement and installation flexibility.
   - FT frames supplied standard with weld-in base anchors (n/a when using EMA)
   - Any jamb anchors needed for FT Series frames must be specified in the order
   - All except wire are weld-in only
   - Anchor options:
     - New masonry (wire anchors)
     - Existing masonry wall (FT EMA anchors)
     - Stud wall (nailing strap jamb anchors)
   - Any additional field anchoring must take care to maintain the thermal break or use non-metallic materials with low thermal conductivity (e.g. wood)

2. To achieve rating provided, use with Zero 525 Rabbetted Aluminum Thermal Break Threshold or similar.

3. For additional thermal benefits, use with Steelcraft Polystyrene or Polyurethane insulated doors, insulate frame, and add Zero products:
   - Zero Thermal break threshold options: 624, 625, 626, 724, 726, or 8726
   - For recessed applications use 722, 723, 729, 8729, or 8730
   - Zero PSA self-adhesive gasketing: 188, 488, or other
     - Apply to separator stop above 50°F (70°-100°F ideal). Allow 72 hrs to set prior to use or conditions (min 24hrs, depending on application temperature).

4. **Installation Caution Notice: Grouted frames**: Grouted frames are not recommended as this increases thermal transmission.

Hardware preparations • General information

General information

All Steelcraft frames, doors and stick systems are routinely prepared for various types and grades of architectural hardware. The preparations for the specified hardware are in accordance with the hardware manufacturer's registered and/or published template information.

This section of the Steelcraft TD Manual is designed to help educate users of how Steelcraft products interface and function with the major architectural hardware products. It is also intended to be a frame and door supplement to the information published by the hardware manufacturer being used and/or specified.

Hardware

Architectural hardware items are any device, sensor or auxiliary item attached to a frame or door, which is either specified and/or required for the operation and functionality of the door assembly. The hardware attached to the frame and/or door can be purely mechanical, electrical (wired into the alarm and monitoring systems of the building) or pneumatic.

The architect, specification writer and/or the purchaser of the door assembly specifies these hardware items.

Hardware preparation types

There are three (3) major types of hardware preparations to be considered.

- **Mortised hardware:** Any hardware device or item (including sensors) attached to the frame or door that requires a cutout and reinforcement be made prior to attaching the hardware item to the door and/or frame.
- **Surface applied and reinforced hardware:** Any hardware device or item (including sensors) attached to the frame or door which do not require a cutout be made prior to attaching the hardware item to the frame and/or door, however, the hardware manufacturer or specifier requires a reinforcement be built into the frame or door to support the attached piece of hardware or its function.
- **Surface applied hardware:** Any hardware device or item (including sensors) attached to the frame or door which does not require either a cutout or reinforcement to be made prior to attaching the hardware item to the frame and/or door.

Hardware categories

The architectural hardware attached to a door assembly, usually falls into one of the following device categories:

- **Hinging:** These devices perform the functions of suspending and swinging the door in the frame. Hinging systems are usually attached to the door edge and hinge jamb. The most commonly used hinging devices are:
  - Butt hinges: mortised to both the door edge and hinge jamb
  - Continuous hinges: surface applied and reinforced to the door edge and hinge jamb
  - Pivots: mortised to both door edge and hinge jamb.

- **Locking:** These devices perform the functions of holding the door in a closed position by the means of a latch or lock bolt projecting from the door into a strike. The strike is located in either the frame or inactive leaf of a pair of doors. All of these devices are mortised into the door edge and the strike jamb. The most commonly used locking devices are:
  - Latches and locks
  - Deadlocks
  - Exit devices (some are surface applied on the door face)
  - Auxiliary locks

- **Closing:** These devices perform the functions of mechanically closing the door once it is opened, and are mainly categorized as:
  - Surface closers: surface applied and reinforced on the door face and head of the frame.
  - Concealed closers: mortised to both door top channel and head of the frame.
  - Floor closers: mortised into the door bottom channel and attached into the floor.

- **Protecting:** These devices are designed to protect the frame and door against foreseen damage from abuse and function. They are mainly surface applied and internally reinforced only when specified. The most commonly used devices in this category are:
  - Kick plates
  - Push pull plates
  - Coordinators
  - Holders: may be concealed and reinforced when specified
  - Stops: may be concealed and reinforced when specified

- **Weather Sealing:** These devices perform the functions of limiting weather, smoke and sound penetration through the operating clearances around the installed and operable door, frame and hardware assembly. These devices are mainly surface applied. The most commonly used devices in this category are:
  - Perimeter weather seals: usually surface attached to the rabbet of the jambs and head
  - Door bottoms: mortised into the bottom of the door, or surface applied to the bottom of the door face.
  - Astragals: used in double door applications and surface attached to the edge of one of the doors.

ANSI compliance

Steelcraft hardware preparations and reinforcements are in accordance with ANSI A250.6. Locations are in accordance with ANSI/DHI A115.
Locations: Hinging, locking, closing

General information
Steelcraft’s hardware locations are the same from product to product.
The ANSI A115.1 or ANSI A115.2 (4 7⁄8” [124 mm] high) strike preparation is normally supplied on all frames prepared for 1 3⁄4” (45 mm) thick doors. The strike is located at 40 5⁄16” centerline (1024 mm) from the bottom of the frame. This strike locations allows the use of either the Mortise (ANSI A115.1) or Cylindrical (ANSI A115.2) locks. The 4 7⁄8” (124 mm) strike also allows the use of mortise exit devices.
The ANSI A115.3 (2 3⁄4” [70 mm] high) strike preparation is normally supplied on frames for 1 3⁄8” (35 mm) thick doors. The strike preparation is also located at 40 5⁄16” centerline (1024 mm) from the bottom of the frame.

Locations
Steelcraft’s hinge locations are listed on the elevations shown on pages 255-257. All openings for 1 3⁄4” (45 mm) doors up to and including 7’6” (2286 mm) in height have 1 1⁄2 pair of hinges. Openings over 7’6” (2286 mm) through 10’0” (3048 mm) in height have 2 pair of hinges. Openings over 10’0” (3048 mm) have 2-1⁄2 pair of hinges.

Other hardware locations are shown on the table below:

<table>

Notes:
1. Standard location for single doors is to match the ANSI A115.1 strike location of 40 7⁄8” (1024 mm) from the bottom of the frame. Pairs of doors are located per template to insure the devices on both leaves align.
2. Rim and vertical rod exit devices are located per template.
3. Locations on frame are from bottom of frame.
4. Locations on door are from bottom of door (with the standard 3⁄4” undercut).
5. Locations are for openings over 5’0”. Consult factory for under 5’0”.

Specification compliance
Steelcraft’s hardware locations follow the standards established by the Steel Door Institute (SDI) and the Door and Hardware Institute (DHI).

Fire ratings
Fire ratings are not affected by hardware locations. The proper hardware must be used. Refer to the Fire Rated Section of the Steelcraft Spec Manual for hardware requirements.
Doors and frames with 1 ½ pair of hinges

Doors and frames with 2 pairs of hinges

Notes:
1. Steelcraft standard hinge spacing for doors up to and including 7'6" (2286 mm) high is 1 ½ pairs (3 hinges) as shown in Table 1. Information shown in Table 2 is for reference when 4 hinges are specified for those door heights.
2. Steelcraft standard for doors over 10'0" (3048 mm) is 2 ½ pairs (5 hinges). See Table 3.
3. For special door heights, dimensions "A" and "B" will vary accordingly unless specified differently.

Note: For Fire Rated Hardware requirements, refer to the Fire Rated Section. An additional listed latch is required in the top leaf.
Hardware preparations: Nomenclature

Doors

Door hardware prep nomenclature options

Steelcraft ordering nomenclature is described in the General Section of this manual on page 12-13. The following information deals only with the nomenclature for ordering hardware preparations in Steelcraft doors. In addition to the guide shown on page 12-13, the following is a detailed list of hardware ordering codes which will be additional suffixes to the top line Steelcraft ordering nomenclature.

<table>
<thead>
<tr>

- Frame closer prep in single door frame head: PA/RA
- **Frame coordinator prep in head:** FACE MOUNTED (see below for other hardware code options)
- Complete ordering nomenclature: F16 UL 4 5 ¾ 60 HD PA/RA FACE MOUNTED

**Note:** Refer to Steelcraft ordering nomenclature description on pp 12-13.
Door preps: Locks

161 Lock prep
- For Bored/Cylindrical locksets conforming to ANSI A115.2
- KNOB trim or deadlock applications

161 for full lock prep
- Prep options:
  - 161-48 = 48” above bottom of frame
  - 161-60 = 60” above bottom of frame
  - 161-SPL = special location
  - 161R = with RPD reinforcements
  - 161V = with VRPD reinforcement

161ED for edge prep only
- Prep options:
  - 161ED-48 = 48” above bottom of frame
  - 161ED-60 = 60” above bottom of frame
  - 161ED-SPL = special location
  - 161EDR = with RPD reinforcements
  - 161EDV = with VRPD reinforcement

Lock reinforcement detail
- 16 gauge
- Projection welded Format Textor edge
- Extruded and tapped holes for lock front attachment
Hardware preparations • Door preps: Locks

160 & 160-4 Lock prep
• For Bored/Cylindrical locksets conforming to ANSI A115.2
• KNOB trim or deadlock applications

160 for 2 3/8" backset
Prep options:
• 160-48 = 48" above bottom of frame
• 160-60 = 60" above bottom of frame
• 160-SPL = special location

160-4 for 2 3/4" backset
Prep options:
• 160-4-48 = 48" above bottom of frame
• 160-4-60 = 60" above bottom of frame
• 160-SPL = special location

160ED for edge prep only
Prep options:
• 160ED-48 = 48" above bottom of frame
• 160ED-60 = 60" above bottom of frame
• 160ED-SPL = special location

Lock reinforcement detail
• 16 gauge
• Projection welded Format Text or edge
• Extruded and tapped holes for lock front attachment
61L Lock prep
- For Bored/Cylindrical locksets conforming to ANSI A115.18
- LEVER trim or deadlock applications

61L for full lock prep
 Prep options:
- 61L-48 = 48" above bottom of frame
- 61L-60 = 60" above bottom of frame
- 61L-SPL = special location
- 61LR = with RPD reinforcements
- 61LV = with VRPD reinforcement

Note: for locks installed in this prep must include Rose (trim with minimum 3 7/16" diameters.

Lock reinforcement detail
- 16 gauge
- Projection welded Format Textor edge
- Extruded and tapped holes for lock front attachment
Hardware preparations • Door preps: Locks

86 Lock prep
- For Mortise locksets conforming to ANSI A115.1
- Preparation for full escutcheon trim

86 for full lock prep options:
- 86-48 = 48” above bottom of frame
- 86-60 = 60” above bottom of frame
- 86-SPL = special location
- 86R = with RPD reinforcements
- 86RV = with VRPD reinforcement

86ED for edge prep only options:
- 86ED-48 = 48” above bottom of frame
- 86ED-60 = 60” above bottom of frame
- 86ED-SPL = special location
- 86DR = with RPD reinforcements
- 86EDV = with VRPD reinforcement

Lock reinforcement detail
- 14 gauge
- Projection welded Format Textor edge
- Extruded and tapped holes for lock front attachment
86 Lock prep for commercial and institutional applications

7C6 Lock prep
- For Mortise locksets conforming to ANSI A115.1
- Preparation for sectional trim per Steelcraft hardware catalogs
- Nomenclature varies with lock catalogue requirements

Special lock prep
- Nomenclature "SPECIAL" designates templated hardware prep is required. Lock number and template number must be specified

7C6 for Schlage L9050, L9453, L9456, L9473, L9485 (RH/LH)
- 7C6 = Refer to Steelcraft Hardware Catalogs for all prep designations

Special
- Designation for sectional trim when ordered by manufacturers template numbers

Lock reinforcement detail
- 14 gauge
- Projection welded Format Textor edge
- Extruded and tapped holes for lock front attachment
Door preps: Exit devices

**Push/Pull Prep**
- For Push/Pull plate trim

Notes:
1. Push Pull reinforcements are 14 gauge steel.
2. Both faces are reinforced as shown.
Rim panic prep
• For surface Rim Panic Devices

Rim Panic reinforcements on hinge side with Standard lock prep and reinforcement

Full lock prep options:
• 86R = 86 lock prep for full escutcheon trim
• 61LR = 61L lock prep for lever trim
• 160R = 160 lock prep for knob trim
• 161R = 161 lock prep for knob trim

Edge only lock prep options:
• 86EDR = 86 lock prep with edge prep only
• 161EDR = 161 lock prep with edge prep only
• 160EDR = 160 lock prep with edge prep only

Notes:
1. RPD variation preps include the primary (standard) lock prep as specified
2. Primary lock ordering codes suffixed with the letter "R" (i.e. 86R, 86EDR) include additional exit reinforcements above and below the primary reinforcements
3. Reinforcement is made of 14 gauge material
Hardware preparations • Door preps: Exit devices

Vertical rod prep
- For surface Vertical Rod Panic Devices

VRPD
For Vertical Rod Panic Reinforcements only.
Prep options are not available.

VRPD variations
Vertical Rod Panic reinforcements on hinge side with standard lock prep and reinforcement

Full lock prep options:
- 86V = 86 lock prep for full escutcheon trim
- 61LV = 61L lock prep for lever trim
- 160V = 160 lock prep for knob trim
- 161V = 161 lock prep for knob trim
- Edge only lock prep options:
  - 86EDV = 86 lock prep with edge prep only
  - 161EDV = 161 lock prep with edge prep only
  - 160EDV = 160 lock prep with edge prep only

Notes:
1. VRPD variation preps include the primary (standard) lock prep as specified.
2. Primary lock ordering codes suffixed with the letter "V" (i.e. 86V, 86EDV) include additional exit reinforcements above and below the primary reinforcements.
3. Prep is located to accommodate Steelcraft’s standard ¾” undercut. If special undercuts are required, it must be specified and prep location will be adjusted accordingly.
4. Reinforcement is made of 14 gauge material.
Special: Concealed vertical rod exit device prep
• Preparation concealed vertical rod devices

Notes:
1. Concealed vertical rod preps are always ordered as "SPECIAL", per manufacturer's templates.
2. Illustrated above are the typical internal reinforcing channels for L, B, CE, and T Series doors.
3. Top and bottom channel preparations vary per manufacturer’s templates.
4. Prep is located to accommodate Steelcraft’s standard \( \frac{3}{4} \)" undercut. If special undercuts are required, it must be specified and prep location will be adjusted accordingly.
Hardware preparations • Door preps: Exit devices

Special: Von Duprin inpaN™ (94/9547) concealed vertical rod integral exit device

Notes:
1. Minimum nominal door width is 2'6"
2. Cross bar (prep) width:
   - 24 1/16" for doors under 2'10" in nominal door width.
   - 30 1/16" for doors 2'10" and over in nominal door width
3. Illustrated above are the typical internal reinforcing channels for L and T Series doors.
4. Prep is located to accommodate Steelcraft’s standard 3/8" undercut. If special undercuts are required, it must be specified and prep location will be adjusted accordingly.
Special: Von Duprin impact™ (94/9575) mortise lock device

Notes:
1. Minimum nominal door width is 2'6"
2. Cross bar (prep) width:
   - 24 7/16" for doors under 2'10" in nominal door width.
   - 30 7/16" for door 2'10" and over in nominal door width.
3. Illustrated above are the typical internal reinforcing channels for L and T Series doors.
4. Prep is located to accommodate Steelcraft's standard 3/4" undercut. If special undercuts are required, it must be specified and prep location will be adjusted accordingly.
5. Prep requires special strike location in frames.
Door preps: Inactive leaves

**ASA Prep without astragal**
- For 4 7/8" lip strike
- Preparation for full inactive leaf with astragal

**Elevation Detail with ASA Strike**

**Notes:**
1. Prep is for fully mortised 4 7/8" ASA strike, commonly used on a wide inactive leaf.
2. Prep is located to accommodate Steelcraft’s standard ¾" undercut. If special undercuts are required, it must be specified and prep location will be adjusted accordingly.
ASA Prep with astragal
- For 4 7/8” lip strike
- Preparation for full inactive leaf with astragal

Notes:
1. "Z" Astragal is required. Prep is for fully mortised 4 7/8" ASA strike.
   - Cut outs on the edge of the door are for clearance only.
   - Astragals are shipped loose for field attachment.
   - Attaching tabs for strike attachment are included on the astragal.
2. Center line of bottom prep is located 39 9/16” above the bottom edge of the door, unless otherwise specified
3. Prep is located to accommodate Steelcraft’s standard ¾” undercut. If special undercuts are required, it must be specified and prep location will be adjusted accordingly.
Hardware preparations • Door preps: Inactive leaves

Flush bolts with astragal
- Door leaf ordered as a separate inactive leaf not as a pair
- Cutouts for Flush bolts in inactive leaves
- For Flush Bolts (Manual or Automatic) conforming to ANSI A115.4

Notes:
1. Astragals are shipped loose for field attachment.
2. Attaching tabs for flush bolts and strikes are included on the astragal. Cut outs on the edge of the door are for clearance only.
3. Details above, address inactive leafs when ordered as individual leafs.
4. When ordering double doors as pairs specify the primary lock and auxiliary locks on the active leaf. Primary Strike designations for the inactive leaf are not required, however strikes for auxiliary locks must be specified.

Inactive leaf with astragal
Note: option does not have a strike preparation on the edge

Inactive leaf with astragal ASA
Prep options:
Strike for primary lock:
- ASA = 4 7/8" strike @ 40 5/16 above bottom of frame
- CYL = 2 3/4" strike @ 40 5/16 above bottom of frame
- BLANK = no prep but deadlock above
- SPECIAL = Special strike per manufacturer’s template

Strike for deadlock lock:
- ASA-48 = 4 7/8" strike @ 48" above bottom of frame
- ASA-60 = 4 7/8" strike 60" above bottom of frame
- CYL-48 = 2 3/4" strike @ 48" above bottom of frame
- CYL-60 = 2 3/4" strike 60" above bottom of frame
- SPECIAL-48 = 48" above bottom of frame
- SPECIAL-60 = 60" above bottom of frame

Strike for both primary lock and deadlock lock:
Specify nomenclature coded for both locks
Example: ASA x ASA-60 = primary strike @ 40 5/16 and deadlock strike @ 60" above bottom of the frame
Flush bolts with astragal (astragal attachment detail)
- Door leaf ordered as a separate inactive leaf not as a pair
- Preparation for Flush bolts and strikes in the inactive leaf and Astragal
- For Flush Bolts (Manual or Automatic) conforming to ANSI A115.4

Flush bolt Elevation Detail

Notes:
1. "Z" Astragal is required. Prep is for fully mortised Flush Bolts (manual or auto).
   - Cut outs on the edge of the door are for clearance only.
   - Astragals are shipped loose for field attachment
   - Attaching tabs for Flush bolts attachment are included on the astragal.
2. Center line of bottom prep is located 12" above the bottom edge of the door, unless otherwise specified
3. Top prep location varies as specified. Standard location options are 12", 18", 24", 30" or 36" from the top edge of the door.

Details are subject to change without prior notice.
Hardware preparations • Door preps: Inactive leaves

Flush bolts without astragal
- Door leaf ordered as a separate inactive leaf not as a pair
- Cutouts for Flush bolts in inactive leafs
- For Flush Bolts (Manual or Automatic) conforming to ANSI A115.4

Inactive leaf without astragal
Note: option does not have a strike preparation on the edge

Notes:
1. Flush bolt and strike preparations are fully mortised into the active leaf door edge.
2. Details above, address inactive leafs when ordered as individual leafs.
3. When ordering double doors as pairs specify the primary lock and auxiliary locks on the active leaf. Primary Strike designations for the inactive leaf are not required, however strikes for auxiliary locks must be specified.

Inactive leaf without astragal ASA
Prep options:
Strike for primary lock:
- ASA = 4 7/8" strike @ 40 \( \frac{5}{16} \) above bottom of frame
- CYL = 2 3/4" strike @ 40 \( \frac{5}{16} \) above bottom of frame
- BLANK = no prep but deadlock above
- SPECIAL = Special strike per manufacturer’s template

Strike for deadlock lock:
- ASA-48 = 4 7/8" strike @ 48" above bottom of frame
- ASA-60 = 4 7/8" strike 60" above bottom of frame
- CYL-48 = 2 3/4" strike @ 48" above bottom of frame
- CYL-60 = 2 3/4" strike 60" above bottom of frame
- SPECIAL-48 = 48" above bottom of frame
- SPECIAL-60 = 60" above bottom of frame

Strike for both primary lock and deadlock lock:
Specify nomenclature coded for both locks
Example: ASA x ASA-60 = primary strike @ 40 \( \frac{5}{16} \)" and deadlock strike @ 60" above bottom of the frame
Flush bolts without astragal (flush bolt prep detail)
- Used in a wide inactive leaf
- Door leaf ordered as a separate inactive leaf not as a pair
- Preparation for Flush bolts and strikes in inactive leaves
- For Flush Bolts (Manual or Automatic) conforming to ANSI A115.4

Flush bolt Elevation Detail

Flush bolt Prep Detail
- 16 gauge reinforcement

Notes:
1. Prep is for fully mortised Flush Bolts (manual or auto)
2. Center line of bottom prep is located 12" above the bottom edge of the door, unless otherwise specified.
3. Top prep location varies as specified. Standard location options are 12", 18", 24", 30" or 36" from the top edge of the door.
Hardware preparations • Door preps: Inactive leaves

Surface bolts without astragal
- Door leaf ordered as a separate inactive leaf not as a pair
- Surface Bolt reinforcements in inactive leafs

Inactive leaf without astragal

Note: option does not have a strike preparation on the edge

Notes:
1. Details above, address inactive leafs when ordered as individual leafs.
2. When ordering double doors as pairs specify the primary lock and auxiliary locks on the active leaf. Primary Strike designations for the inactive leaf are not required, however strikes for auxiliary locks must be specified.
3. Surface bolt reinforcement data:
   - Reinforcements are 14 gauge steel
   - Both faces are reinforced at the top and bottom on the lock edge

Inactive leaf without astragal ASA

Prep options:

Strike for primary lock:
- ASA = 4 7/8" strike @ 40 5/16" above bottom of frame
- CYL = 2 3/4" strike @ 40 5/16" above bottom of frame
- BLANK = no prep but deadlock above
- SPECIAL = Special strike per manufacturer's template

Strike for deadlock lock:
- ASA-48 = 4 7/8" strike @ 48" above bottom of frame
- ASA-60 = 4 7/8" strike 60" above bottom of frame
- CYL-48 = 2 3/4" strike @ 48" above bottom of frame
- CYL-60 = 2 3/4" strike 60" above bottom of frame
- SPECIAL-48 = 48" above bottom of frame
- SPECIAL-60 = 60" above bottom of frame

Strike for both primary lock and deadlock lock:
Specify nomenclature coded for both locks

Example: ASA x ASA-60 = primary strike @ 40 5/16" and deadlock strike @ 60" above bottom of the frame
Closer prep

- For Surface Closers
- Internally reinforced on both faces

Closer for surface closers

Prep options:
- **SPECIAL** = special size reinforcement

Notes:
1. All surface closer reinforcements are 14 gauge unless otherwise specified.
2. Reinforcement heights are as follows:
   - 6" = all door designs except doors with G, LG or FG glass lights
   - 4 3/8" = doors with G, LG or FG glass lights

Closer Reinforcement Detail
- 14 gauge steel
Frame preps: Hinges

**Hinge prep**
- For templated mortise hinges
- Internally reinforced with 7 gauge (.187")

**Standard hinge prep elevation detail**

**Hinge options:**
- When no hinge prep is specified door is prepped for 4 1/2" universal hinges:
  - **5" HINGE** = 5" Universal hinge: see below
  - **4" HINGE** = 4" standard duty template hinge

  **Note:** L20 & CE 20 Series only
- **SPECIAL** = Special hinge prep per template
- **BLANK HINGE** = No hinge preps, standard door width
Frame preps: Strikes

ASA Strike prep

Typical Preparation

Reinforcement

General information
The ANSI A115.1 and ANSI A115.2 strikes are designed to function with the ANSI A115.1 and 115.2 locks and mortise exit devices. Some mortise and bored-in deadlocks will function with these strikes.

Description
ANSI A115.1 and ANSI A115.2 strikes are 4 7/8” (124 mm) high and 11/4” (32 mm) wide. The centerline of the strike is located 40 5/16” (1024 mm) from the bottom of the frame. This location will function with the ANSI A115.1 and A115.2 locks and the mortise exit devices. The location for deadbolts must be adjusted (normally 48” [1219 mm] from the bottom of the frame) to match the deadlock being used. The centerline of the strike is located 15/16” (24 mm) from the stop of the strike jamb.

The normal lip on the strike is 1 1/4” (32 mm). This allows the strike lip to extend beyond the frame face providing a guide for the latch bolt. The lip is omitted on deadlock strikes.

Reinforcement
The reinforcement used is a specially formed 16 gauge steel part and is projection welded to the door rabbet of the strike jamb. The reinforcement includes extruded attaching holes to provide adequate threads for the strike plate screws. The reinforcement includes a dust (mortar) box that is deep enough to receive the 1” (25 mm) throw latch bolt or deadbolt.

Template
Lock manufacturers template should be reviewed carefully to insure the strike being used will function in the preparation. Although Steelcraft’s preparation meets or exceeds the ANSI standard, some manufacturer’s strikes may not fit properly in the cutout or provide enough lip extension.

Specification compliance
The ANSI A115.1 and ANSI A115.2 strike preparation meets or exceeds the requirements of the Steel Door Institute (SDI) and the Door and Hardware Institute (DHI).

Fire ratings
The ANSI A115.1 and ANSI A115.2 strikes can be used in fire rated frames with ratings from 20 minute to 3 hours.
General information
The ANSI A115.3 strike is designed to function with the ANSI A115.2 and 115.3 locks and bored-in deadlocks.

Description
ANSI A115.3 strike is 2 3/4˝ (70 mm) high and 1 1/8˝ (28 mm) wide. The centerline of the strike is located 40 5/16˝ (1024 mm) from the bottom of the frame. This location will function with the ANSI A115.2 and A115.3 locks. The location must be adjusted (normally 48˝ [1219 mm]) from the bottom of the frame to match the deadlock being used. The centerline of the strike is located 15/16˝ (24 mm) from the stop of the strike jamb.

The normal lip on the strike is 1 1/4˝ (32 mm). This allows the strike lip to extend beyond the frame face providing a guide for the latch bolt. The lip is omitted on deadlock strikes.

Reinforcement
The reinforcement used is a 14 gauge steel part and is projection welded to the frame rabbet. The reinforcement includes extruded attaching holes to provide adequate threads for the strike plate screws.

The reinforcement includes a dust (mortar) box welded to the reinforcement that is deep enough to receive the 1" (25 mm) throw latch bolt or deadbolt.

Template
Lock manufacturers template should be reviewed carefully to insure the strike being used will function in the preparation. Although Steelcraft’s preparation meets or exceeds the ANSI standard, some manufacturer’s strikes may not fit properly in the cutout or provide enough lip extension.

Specification compliance
The ANSI A115.3 strike preparation meets or exceeds the requirements of the Steel Door Institute (SDI) and the Door and Hardware Institute (DHI).

Fire ratings
The ANSI A115.1 and ANSI A115.2 strikes can be used in fire rated frames with ratings from 20 minute to 3 hours.
Deadlock strike prep

**General information**
Deadlock strikes are normally rectangular shaped non-lip type strikes that are designed to work with bored-in or mortise deadlocks. A lip strike can be used if the cutout for the deadbolt is located properly and is the correct size.

**Description**
The deadlock strike preparation is a rectangular shaped cutout in the door rabbet of the strike jamb. The centerline of the deadlock strike is located 48" (1219 mm) from the bottom of the frame and the door preparation adjusted to match the strike.

**Reinforcement**
The reinforcement used is a formed 14 gauge steel plate that is welded to the door rabbet of the strike jamb. The reinforcement provides adequate threads for the strike plate screws. In addition the reinforcement includes a dust (mortar) box that is deep enough to receive the 1" (25 mm) throw deadbolt.

**Template**
Deadlock strike manufacturer's template should be reviewed carefully for the preparation required in the frame.

**Specification compliance**
The deadlock strike preparation meets or exceeds the requirements of the Steel Door Institute (SDI) and the Door and Hardware Institute (DHI).
General information
Steelcraft’s rim exit device strike preparation is designed to function with all rim exit devices.

Description
The preparation is designed to accept the surface mounted strike supplied by the exit device manufacturer. The strike jamb is reinforced only and all drilling and tapping is done in the field by others. The centerline of the preparation is located per the exit device manufacturer’s template.

Reinforcement
The preparation consists of a 14 gauge steel plate 8 1/2" (216 mm) long by minimum 2" (950 mm) wide, welded to the soffit of the strike jamb. A dust (mortar) guard is not provided.

Template
Exit device manufacturer’s template should be reviewed.

Specification compliance
The rim exit device strike preparation meets or exceeds the requirements of the Steel Door Institute (SDI) and the Door and Hardware Institute (DHI).

Fire ratings
RPD strikes are used in fire rated frames in conjunction with doors equipped with Rim Fire Exit Hardware, in ratings from 20 minute to 3 hours.
Surface vertical rod strike prep

General information
Steelcraft’s vertical rod exit device strike preparation is designed to function with all vertical rod exit devices.

Description
The preparation is designed to accept the surface mounted strike supplied by the exit device manufacturer. The head of the frame is reinforced only and all drilling and tapping is done in the field by others. The preparation is located in the soffit area and in the center of the frame head.

Reinforcement
The preparation consists of a 14 gauge steel plate 14" (356 mm) long by 2" (50 mm) wide, welded to the soffit of the frame header. The plate is held to the door side of the jamb. A dust (mortar) box is not provided.

Template
Exit device manufacturers template should be reviewed carefully to insure the strike being used will function in the preparation.

Specification compliance
The vertical rod exit device strike preparation meets or exceeds the requirements of the Steel Door Institute (SDI) and the Door and Hardware Institute (DHI).

Fire ratings
Vertical Rod strikes are used in fire rated frames in conjunction with pairs of doors equipped with Surface Vertical Rod Fire Exit Hardware, in ratings from 20 minute to 3 hours.
Universal flush bolt strike prep

**General information**
Steelcraft’s Universal flush bolt strike preparation is designed to be non-handed. The preparation includes a cutout, reinforcement and strike plate that will function with all ANSI flush bolts.

**Description**
The preparation includes a cutout located in the door rabbot of the frame header that is large enough to cover both right hand and left hand active openings. A reinforcing plate that is offset to accept a reversible strike/filler is welded into the door rabbot of the frame header. A prime painted strike/filler plate is supplied installed. To change hands it is necessary to remove the strike/filler plate and reinstall for the other hand using the same strike/filler plate and screws.

**Reinforcement**
- **Reinforcement**: The preparation consists of a 14 gauge steel plate of such design to function properly with the flush bolt. The reinforcement is drilled and tapped at the factory. The reinforcements are welded to the door rabbot of the frame header.
- **Strike Plate**: Preparation includes a universal prime painted strike plate with attaching screws. A dust (mortar) box is provided.

**Template**
Flush bolt manufacturer’s template should be reviewed carefully to insure the bolt being used will function in the preparation.

**Specification compliance**
The flush bolt strike preparation meets or exceeds the requirements of the Steel Door Institute (SDI) and the Door and Hardware Institute (DHI).

**Fire ratings**
Universal Flush Bolt strikes are used in fire rated frames in conjunction with pairs of doors equipped with inactive leaf flush bolts, in ratings from 20 minute to 3 hours.

**Notes:**
1. The flush bolt strike/filler plate is prime painted and installed at the factory for right hand openings.
2. For left hand openings, remove the plate and reinstall as required.
Frame preps: Closers

**Surface closer prep**

**Regular Arm (RA) Closer Reinforcement**

- 14 Gauge
- 1-1/2'' x 14''
- (38mm x 356mm)

**Parallel Arm (PA) Closer Reinforcement**

- 14 Gauge
- 2'' x 14''
- (50mm x 356mm)

**Top Jamb (TJ) Closer Reinforcement**

- 14 Gauge
- 1-1/2'' x 14''
- (38mm x 356mm)

**General information**

The use of closer reinforcements allows for the surface mounting of a closer or holder on a frame. The extra material that is added to the inside of the frame head provides sufficient material for drilling and taping for the closer or holder mounting screws.

**Description**

The reinforcement is welded to the inside face or rabbet of the frame (depends on the closer or holder mounting method). The locations of the reinforcement for each mounting type are as follows:

- **Regular arm closers** are used on interior doors. The closer is mounted on the face of the door on the pull side of the opening. The closer arm is mounted to the face of the head member. Steelcraft identification: RA.

- **Parallel arm closers** are used on exterior and interior openings. The closer is mounted on the door face on the push side of the opening. The closer arm is mounted to the 1 ⅞'' rabbet or the soffit of the head member. Steelcraft identification: PA.

- **Top jamb mounted closers** are used on interior and exterior openings. The closer is mounted on the head of the frame on the non-door head face on the push side of the opening. The closer arm is mounted to the door face. Steelcraft identification: TJ.

The location of the individual reinforcement is such that the degree of opening or the size of the closer or holder does not affect the preparation. Reinforcements for surface mounted holders are similar to the PA mounting for a closer. The holder feet are attached to the soffit of the frame head.

**Reinforcement**

The reinforcement used in the frame is a 14 gauge (1.7 mm) steel plate 1 ⅞'' x 14'' (48 mm x 356 mm) long.

**Specification compliance**

The closer preparation in both frames and doors meets or exceed the requirements of the Steel Door Institute (SDI) and the Door and Hardware Institute (DHI).

**Fire ratings**

Closer reinforcements are required in all fire rated products. If the reinforcement is omitted, a special marking is required (see Fire Rated Section for information).

**Note:** Frames are not supplied with the closer or holder.
Frame preps: Hinges

Hinge prep

**General information**

Standard 4 1/2" (114 mm) and optional 5" (127 mm) butt hinges are normally used in 1 3/4" (45 mm) doors. Either hinge will support doors up to 4'0" (1219 mm) wide and 10'0" (3048 mm) high (quantity will vary, refer to pages 249-250).

The preparation in the door and frame are described as the "Universal" preparation. This means the preparation will convert from a standard to a heavy weight hinge prep by removing the break-off spacer in the field.

**Description**

Both the standard 4 1/2" (114 mm) and the optional 5" (127 mm) hinges come in standard and heavy weight.

- 4 1/2" (114 mm) = Standard .134" (3 mm)  
  Heavy .180" (5 mm)
- 5" (127 mm) = Standard .140" (4 mm)  Heavy .190" (5 mm)

Hinges used must be the "TEMPLATED"

**Reinforcement**

The reinforcement used in the door and frame are 7 gauge (4.7 mm) steel and are projection welded to the rabbet of the hinge jamb. The reinforcements include an auxiliary steel spacer. Leave the spacer in place and the standard weight hinge can be used. Remove the spacer and the heavy weight hinge can be used. Refer to the appropriate frame series to insure the patented universal hinge is available.

**Specification compliance**

Both the 4 1/2" (114 mm) and 5" (127 mm) hinge preparations meet or exceed the requirements of the Steel Door Institute (SDI).

**Fire ratings**

The 4 1/2" (114 mm) or 5" (127 mm) hinge can be used in fire rated products with ratings from 20 minute to 3 hours.
Continuous hinge prep

General information
Continuous hinges are generally used on large heavy doors. They are also used when an opening is subjected to high frequency usage.

Description
The type of attachment to the door identifies continuous hinges. The attachment can be
- Full mortise (attached to the door edge and frame rabbet)
- Half surface (attached to the door face and frame rabbet)
- Half mortise (attached to the door edge and frame face)
- Full surface (attached to the door and frame faces)
Attachment to the door and frame can be by sheet metal screws or machine screws. All holes are field drilled or field drilled and tapped. The clearance on the hinge side of the door is adjusted depending on the hinge template.

Reinforcement
When sheet metal screws are used, a reinforcement in both door and frame is not required. Using the hinge as a template or the template supplied, field drill the proper place on the door and frame for the screws and attach the hinge.

When machine screws are used or when specified additional reinforcement for both the door and frame may be required. The reinforcement is 14 gauge steel, welded to the inside of the door or frame as required by the attachment. Using the hinge as a template, or the template supplied, field drill and tap the proper place on the door and frame for the machine screws and attach the hinge.

Reinforcements include a full length mortar guard (dust box) that can be ordered with or without reinforcing. Mortar Guards are available for full or half mortise continuous hinges (not surface) and are installed as illustrated.

Template
Hinge manufacturer’s information should be reviewed carefully to insure the correct attachment and that the hinge is capable of meeting the requirements of your opening.

Fire ratings
Fire rated continuous hinges are available for openings with ratings from 20 minutes to 3 hours. Check the hinge manufacturer’s information on this requirement.
Frame preps: Miscellaneous

EPT Power transfer prep

Typical Frame Preparation

**General information**
Power transfers are used to provide wiring to a swinging door for electric locks, exit devices etc.

**Description**
Power Transfers are mortised into the door rabbet of the hinge jamb and into the hinge edges of the door.

**Reinforcement**
The reinforcements are 16 gauge steel plates welded to the jamb. The plate is drilled and tapped for the necessary mounting screws. A dust (mortar) box or junction box is included with this preparation.

Junction boxes are provided for EPT's and most electrical hardware reinforcements. Knockouts are designed to support both 1/2" or 3/4" conduit.

**Fire ratings**
EPT Power Transfers are considered auxiliary hardware items and can be used on in ratings from 20 minute to 3 hours.

Hourly ratings

Steel fire doors are rated by time (hours or minutes) that a door assembly can withstand exposure to fire test conditions. Hourly (minute) ratings are shown below:

<table>
<thead>
<tr>
<th>Hourly Ratings</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>3 hour (180 minutes)</td>
<td>Opening in walls separating buildings or dividing a building into fire areas.</td>
</tr>
<tr>
<td>1 1/2 hour (90 minute)</td>
<td>Openings in enclosed or vertical communications through buildings. These could be stairwells or elevator shafts.</td>
</tr>
<tr>
<td>1 hour (60 minute)</td>
<td>Openings in corridors and room partitions dividing buildings into areas of occupancy. Historically, the 1 hour ratings have been wood door ratings. Steel doors are starting to be used in these openings depending on the AHJ.</td>

Fire door assemblies:

Steelcraft fire rated doors, three sided frames, transom and/or sidelight frames and fire window frames are required to comply with building codes and the local AHJ. This section of the manual has been compiled as an aid to help understand the ratings of the door and frame products, and to provide a broad overview of the products Steelcraft offers to meet the increasingly stringent needs of the fire protection community.
Fire rated products • General information

Fire door assembly components
Care should be taken in the selection of the components used in a fire door assembly. If any of the listed components are omitted, or if a non-rated component is substituted, the door assembly rating will be violated. Fire rated components (with the exception of the wall) are listed in the UL Certifications Directory or the IT/WHI Directory of Listed Products.

Required Fire Door Assembly components are as follows:

- **Listed frames**: Frames are required to be labeled with the appropriate fire door frame label. The frame label carries an hourly rating, which is generally valid for any rating up to and including the rating on the label.

- **Listed doors**: Doors are required to be labeled with the appropriate fire door label. The fire door label carries an hourly rating. Doors can be labeled with a higher hourly rating than required, but, it is not acceptable to substitute a door with a lower hourly rating than required.

- **Listed hardware**: Most hardware components are also required to be labeled with the appropriate fire label. The location and type of label will vary with the device being used. The required minimum hardware components for a fire door assembly are as follows:
  - **Listed latch or locking device**: may be single point locks, latches, fire exit devices or other listed devices.
  - **Approved hinge(s)**: may be butt hinges, pivots, continuous hinges or other approved hinge constructions. Hinges generally are not labeled.
  - **Listed closing device**: may be surface mounted or concealed attachment to the door and frame.
  - **Fire rated wall**: Wall construction must be fire rated as dictated by the building code and the AHJ.

The AHJ (Authority Having Jurisdiction)
The local AHJ must be the final authority in fire door assembly issues. Steelcraft Fire Doors and Fire Door Frames are produced under the listing programs of Underwriters’ Laboratories Incorporated (UL) Warnock Hersey (IT/WHI) and FM Global (FM).

Installation
Installation of all Steelcraft doors and frames shall conform to the published Steelcraft installation instructions, and ANSI/SDI A250.11 Recommended Installation Instructions for Steel Frames, ANSI/A250.11 and HMMA 840. All fire rated frames must be installed in accordance with NFPA 80, and/or the local AHJ.

Functions of fire door assemblies
Fire Doors must serve four main functions:
1. Serve as a regular door at all times.
2. Provide ready egress from a fire area during a fire.
3. Inhibit the spread of fire and smoke throughout the building or to an adjacent building.
4. Protect life and property by reducing smoke hazards.

When a fire starts, it is most important to evacuate the people safely from the building. After evacuation, the doors must serve as a fire and smoke barrier. It is a well known fact, that in a fire more people are killed by either smoke asphyxiation or by panic, than by the fire.

The same length of protection from the fire is not required of all openings in buildings. The location in the building determines the length of time that the door must withstand a fire. It is the responsibility of the building code and the AHJ to indicate the type of Fire Doors Assemblies that are to be used at the required locations in a building.

Fire rated steel frames and doors
Manufacturers of steel frames and doors choose from several methods of classifying their product as Fire Doors. Municipalities, state governments, insurance regulations and building codes vary in the requirements for Fire Doors.

Users of fire doors can specify the type of label that offers the desired fire protection. Regardless of the label chosen, serious consideration should be given to the company manufacturing the product and the performance expected.

The National Fire Protection Association publishes NFPA Pamphlet 80, which is the generally accepted standard throughout the United States for the installation of fire doors and windows. This standard is generally accepted by state fire code officials and municipal building officials.

Some of the topics covered in NFPA Pamphlet 80 are:
- allowable glass area in doors for different locations and ratings
- maximum sizes for various kinds of fire doors
- latching device and hinge quantity
- dimensional requirements, as they relate to different ratings, sizes and types of fire door classified a door or a frame only if it meets the following conditions

It is the responsibility of the architect and/or specification writer to specify the proper materials for complete safety. They should be aware of the issues that constitute maximum safety in Fire Frames and Doors. All persons responsible for the design, installation and operation of any building involving people or valued property should insist upon the type of labeled door and frame that will afford the maximum fire protection.
Fire rated products • General information

Listing agencies
There are currently three (3) listing systems available from Steelcraft.

1. Underwriters Laboratories (UL) Fire Testing and Certification Program. UL is an independent agency with testing, listing, in-plant inspection, and labeling capabilities.
   - The manufacturer’s design has been accepted by UL (under their performance standard UL10C or UL9) which uses NFPA Pamphlet 80 as the basis for their decision.
   - The door or frame is manufactured in accordance with the accepted design in the presence of a UL inspector.
   - The product passes the UL10C or UL9 fire test conducted by UL.
   - UL finds that the product meets the additional criteria (such as durability, stability, etc.) in addition to passing the fire test.
   - It is subject to a continual follow-up service, including unannounced, in-plant inspections during the manufacturing process to be sure that the frames and doors continue to be made exactly the same as tested.

2. Intertek Testing Services / Warnock Hersey (ITS/WHI) Fire Testing and Certification Programs. ITS/WHI is an independent agency with testing, listing, in-plant inspection, and labeling capabilities.
   - The manufacturer may, at their option, submit drawings of the product to be tested to ITS/WHI for review. If potential problem areas are noted ITS/WHI will notify the manufacturer of these so that he may consider design changes.
   - IT/WHI personnel witness manufacturing of the product to be tested and verify components and assembly methods.
   - The product is then tested by ITS/WHI to determine if it meets the stringent requirements of the fire door test standards.
   - A factory follow-up inspection, listing and labeling agreement is issued. This agreement allows ITS/WHI to make unannounced in-plant inspections.

3. FM Global/Approvals follow-up certification programs. FM Global is an independent underwriting agency with listing, in-plant inspection, and labeling capabilities.
   - Examine and test production samples
   - Examine manufacturing facilities and audit quality control procedures.
   - A factory follow-up inspection, listing and labeling agreement is issued. This agreement allows FM to make unannounced in-plant inspections.

Doors, frames, and walls
Frames and doors are normally rated at three-quarters of the rating of the walls. If the rating for the wall is 4 hours, the rating for the door and frame is generally 3 hours. If the rating for the wall is 2 hours, the rating for the door and frame would be 1½ hours, etc. There are two current exceptions to this practice: 20 min. openings used for smoke control applications and 1-hour openings. Both used in 1-hour walls.

The reason that door and frame assemblies are normally rated at 75% of the total ratings of the wall is that the actual fire testing program for walls is completely different than that of frames and doors and the requirements and acceptance criteria vary. It should also be noted that the severity of fire is generally considered to be less at a door opening than at a wall. Normally doorways are open for passage of pedestrians and walls have a tendency to have furniture and other items stored against them.

Steps to follow
The following steps should be followed in specifying fire door requirements:

1. Investigate the appropriate building code(s).
2. Determine the fire resistance of the wall or partition in which the opening is to be located and select a door assembly (frame, door and hardware) having a proper fire-protection rating. The effectiveness of the entire assembly as a fire barrier may be destroyed if any component is omitted or one of substandard quality is used.
3. Make sure that fire doors, frames and hardware are produced under the auspices of a nationally recognized certification agency.
4. Insure products comply with the AHJ.
5. Insure products comply with NFPA 80. This pamphlet is the widely accepted standard for the use and installation of fire frames and doors.

Fire testing
Steel frames and doors have historically been subjected to full scale fire tests as a standard method for evaluating their performance and integrity relative to fire protection of property and life safety. Hollow metal doors were first submitted to Underwriters Laboratories for investigation and fire exposure testing in 1904. The agencies now associated with the testing, listing and labeling of products are two well known entities, Underwriters Laboratories and ITS/Warnock Hersey.

While the agencies have remained a constant in the industry, the standards against which products are evaluated are undergoing significant changes. This document will provide an overview of the changes and describe how Steelcraft has positioned their product line in compliance with NFPA 252 and UL10C Positive Pressure Fire Tests of Door Assemblies or NFPA 257 and UL9 Fire Tests of Fire Window Assemblies.
Steelcraft frames and doors approved for positive pressure
The products that conform to the positive pressure criteria (UL10 C) or NFPA252 are shown on the following sheets. These products also conform to the negative pressure test criteria (ASTM E152, UL10 B, etc.) and may be used in areas that do not require positive pressure fire frames and doors.
Steelcraft products do not require the use of intumescent seals to comply with UL10 C or NFPA252.

Guidelines & requirements
All fire door applications are subject to product and component limitations and requirements. The following are general guidelines in the use and selection of fire rated assemblies and their components:
1. Listed or approved fire door components are published and listed in Underwriters Laboratories "Certifications Directory", the ITS/Warnock Hersey "Directory of Listed Products" or the online FM "Approval Guide".
2. Only labeled doors and frames can be used in a fire rated opening.
3. Every labeled swing type fire door must include an approved self latching device, closing device and hinges.
4. Viewers must be listed in the Underwriters Laboratories "Certifications Directory", the ITS/Warnock Hersey "Directory of Listed Products" or the online FM "Approval Guide".
5. The actual fire rating of a Fire Door Assembly is the rating of the least rated component (door, frame or hardware)
6. Approved electronic monitoring devices can be used on fire doors.
7. The local AHJ is the final authority in application acceptance.

Astragals
1. Astragals are required per the manufacturer's published listings.
   - Astragals may not be required on double egress or other applications with 1 1/2 hour or less ratings. Refer to the appropriate listing pages in this section.
2. Astragals must be steel overlapping type. Weather stripping astragals rated for 3 hours (180 minutes) do not satisfy the astragal requirements for steel fire doors.
3. When astragals are used on pairs of doors equipped with fire exit hardware, a coordinator must be used to insure proper closing and latching sequence.
4. An astragal may be used on a pair of doors equipped with a mortise exit device on the active leaf and a vertical rod on the inactive leaf.
5. An astragal can not be used on pairs of doors swinging in the same direction equipped with double vertical rods, since the astragal will prevent the operation of one of the door leaves. Since 3 hour (180 minute) rated openings require an astragal, double vertical rod applications can not be used in pairs swinging in the same direction.
6. Astragals can be either screw attached or welded to the appropriate door.
7. Astragals are not used on pairs of doors with an open back strike.

Clearances
All clearances must be in accordance with NFPA Pamphlet # 80.

Closing devices
1. An approved closing device must be installed on every swinging fire door. Exception:
   - The inactive leaf of mechanical equipment room doors may omit a closer. Verify acceptance with the local building code and the AHJ.
2. Fire doors must be internally reinforced for closing devices. Exceptions:
   - Internal reinforcement is omitted if the closer is attached with sex bolts.
   - Internal reinforcement is omitted if spring hinges are used.
3. Overhead stops may be used if they do not inhibit the door from closing and latching.
4. Door holder/release devices are permitted when acceptable to the AHJ. These fail-safe devices release the door in the event of fire.
5. Labeled opening may incorporate concealed closers and stops.
**Coordinators**
1. A coordinator is required if an astragal or projecting latch bolt prevents the inactive door from closing before the active door.
2. A coordinator is not required if both leafs of a pair of doors closes and latches independently of each other.
3. When astragals are used on pairs of doors equipped with fire exit hardware, a coordinator must be used to insure proper closing and latching sequence.

**Dutch doors**
1. The upper and lower leaf may latch into the frame or the upper leaf may latch into the lower leaf, which latches into the frame.
2. The opening must include a closing device located on the upper leaf, and a horizontal astragal which will coordinate the closing and latching of the bottom leaf.
3. A label is required on each leaf of a dutch door and one on the frame.

**Exit devices**
1. Listed Fire Exit Hardware must be used. These exit devices are listed for both fire and panic applications.
2. The door size must not exceed the maximum listed size for the individual hardware manufacturers' listing for the device being used.
3. Doors which are reinforced for Fire Exit Hardware must bear a label which states "Fire Door to be Equipped with Fire Exit Hardware".
4. Vertical rod FEH may not be used on single doors. The exception would be a listed 3 point exit device.
5. Pairs of doors, swinging in the same direction, with vertical rod FEH on both leaves can not be used in 3 hour (180 minute) applications.
6. Rim FEH can not be installed with blade strikes in double door applications.
7. Rim FEH in pairs must include the use of a listed hardware mullion.

**Gasketing & edge seals**
1. Only listed gasket material can be used. Refer to the UL Fire Resistive directory or the ITS/WHI Directory of Listed Products.
2. Smoke and draft control assemblies must include gaskets listed for smoke and draft control.
3. Steelcraft fire rated doors do not require the use of edge seal (intumescent) systems.

**Glass & glazing**
1. Only approved glass can be installed in a fire door assembly.

**Hinges**
1. The proper quantity of hinges must be used. Based on NFPA Pamphlet 80:
   - Doors up to 60 inches in height shall be provided with 2 hinges and an additional hinge for each additional 30" of door height or fraction thereof.
2. Steelcraft doors over 96 inches may be prepared for .134" standard weight hinges.
3. Listed continuous hinges, electric hinges and pivots can be used on Steelcraft fire rated doors.
4. Doors with 4" hinges are limited to 20 gauge and a maximum door size of 3'0" x 7'0".

**Labels**
1. Steelcraft doors and frames can be supplied with a variety of metal or Mylar fire labels, attached by permanent adhesive. Other methods of attachment have been welding, rivets or drive screws.
2. Labels are attached only at the factory or at an authorized labeled distributors' shop.
3. All jobsite labeling must include a field (jobsite) inspection by the labeling agency and may require involvement of the AHJ.
4. Fire rated doors with continuous hinges have the fire label attached in the top channel of the door.

**Locks**
1. The door size must not exceed the maximum listed size for the individual hardware manufacturers' listing.
2. Dead locks may not be used on doors which are in a means of egress. Locks with deadbolts that are interconnected with latch bolts are retracted simultaneously when the latch bolt is retracted may be used with in a means of egress.
3. Deadbolts may be used on doors in addition to an active latch bolt on doors not in the means of egress, or as otherwise permitted by the AHJ.
Fire rated products  •  General information

Louvers
1. Any listed automatic fusible link louver can be used on a Steelcraft labeled door.
2. Glass lights are not permitted in doors equipped with louvers.
3. Fire Exit Hardware can be used on doors equipped with a louver, but only where approved by code.
4. Fire ratings for doors equipped with a louver can be either 1 1/2 hour (90 minutes) 1-hour (60 minutes) or 3/4 hour (45 minutes).
5. Maximum listed louver size 24" x 24" (one louver per door)
6. Location in the door:
   - Located in bottom half
   - Minimum 12" from door bottom
   - Minimum 5 1/2" from door edge to cutout.
7. Louvers cannot be installed in a means of egress and in:
   - The upper half of the door
   - 20 minute doors
   - Smoke & draft opening

Latch throw
1. Single doors:
   - 1/2" latch bolt throw for all door series, gauges and fire ratings.
2. Pairs of doors
   - A Series = 5/8"
   - B Series
     a. B18, B16 = 5/8"
     b. B14 = 5/8" For pairs of doors up to and including 1 1/2 hour (90 minute) and 3/4" over 1 1/2 hour
   - L Series:
     a. L20, L18, L16 = 5/8" up to 3 hours
     b. L14 = 5/8" For pairs of doors up to and including 1 1/2 hour (90 minute). 3/4" over 1 1/2 hour
   - T Series = 3/4"

Pairs of doors
1. The inactive leaf of doors must be provided with self-latching top and bottom bolts or automatic flush bolts or labeled two point latches. Manual flush bolts either mortised or surface may be used on doors to rooms not normally occupied by humans.
2. Double egress doors can only be provided with concealed or surface vertical rod FEH.
3. Open back strikes can be used on pairs of doors (L18/16/14, CE18/16, B18/16/14). Maximum height of 8’0" and a maximum 1 1/2 hour (90 minute) ratings. Astragals can not be used in this application.
4. Two doors in the same frame separated by a hollow metal mullion are considered to be two single doors applications.

Protective plates & plant-ons
1. Protection plates or kick plates can be a maximum 48" x 48" in size and attached to both faces of a door (3 hour maximum fire rating).
2. Plant-ons can be used if covered by a manufacturer’s listing service.

Smoke & draft
1. All components used in a Smoke and Draft Control assembly must pass a 20 minute without hose stream test.
2. Only gaskets listed for smoke and draft control may be used on smoke and draft control assemblies.
3. Gaskets must be listed for the appropriate door type (hollow metal, wood, etc.).
4. Wood doors which do not have an integral intumescent seal in the door edge, may require an intumescent edge seal and draft control gasket attached to the frame. Review the wood door manufacturer’s listing and requirements.

Temperature rise doors
1. Steelcraft T Series doors prepared for single point latches, rim or mortise FEH are labeled for 250°F temperature rise and may be used in either 250°F or 450°F temperature rise location.
2. Doors prepared for vertical rod (CVR or SVR) or INPACT™ devices carry a 450°F temperature rise label and can only be installed in 450°F temperature rise location.

Vision light requirements
1. Glass cannot be installed in exterior locations subject to severe fire exposure.
2. Any listed fire door vision kit can be used in a Steelcraft door. Vision kits should be listed for the appropriate door construction (hollow metal, wood, etc.) used.
3. Steelcraft vision kits are not approved for use in any other door manufacturers’ doors

Fire rated three sided frame

The three sided frames covered in this section have been tested in accordance with UL10C and NFPA252-1999, and listed by either Underwriters Laboratories (UL), Warnock Hersey (IT/WHI) and FM Global (FM). The ratings and sizes available are shown on the following pages.

Three sided frames are designed to be set on the floor and anchored to the wall construction. All frameanchoring must be in accordance with the installation instructions for the appropriate frame construction.

Three sided frames configurations

Labeled three (3) sided frames are available in the following configurations:

- Single opening: hinge jamb, strike jamb and head.
- Double opening: two hinge jambs and a head. Commonly referred to as pairs swinging in the same direction.
- Double swing with a mullion: two hinge jambs, a head and a mullion (stationary or removable). This opening configuration is actually considered as two single door openings.
- Double egress: a unique contoured frame (profiles) with two hinge jambs and a head. This opening configuration is used in corridor applications and consists of a pair of doors, each swinging in the opposite direction.
- Dutch doors: hinge jamb, strike jamb and head, used in storeroom applications.
- Multiple opening: a unique application having a combination of hinge and/or strike jambs, vertical mullions and head.
- Communicating openings: an application including a door(s) mounted in both rabbets, usually used in the hospitality markets and installed between adjoining rooms.

Approved frame series

Frames covered in this section are F, FN, FE, FP, FS, DE, DW, K, KS, C, CK, MU and MS. Regardless of the frame series being used, all frames must be installed into a fire rated wall.

Listing information covered

All listings covered in this section are for reference and assistance in developing overall parameters of approvals. Several variables such as hardware, wall construction, installation and application will affect the fire ratings. Individual manufacturer’s listings will take precedence.

All listings shown in this section conform to the requirements of UL 10C & NFPA252 test requirements.

Installation

Installation of all Steelcraft framing systems shall conform to the published Steelcraft installation instructions, ANSI/SDI A250.11 Recommended Installation Instructions for Steel Frames and HMMA-840. All fire rated frames must be installed in accordance with NFPA Pamphlet 80, and/or the local AHJ.

Details are subject to change without prior notice.

F, FN, and C Series frame construction

- **F** - Double rabbet
- **FN** - Single rabbet
- **F** - Casing-ready (welded)

MU Series frame construction

- **MU** - Double rabbet masonry
- **MU** - Single rabbet (narrow double)

DW, K and CK Series frame construction

- **DW** - Double rabbet
- **K** - Single rabbet (narrow double)
- **CK** - Casing-ready (knock-down)

Notes:
1. Frames over 9'0" in height and installed in stud walls require the jamb anchors to be welded to the frame. 2.4" heads are approved for all applications.

Minimum Hardware Requirements:
- Strike(s) depending on application for either:
  1. Flush, surface or automatic bolt in head
  2. Vertical rod inactive or both leafs
- Closer(s) depending on hardware applications and AHJ
  1. Active leaf
  2. Both leafs
- Approved hinges
Three sided frames for double doors with mullions

Double doors with removable mullions are used at entrances to buildings, corridor and equipment room applications. There are 2 types of removable mullion applications:

- Removable hardware mullion: for Rim FEH on each leaf application. Mullion must be fire rated
- Removable hollow metal mullion: for either Rim or Mortise FEH or listed latching hardware applications (8'0" x 8'0" maximum).

Notes:
1. Frames over 9’0” in height and installed in stud walls require the jamb anchors to be welded to the frame.
2. 4” heads are approved for all applications.
3. Three sided frame options for double doors:
   1. Removable hardware mullion
      - Maximum 3 hour rating.
      - Check hardware manufacturer’s listings for maximum ratings & height.
   2. Removable Steelcraft Hollow metal mullion
      - 2” face: only
      - 1 1/2 hour rating maximum, 8’0” maximum height
      - Application for either FEH or listed latching hardware
   3. Frames with fixed (welded) Steelcraft mullions are considered to be two (2) single door frames.
      - 2” face minimum, 4” face maximum
      - Maximum 3 hr. rating

F, FN, and C Series frame construction

- F: Double rabbet
- FN: Single rabbet
- C: Casing-ready (welded)

MU Series frame construction

- MU: Double rabbet masonry
- MU: Single rabbet (narrow double)

Minimum Hardware Requirements:
- Listed hardware mullion or Steelcraft hollow metal mullion
- Strike for both leafs
- Closer for both leafs
- Approved hinges
Fire rated products • Three sided frames

Three sided frames for double egress
Double Egress frames are designed to separate corridors into fire areas. The frame incorporates a pair of doors, which swing in opposite directions, without the use of a center mullion. Once the door and frame are installed, the doors line up in the center of the frame.

- **FE Series Double Egress Frames:** The jamb profile reduces the corridor width by $5 \frac{3}{4}$" (133 mm). Swing clear hinges cannot be used with a standard FE Series frame. A special profile FE Series frame can accommodate swing clear hinges.
- **DE Series Double Egress Frames:** The DE Series frame is designed to maximize corridor clear opening width. The jamb profile accommodates the use of swing clear hinges which is a major consideration in areas where the code requires a minimum clear opening width in corridor applications.

### Notes:

Double Egress frame options
1. Frames over 9’0” in height and installed in stud walls require the jamb anchors to be welded to the frame.
2. Net head width is $\frac{3}{8}$” narrower than standard double door frames.
3. Surface or concealed vertical rod FEH is the only approved latching hardware.
4. DE Series frame depth refers to the frame depth of the head section.
5. DE Series frames must be supplied welded
6. Mullions are not approved
7. 4” heads are approved for all applications.

### FE and DE Series Double Egress Frame Construction

- **FE Double Egress:** Jambs, Head
- **DE Double Egress:** Jambs, Head

### Minimum Hardware Requirements:

- Vertical rod on both leaves
- Closers both leaves
- Approved hinges
Three sided frames for multiple door openings

Multiple opening frames include 3 or more doors in one frame and are usually used in corridor applications which lead to theater or arena locations.

Notes:

Three sided frame options for multiple door openings:
1. Frames must be welded
2. Hollow metal hinge mullions must be welded in place
3. Face dimensions:
   - Jambs & head 4" maximum
   - Mullion face dimensions = 2" minimum 4" maximum
4. Elevation options:
   - Single doors
     - 4'0" x 8'0" max door size
   - Double doors (vertical mullion optional)
     - 8'0" x 8'0" max door size
     - doors must swing in same direction
   - Frames can not include transoms or side lights or panels
5. 4" heads are approved for all applications.

**F Series and FN Series Frame Construction**

**MU Series Frame Construction**

**Elevation Variations**

- Single Door Applications
- Single and Double Door Applications
- Double Door Applications

Minimum Hardware Requirements:
- Strike for each leafs
- Closer for each leafs
- Approved hinges
Three sided frames for dutch door frames
Dutch door frames are designed for use with Steelcraft labeled dutch doors, and are used in storeroom areas.

Notes:
Three sided frame options for dutch doors:
1. Strike preparations are required for both the top and bottom leafs, unless the top leaf latches into the bottom leaf.
2. 4" Face heads are approved for all applications

F Series Frame Construction

MU Series Frame Construction

Minimum Hardware Requirements:
- Strike for top and bottom leaf (see note 1).
- Closers (top leaf)
- Approved hinges
Three sided communicating frames
Communicating openings: an application including a door(s) mounted in both rabbets, usually used in the Hospitality markets and installed between adjoining rooms.

</table>

Notes:
Three sided frame options for single doors:
1. Frames over 9'0" in height and installed in stud walls require the jamb anchors to be welded to the frame.
2. 4" heads are approved for all applications.
3. The IBC currently allows for the omission of closers on communicating door assemblies in hotel/motel applications.
4. For DW & K Series, doors must be hung on opposite jambs.

F Series Frame Construction

MU Series Frame Construction

DW and K Series Frame Construction

Minimum Hardware Requirements:
1. Strike for single point latch
2. Closer (see note 2)
3. Approved hinges
Profile variations

The following frame profile variations or options may be specified on 3 sided frames and are approved as noted below by UL, ITS/WH and FM. For hourly ratings and approved opening sizes, refer to the appropriate frame applications pages of this manual.

DW and K Series Frame Construction
General information

Fire rated steel doors

Doors covered in this section have been tested in accordance with NFPA252 & UL10c, and listed by either Underwriters Laboratories (UL), Warnock Hersey (IT/WHI) or FM (FM). The ratings and sizes available are shown on the following pages.

Listed Steelcraft doors are for all commercial building applications. Variations in hardware and glass lights must be considered in the selection of the correct door construction.

Lights

Fire rated doors can be prepared for listed glass lights. The required hourly rating will dictate the approved glass lights available. (NOTE: Glass manufacturers listings and local/project-specific code requirements should be confirmed for each project. Maximum sizes will vary per rating/manufacturer.) Basic guidelines on glass are as follows:

- **3 hour**
  - Standard listed wire glass cannot be used.
  - Firelite or other appropriately listed glass:
    - FM maintains no glass with 3-hour rating.
    - UL & ITS/WH allow one (1) light with 100 in² (.06 m²) maximum visible glass. Maximum visible width of 12" (305 mm), maximum height of 33" (838 mm).

- **1 1/2 hour**
  - Standard listed wire glass: one (1) light with 100 in² per door leaf max.
  - Firelite or other appropriately listed glass:
    - FM maintains one (1) light with 100 in² per door leaf max.
    - UL & ITS/WH available up to 1850 in² max visible glass per light, max width 36", max height 54" (Dezigner trim max area is 1296 in²). Multiple lights permitted:
      - UL: provided each light does not exceed the 1850 in² maximum.
      - ITS/WH: provided each light does not exceed the 1850 in² max; maximum combined glass area may not exceed the published maximum glass area listing of the glass manufacturer.

- **1 hour (UL or ITS/WH only)**
  - Standard listed wire glass: one (1) light with 100 in² per door leaf max.
  - Firelite or other appropriately listed glass:
    - Available up to 2700 in² max visible glass per light, max width 36", max height 78" (Dezigner trim max height 54", max area 1296 in²)
    - Multiple lights permitted

- **3/4 hour**
  - Standard listed wire glass:
    - 1296 in² max visible glass per light, max width 36", max height 54". Multiple lights permitted, provided each light does not exceed the 1296 in² maximum.
  - Firelite or other appropriately listed glass:
    - FM maintains 1296 in² per door light max: multiple lights permitted, provided the 1296 in² maximum per light is not exceeded.
    - UL & ITS/WH available up to 2700 in² max visible glass per light, max width 36", max height 78" (Dezigner trim max height 54", max area 1296 in²)
    - Multiple lights permitted.

- **20 minutes without hose stream test: (UL&ITS/WH only)**
  - Standard listed wire glass:
    - 2700 in² max visible glass per light, max width 36", max height 78" (Dezigner trim max height 54", max area 1296 in²).

Louvres

Fire rated door can be prepared for one listed fire rated louver located in the bottom half of the door. Doors with louvers can only be located in equipment and mechanical areas of the building. FM does not allow the use of louvers in fire rated doors. Basic guidelines on louvers for UL & ITS/WH are as follows:

- **¾ hour, 1 hour and 1 1/2 hour listings.**
- **24" x 24" maximum louver size**
- **Glass lights can not be used in conjunction with louvers**

Door viewers

- **1 1/2 hour maximum fire listings.**
- **¾" maximum hole size.**
- **2 viewer preps maximum per door, minimum 12” apart.**
Approved door series
Regardless of the door series being used, all doors must be installed with labeled hardware, and into labeled frames and firewalls. Door constructions covered in this section are listed below:

- **A14 Series:** full glass with beveled edges
- **B Series:** welded steel stiffened core with beveled edges
- **CE Series:** laminated core with beveled edges and panel embossed face sheets
- **H & HE Series:** specifically designed for hurricane code applications
- **L Series:** laminated core with beveled edges and either honeycomb or polystyrene cores
- **PW Series:** specifically designed for tornado code applications.
- **SL Series:** laminated core with square edges and either honeycomb or polystyrene cores
- **T Series:** specially designed for maximum 250°F or 450°F temperature rise applications. 100 in² max visible listed glass.
- **TH Series:** 250°F or 450°F temperature rise for hurricane code applications - 100 in² max visible listed glass
- **LS Series:** laminated core with beveled edges and stainless steel face sheets

Temperature rise ratings
The Steelcraft doors are rated for temperature rise as follows:

- **T & TH series:** 250°F or 450°F temperature rise @ 30 minutes
- **All other series:** > 650°F @ 30 minutes

Listing information covered
All listings covered in this section are for reference and assistance in developing overall parameters of approvals. Several variables such as glass lights, hardware, wall construction and application will affect the fire ratings. Individual manufacturer listings will take precedence.

Installation
Installation of all Steelcraft doors shall conform to the published Steelcraft installation instructions, ANSI/SDI A250.11 Recommended Installation Instructions for Steel Frames and HMMA 840. All fire rated frames must be installed in accordance with NFPA Pamphlet 80, and/or the local AHJ.

Note: When steel top caps (screw-in) are applied to a fire labeled door with a continuous hinge prep or pocket pivots, the fire certification label is located underneath the cap. See other cap options and label locations in "Weather seals" on page 151.

Details are subject to change without prior notice.

Door light designs
Fire rated doors are available in the following door designs:

- **F** = Flush door with no glass cutout. 3 hour maximum listing.
- **V** = Vision light with a nominal 100 in² located in the upper half of the door. 3 hour maximum listing with appropriately listed glass (UL & WH). 1 ½ hour maximum listing (FM, or standard wire glass).
- **N3, N4, N5** = Narrow light variations, which are 100 in² exposed glass area, and located near the lock edge. 3 hour maximum listing with appropriately listed glass (UL & WH). 1 ½ hour maximum listing (FM, or standard wire glass).
- **N** = Narrow light varies with the door height, exceeds 100 in² of exposed glass area, and is located near the lock edge. 1 ½ hour maximum listing with appropriately listed glass (UL & WH). ¾ hour maximum listing (FM, or standard wire glass).
- **LNL** = Long narrow light, exceeds 54” visible glass height. 1 hour maximum listing with appropriately listed glass (UL & WH). Fire rating not available with standard wire glass, or with FM label.
- **G** = Half glass light (size will vary with the door size) located in the upper half of the door. 1 ½ hour maximum listing with appropriately listed glass (UL & WH). ¾ hour maximum listing (FM, or standard wire glass).
- **FG** = Full glass light. 1 hour maximum listing on L, A14 & H Series doors.
- **FG2 / FG3** = Full glass with multiple lights (size will vary with the door size). 1 ½ hour maximum listing with appropriately listed glass (UL & WH: see notes on WH limitations on page 317). ¾ hour maximum listing (FM, or standard wire glass).
- **Door viewers** = Must be fire rated construction. 1 ½ hour maximum. ¾” diameter hole maximum.

Notes:
1. For maximum rating and glass size requirements refer to glass light information
2. Pairs for 3 hour rating, the Inactive leaf with Surface or Concealed Vertical rod must be top and bottom latching (NO LBR)
3. Pairs for 1 1/2 hour rating can be equipped with LBR devices if the hardware manufacturer is approved for that application.
4. Mortise Fire Exit Devices x Closed back strike, w/Surface or Flush Bolts. Flush Bolts sets omit bottom bolt, using Fire Latch (pin), is acceptable per hardware manufacturer’s listing approval
5. Open back strike not permitted on this application

Details are subject to change without prior notice.
### Pairs without astragal: Swing in the same direction w/OBS

- **Active Leaf:** Mortise FEH
- **Inactive leaf:** Vertical Rod FEH, OBS (open back strike)

Details are subject to change without prior notice.
**General information**

**Fire rated transom and sidelights**

The transom and sidelight frames covered in this section, have been tested in accordance with UL 10C, NFPA 252 - 1999 and listed by either Underwriters Laboratories (UL), Warnock Hersey (ITS/WHI) and FM Global (FM). The ratings and sizes available are shown on the following pages.

Labeled transom and sidelight frames are welded prior to arriving at the jobsite and are available in the following configurations:

- **Transom Light frame**: A frame assembly which includes a fixed horizontal transom bar, and a light (window) directly above the door. The transom bar separates the door opening from the transom light. The door opening can be for:
  - Single door latching into end jamb or window/panel mullion
  - Two single doors with a center mullion
    - Rim FEH latching into hardware manufacturer's mullion
    - Lock/latch sets latching into hollow metal mullion
    - Double (pair) door without a mullion & swinging in same direction
- **Sidelight frame**: A frame assembly which includes both a fixed vertical mullion bar, and a light (window) adjacent to one or both sides of the door. The mullion bar separates the door opening from the side light. The door opening can be for:
  - Single door latching into end jamb or window/panel mullion
  - Two single doors with a center mullion
    - Rim FEH latching into hardware manufacturer's mullion
    - Lock/latch sets latching into hollow metal mullion
    - Double (pair) door without a mullion & swinging in same direction
- **Transom and Sidelight frame**: A frame assembly which includes a fixed horizontal transom bar, and a light directly above the door, and a fixed vertical mullion bar, and a light adjacent to one or both sides of the door. The door opening can be for:
  - Single door latching into end jamb or window/panel mullion
  - Two single doors with a center mullion
    - Rim FEH latching into hardware manufacturer's mullion
    - Lock/latch sets latching into hollow metal mullion
    - Double (pair) door without a mullion & swinging in same direction

**Approved frame series**

Frames covered in this section are F and MU. Regardless of the frame series being used, all frames must be installed into a fire rated wall.

**Size limitations**

Transom and side light frames must be shipped as welded units. Frames may be field spliced. For splicing details, refer to the Elevation Section of this manual. Maximum width, height and ratings shown on the following pages.

**Listing information covered**

All listings covered in this section are for reference and assistance in developing overall parameters of approvals. Several variables such as hardware, wall construction and application will affect the fire ratings. Individual manufacturer’s listings will take precedence. All listings shown on this section conform to UL 10C and NFPA 252.

**Installation**

Installation of all Steelcraft framing systems shall conform to the published Steelcraft installation instructions, ANSI/SDI A250.11 Recommended Installation Instructions for Steel Frames and ANSI A250.11 and HMMA 840. All fire rated frames and doors must be installed in accordance with NFPA Pamphlet 80, and/or the local AHJ.

Notes:
1. All frames must be shipped as welded units. Frames can be field spliced.
2. Door opening:
   - All frames can be prepared for use with a single or double door.
   - Maximum single door size = 4'0" x 10'0".
   - Maximum double door size = Max. 8'0" x 10'0".
   - Double door can be with or without vertical mullion.
   - Frame can have up to two single door openings or one pair door opening.
   - Pair opening doors must swing in same direction.
3. Glazing requirements:
   - All glass must be listed glazing material.
   - ½" thick laminated panels with mineral board core. Panel sizes are as follows:
     a. Transom panels = 96" wide x 38" high
     b. Side panels = 38" wide x 96" high
   - Glazing stop/bead requirements:
     a. Stop width minimum ¾" or as required by glazing manufacturer.
     b. Stop height minimum ¾" or as required by glazing manufacturer.
     c. Glazing bead minimum 18 gauge, or as required by glazing manufacturer.
4. Special profile may be necessary due to special thickness of glazing.
5. Frame profile variations:
   - Perimeter (Head and Jambs) frame
     a. Masonry walls = minimum face 1" (FN)
     b. Stud walls = minimum face 1 ¼"
     c. Maximum face 4" masonry, steel or wood stud walls.
   - Interior dividing members
     a. Members at door opening minimum face 1".
     b. Vertical maximum face 4 ½"
     c. Horizontal maximum 8".
   - Sill section Minimum Face 2", maximum 16 ½"
6. The use and installation of frames with 1 ½ hour (90 minute) ratings are subject to the approval of the local AHJ. These assemblies are tested and listed in accordance with UL10C and NFPA 252. Fire-protection-rated glazing materials must be installed in these assemblies. These assemblies are not tested in accordance with ASTM E119 or UL 263 (Fire Tests of Building Construction and Materials) and use of Fire-resistance-rated glazing materials will not make the frame compliant with ASTM E119 or UL 263.

Transom Frame / Sidelite Frame assemblies are tested and listed for fire protection in accordance with UL10C and NFPA 252. Where fire protection ratings are required, fire protection rated glazing shall be installed. The installation of fire resistance rated glazing does not qualify these assemblies for compliance with ASTM E119 or UL 263. The use and installation of transom sidelite frames are subject to approval of the AHJ.

Notes:
1. All frames must be shipped as welded units. Frames can be field spliced.
2. Door opening:
   - All frames can be prepared for use with a single or double door.
   - Maximum single door size = 4'0" x 10'0".
   - Maximum double door size = Max. 8'0" x 10'0".
   - Double door can be with or without vertical mullion.
   - Frame can have up to two single door openings or one pair door opening.
   - Pair opening doors must swing in same direction.
3. Wood doors and panels:
   - Maximum width, height, and rating based on wood door manufacturer’s listing.
4. Glazing requirements:
   - All glass must be listed glazing material.
   - Glazing stop/bead requirements:
     a. Stop width minimum 7 15/16" or as required by glazing manufacturer.
     b. Stop height minimum 5 3/8" or as required by glazing manufacturer.
     c. Glazing bead minimum 18 gauge, or as required by glazing manufacturer.
5. Special profile may be necessary due to special thickness of glazing.
6. Frame profile variations:
   - Perimeter (Head and Jambs) frame.
     a. Masonry walls = minimum face 1" (FN).
     b. Stud walls = minimum face 1 1/4".
     c. Maximum face 4" masonry, steel or wood stud walls.
   - Interior dividing members.
     a. Members at door opening minimum face 1".
     b. Vertical maximum face 4 1/2".
     c. Horizontal maximum 8".
   - Sill section Minimum face 2", maximum 16 5/8".
7. Wood panels can be used in conjunction with metal panels or glass.
8. Maximum jamb depth:
   - 14" if any glass is installed.
   - 12 3/4" if all wood panels.
9. The use and installation of frames with 1 1/2 hour (90 minute) ratings are subject to the approval of the local AHJ. These assemblies are tested and listed in accordance with UL10C and NFPA 252. Fire-protection-rated glazing materials must be installed in these assemblies. These assemblies are not tested in accordance with ASTM E119 or UL 263 (Fire Tests of Building Construction and Materials) and use of Fire-resistance-rated glazing materials will not make the frame compliant with ASTM E119 or UL 263.

Transom Frame / Sidelite Frame assemblies are tested and listed for fire protection in accordance with UL10C and NFPA 252. Where fire protection ratings are required, fire protection rated glazing shall be installed. The installation of fire resistance rated glazing does not qualify these assemblies for compliance with ASTM E119 or UL 263. The use and installation of transom sidelite frames are subject to approval of the AHJ.

### Notes:
1. Sizes may vary based on wood door manufacturer's listings.
2. F Series frames can be knocked down (KD).
3. MU Series must be shipped as welded units.
4. Maximum door size:
   - Single doors = see wood door manufacturer's listing.
   - Double doors = not approved
5. Panel requirements:
   - 1 3/4" thick wood panel.
   - Maximum panel size = 4'0" wide x 4'0" high.
   - Wood panel installed with spring bolts requires reinforcing or frame preparations.
6. Frame profile variations:
   - Perimeter (Head and Jambs) frame
   - Masonry walls = minimum face 1" (FN)
   - Stud walls = minimum face 1 1/4"
   - Maximum face 4" masonry, steel or wood stud walls.
7. Hardware applications:
   - Single door: follow standard label requirements.
8. Refer to wood panel manufacturer's listing for spring bolt attachment into the frame.

2. MU Series must be shipped as welded units.
3. Maximum door size:
   - Single doors = 4080i
   - Double doors = 8080 must swing in same direction
4. Panel requirements:
   - 1 ¾” thick steel panel
   - Maximum panel size:
     - Single doors = 48” wide x 48” high
     - Double doors = 96” wide x 48” high
5. Frame profile variations:
   - Perimeter (Head and Jambs) frame
   - Masonry walls = minimum face 1” (FN)
   - Stud walls = minimum face 1 ¾”
   - Maximum face 4” masonry, steel or wood stud walls.
6. Hardware applications:
   - Single door: follow standard label requirements.
   - Double doors: limited to flush bolts x single point latch or Mortise FEH.
Fire window frames

General information

Fire rated window frames

The fire window (borrowed light) frames covered in this section, have been tested in accordance with NFPA 257, and UL 9 and listed by either Underwriters Laboratories (UL), Warnock Hersey (IT/WHI) and FM Global (FM). The ratings and sizes available are shown on the following pages.

Fire window frames are commonly referred to as Labeled Borrowed Light Frames, and can be installed in labeled masonry, wood and steel stud wall constructions. They are available in both single and multiple lights and in the following applications:

- Sitting on the floor: Frame is located on the floor and anchored to both the floor and adjacent wall structures
- Above the floor: Frame is located above the floor line and is anchored into the surrounding wall structure.

The overall size of the fire window will vary with the type of wall construction it is installed in, and the location of the window in the wall. Generally, fire windows that sit on the floor can be of a larger size than those located above the floor and in the wall.

Approved frame series

Frames covered in this section are F, DW and MU Series. Regardless of the frame series being used, all frames must be installed into fire rated walls.

Size limitations

F and MU Series Fire Window frames with multiple lights must be shipped as welded units. Single glass pane F, MU and DW Series lights can be supplied KD (knock-down). Some frames may be field spliced. For splicing details, refer to the Elevation Section of this manual. Maximum width, height and ratings shown on the following pages. Width and height dimensions as shown in this manual can not be reversed.

Listing information covered

All listings covered in this section are for reference and assistance in developing overall parameters of approvals. Several variables such as wall construction and application will affect the fire ratings. Individual manufacturer’s listings will take precedence.

Installation

Installation of all Steelcraft framing systems shall conform to the published Steelcraft installation instructions, ANSI/SDI A250.11 and HMMA 840. All fire rated doors and frames must be installed in accordance with NFPA Pamphlet 80, and/or the local AHJ.

All listings shown in this section conform to the requirements of NFPA 257, and UL 9.

Notes:

1. All frames must be shipped as welded units, except single four sided frames with one light opening the maximum size depends on the glazing being used.

2. Glazing requirements:
   - All glass must be listed glazing material.
   - Glazing stop/bead requirements:
     a. Stop width minimum 7/16” or as required by glazing manufacturer.
     b. Stop height minimum 5/8” or as required by glazing manufacturer.
     c. Glazing bead minimum 18 gauge, or as required by glazing manufacturer.

3. Special profile may be necessary due to special thickness of glazing.

4. Frame profile variations:
   - Perimeter (Head and Jambs) frame.
     a. Minimum face 1”.
     b. Maximum face 4”.
   - Interior dividing members.
     c. Minimum face 1”.
     d. Maximum face 4 1/2”.
     e. Horizontal maximum 8”.
   - Sill section.
     f. Minimum face 2”.
     g. Maximum face 16 1/8”.

NOTE: The use and installation of fire window frames with 1 1/2 hour (90 minute) ratings are subject to the approval of the local AHJ. These assemblies are tested and listed in accordance with UL9 and NFPA 257. Fire-protection-rated glazing materials must be installed in these assemblies.

These assemblies are not tested in accordance with ASTM E119 or UL 263 (Fire Tests of Building Construction and Materials) and use of Fire-resistance-rated glazing materials will not make the frame compliant with ASTM E119 or UL 263.

Fire Window assemblies are tested and listed for fire protection in accordance with UL9, and NFPA 257. Where fire protection ratings are required, fire protection rated glazing shall be installed. The installation of fire resistance rated glazing does not qualify these assemblies for compliance with ASTM E119 or UL 263. The use and installation of transom sidelite frames are subject to approval of the AHJ.

Smoke and draft control

Typical Frame Elevations

All three (3) sided frame series and elevations shown in the Fire Rated Products section of this manual are approved for Smoke and Draft label applications.

Typical Door Elevations

Transom and Side Light Frames

Fire Window (Borrowed Light) Frames

Transom/Sidelight Frame elevations are listed for Smoke and Draft Control applications.

Fire Window (Borrowed Light) Frame elevations are not required to be listed for Smoke and Draft Control applications.

Doors and frames covered in this section have been tested or evaluated in accordance with UL 10C, and UL 1784 listed by either Underwriters Laboratories (UL) or Warnock Hersey. FM Global (FM) does not offer listings for Smoke and Draft rated products. The main components of a Smoke and Draft Rated assembly are:

1. Frame (steel fire rated)
2. Door (steel fire rated)
3. Hardware (fire rated and required)
4. Smoke Seals (fire/smoke control rated)
5. Fire Rated Wall
Frames (steel)
Smoke and Draft Rated Assemblies must include a Fire Rated Door Frame. Three sided frames are designed to be set on the floor anchored to the wall construction. All frame anchoring must be in accordance with the installation instructions for the appropriate frame construction.

Doors (steel)
Smoke and Draft Rated Assemblies must include a Fire Rated Door. Steelcraft doors are listed for most commercial building applications. Variations in hardware and glass lights must be considered in the selection of the correct door construction. Smoke and Draft Rated doors can be prepared for glass lights. The required hourly rating will dictate the approved glass lights available. All glass used in fire rated doors must be listed glass, and be either ¼" wire or other listed glazing material. Basic guidelines on glass are as follows:

- **3 hour**: flush door, no glass.
  - Exception: one (1) light with 100 square inches (.06 square meters) maximum of glass is permitted on 3 hour L, B, & T Series doors if Fire Light or other 3 hour listed glazing material is used. Maximum width of 12" (305 mm) or height of 33" (838 mm).
- **1 ½ hour**: 100 sq. in. per door leaf max.
  1296 square inches (.84 square meters) maximum of glass is permitted on 1 ½ hour L & B Series doors if Fire Light or other appropriately listed glazing material is used. Maximum width of 36" (914 mm) or height of 54" (1372 mm). UL listed doors may have multiple lights, provided each light does not exceed 1296 square inches of exposed glass area.
- **¾ hour**: 1296 sq. in. per light with neither dimension exceeding 54", unless listed otherwise.
  - Exception: ¾ hour doors may have multiple lights provided the limits of 1296 square inches per light and 54 inches are not exceeded.
- **20 minute**: 1296 sq. in. per light with neither dimension exceeding 54", unless listed otherwise.

Doors with louvers are not listed for use in areas requiring Smoke and Draft Ratings.

Gasketing
Smoke and Draft Rated Assemblies must include the appropriate Fire/Smoke Rated Seals.

Frames: Must have a UL10C/UL1784 Listed/Classified gasketing applied to the frame head and jambs, installed in accordance with the gasketing manufacturer's installation instructions.

Doors: Recommend a UL10C/UL1784 Listed/Classified gasketing applied to the meeting stile edges of pairs of doors which do not include an astragal.

Intumescent gasketing is not required for hollow metal doors installed in hollow metal frames.

The clearance between the door and frame, meeting edges of pairs of doors, and the floor and the bottom of the door must meet the requirements specified in NFPA-80.

Wood doors in steel frames: Refer to the wood door manufacturer's listing for gasketing required for their product to comply with UL10C/UL1784 listings.

Fire rated wall
The wall requirements for Smoke and Draft Control Assemblies are the same as conventional Fire Door Assemblies.

Hourly ratings
Smoke and Draft Rated Assemblies are mainly intended for use in 20 minute with out hose stream applications. Depending on building code requirements and the AHJ, they may be required in areas requiring ¾, 1 ½ or 3 hour listings.

Approved products
- Frames: F, FN, DW, K, FE, DE, and MU Series

Listing information covered
All listing covered in this section are for reference and assistance in developing overall parameters of approvals. Several variables such as hardware, wall construction and application will affect the fire ratings. Individual manufacturer's listing will take precedence.

Installation
Installation of all Steelcraft framing systems shall conform to the published Steelcraft installation instructions, ANSI/SDI A250.11 Recommended Installation Instructions for Steel Frames and HMMA 840. All fire rated frames must be installed in accordance with NFPA 80, and/or the Local AHJ.
Smoke barrier doors and frames

For use in cross corridor applications in healthcare occupancies
Intertek labeling only, strictly limited to non-latching, cross corridor, double egress applications in healthcare occupancies, and the 2006, 2009 and 2012 versions of the International Building Code as well as the NFPA Life Safety Code (2012) all allow for this special smoke barrier door opening. Basic guidelines as follows:

- Non-latching, double-egress application – latching hardware is not permitted
- No flush doors, louvers or view preps
- Must be a glazed glass door, utilizing listed fire-rated glazing
- Bottom of the visible glass must be 43 inches max from the floor
- Requires the use of overlapping steel astragals
- Max opening size is 8 foot x 9 foot (L18 / L16), 8 foot by 8 foot (SL18)
- Fire-rated double egress (FE/DE) frame must be used
- Must be automatic-closing by smoke detection

Use of this application, and any requirements for gasketing, to be determined and approved by the local AHJ.

Smoke and draft control doors and frames per NFPA 105 and UL 1784
Intertek labeling only. Any Steelcraft door or frame that qualifies for an Intertek/WH 20 minute fire rating without the hose stream test, will qualify for a smoke & draft only certification label. Basic guidelines as follows:

- Positive latching hardware required.
- Must be automatic-closing by smoke detection.
- Louvers are not permitted;
- Any glass light design is available. While compliance with UL10C & NFPA 252 is not required if the opening is not fire-rated, the door glazing material must be rated up to 400°F;
- Listed category ‘H’ gasketing is required for these openings;
- Pairs of doors may utilize an overlapping steel astragal with category ‘H’ gasketing applied, or may utilize meeting edge category ‘H’ gasketing;
- This smoke & draft only label is available for frames also, for applications needing to have that specifically indicated.
- Any fire-rated frame from 20 minutes to 3-hour maximum may be used in a smoke-only rated opening per NFPA 105. All of Steelcraft’s fire rated door opening frame labels display the ‘S’ designation for smoke-draft control, with the use of listed gasketing.

Use of this application, and any requirements for gasketing, to be determined and approved by the local AHJ.

General information

The use of product specifications does not always give a true comparison of the products that are used in today’s market. As an example, one manufacturer may use a different reinforcement in a product which is not included in the product specification. The reinforcement although superior in design and function may be deemed unacceptable using a product specification.

Established and recognized industry performance tests provide the truest method of comparing products. Performance test results give an accurate evaluation of the products being compared.

Manufacturers do not write performance tests. Industry associations, testing laboratories and standard associations write them. Included are:

- Underwriters Laboratories Inc (UL)
- Intertek Testing Services / Warnock Hersery (ITS/WHI)
- National Fire Protection Association (NFPA)
- American Society for Testing and Materials (ASTM)
- Steel Door Institute (SDI)
- Door and Hardware Institute (DHI)

In most cases after the performance test is written many people, groups and associations review the resulting performance specification before it becomes a recognized standard. As a result, the performance specification is accepted as the true measuring tool for products.

Performance tests

The pages included in this section describe the tests that have been conducted on the various Steelcraft products. Copies of the test report are available upon request through Steelcraft distributors.

Errors and omissions

Every effort has been made to insure the accuracy and completeness of the Steelcraft Spec Manual. This manual is for use by qualified persons only. The information herein is subject to some interpretation, and from time to time the Spec sheets will be updated whenever it is deemed necessary as new tests are conducted, new products are introduced and as specifications are revised. For these reasons and because of the nature and scope of the subject, the Steelcraft Manufacturing Company and its employees can assume no responsibility or liability for the absolute accuracy of the material contained herein or its use. The information in this Spec Manual is subject to change without notice and does not represent a commitment on the part of Steelcraft.

Please contact the Steelcraft Technical Service Department if you identify an error or an omission.

Physical endurance

**Cycle tests**

Door strength and durability is determined by either ANSI A250.4 or SDI 131-15 Accelerated Physical Test Procedure for Steel Doors, Frames and Anchors (formerly ANSI A250.5 Accelerated Physical Endurance Test Procedure for Steel Doors, Frames and Frame Anchors). These performance standards include both cycle and twist test requirements. In both tests the door is subjected to stresses that exceed those found in typical applications. During and at the end of the test, the technician is looking for metal fatigue, weld breakage, panel separation, delaminating, reinforcement failure and any other failures that occur.

ANSI/SDI A250.8-2014 “Recommended Specifications for Standard Steel Doors and Frames” specifies the minimum number of cycles for doors:

<table>
<thead>
<tr>
<th>Door Gauge</th>
<th>Cycles Tested</th>
</tr>
</thead>
<tbody>
<tr>
<td>20 gauge door</td>
<td>250,000 (Level C)</td>
</tr>
<tr>

<td>500,000 (Level B)</td>
</tr>
<tr>
<td>16 and 14 gauge door</td>
<td>1,000,000 (Level A)</td>
</tr>
</tbody>
</table>

ANSI A250.4

The door is mounted in a frame and is pushed to an open position of 60 degrees. The door is then closed using a conventional door closer.

**Cycle Test:** The cycle is repeated approximately 15 times per minute. The forces placed on the door in this test are determined by adjusting the closer speed.

**Twist Test:** At intervals prescribed by the test procedure, three corners of the door are clamped in place and a prescribed load applied to the fourth corner.

Steelcraft doors tested in accordance with ANSI A250.4 for extended life cycle.

This test simulates a door in actual operation. Steelcraft’s L Series construction was successfully tested in accordance With ANSI/SDI A250.4 for 5,000,000 cycles and 103 twist tests conducted at specified intervals throughout the cycle test. All tests are UL certified.
Performance and finishes • Physical endurance

SDI 131-15 (Previously ANSI A250.5)
The door is mounted in a test fixture and is rapidly cycled (opened and closed) by an air cylinder, or by an arm connected to an electric motor through a cam mechanism.

Cycle Test: The cycle is repeated a minimum of 60 cycles per minute. The closing forces applied to the door.

Twist Test: At test intervals prescribed by the test procedure, three corners of the door are clamped in place and the fourth corner is twist tested.

Steelcraft doors tested in accordance with SDI 131-15 for extended life cycle.

This test simulates an actual door in operation. Steelcraft’s L18 honeycomb core door was successfully tested in accordance with SDI 131-15 for 10,000,000 cycles and 21 twist tests conducted at different intervals throughout the cycle test.

Products tested: Door Model: L-18 3070

Test Results: After 10,000,000 cycles and 21 twist tests, the L-18 door demonstrated the following:

Twist tests
The twist test evaluates the door structure and clearly establishes the strength of the bonding or welding of the core material to the panels and the connection of the panels. The twist test is a required part of both ANSI 250.4 and SDI 131-15.

The door is placed into a structural steel opening and clamped into place at three corners. The unclamped corner is subjected to a force applied in 30 pound increments until a total of 300 pounds of force is applied. The force is removed in the same 30 pound increments until all of the force is off the door.

Measurements are taken at each 30 pound increment and at the 300 pound force. Additional measurements are taken at every 30 pound increment as the force is being removed. Five minutes after the force has been removed, a final reading is taken. This is the residual deflection the door has taken.

2. Maximum deflection shown is the pass/fail criteria in accordance with ANSI A250.4 and SDI 131-15.
Insulation factors

General information
Exterior doors are often used to block the transmission of temperature from one side to the other. Energy lost through a door opening is the result of both:

- **Thermal transmission**, through the door assembly, is stated as either the U-Factor or the R-Factor. These factors are covered on this page.
- **Air infiltration**, around the perimeter of the door, is stated as air leakage in CFM. This rating is covered on Page 2 of this sheet.

Thermal tests
Doors are tested in accordance with ASTM C1363 and SDI 113. The door assembly (or door only) is subjected to heat with the amount of loss measured.

Honeycomb core doors provide insulation through the small air pockets created by the hexagonal cells. The insulation of the honeycomb core is far better than a solid core wood door, insulated glass and concrete block walls. Polystyrene and polyurethane core doors are recommended where extreme temperature variations are prevalent.

**Note:** Corrected to ASHRAE winter design with 15 mph wind outside, still air inside.

Historical statement
Historically, SDI 113 required thermal transmission testing in accordance with ASTM C236-89(1993) "Standard Test Method for Steady-State Thermal Performance of Building Assemblies by Means of a Guarded Hot Box". In 2001 ASTM C236-89(1993) was withdrawn as an ASTM standard. SDI 113-13 was subsequently revised to require testing in accordance with ASTM C1363-05 "Standard Test Method for Thermal Performance of Building Materials and Envelope Assemblies by Means of a Hot Box Apparatus". This change in test methods results in significant changes in performance values which are not comparable between the current standard ASTM C1363 and the old standard ASTM C236. Architectural specifications must be carefully reviewed for compliance with the appropriate standard.
Air infiltration

**General information**
Air infiltration is one of the major factors in energy loss in a building. Poorly weather-stripped doors will lose far more heat and/or air conditioning due to infiltration of outside air than those from transmission through the door.

**Air infiltration testing**
Tests were conducted in accordance with ASTM E 283-04 to determine the air infiltration rate of a door and frame with and without weather stripping and door bottoms.

**Terminology**
The following terms are used to describe air infiltration around a door opening:
- **CFM** = Cubic Feet per Minute
- Air infiltration: a measurement of the air leakage around the perimeter of a door opening.

<table>

Finishes

General Information
Commercial steel frames and doors are designed to meet the requirements of ANSI/SDI A250.8-2017 (R2008) (previously known as SDI 100), and must receive a factory applied primer. The applied primer must be tested and meet the passing criteria of ANSI A250.10-2011 Test Procedure and Acceptance Criteria for Prime Painted Steel Doors and Frames.

Factory pre-treatment (surface preparation) prior to prime paint
Steel must be thoroughly cleaned and treated (phosphatized [also known as bonderize]) and a rust inhibiting primer applied. After fabrication the door panels or frame members are washed and de-greased though an automatic washing system. Phosphatizing is one of steps in this pretreatment process.

Phosphatizing
Phosphatizing makes it possible for paint to give the maximum protection to metal. There are two basic functions of phosphatizing:

1. Phosphatizing etches the metal and thereby provides an effective anchor for the paint. Bare metal surfaces allow only the minimum of paint adhesion. Phosphatized metal surface have an affinity for paint and keeps the paint from lifting off or peeling.

2. The phosphate coating is non-metallic and acts to keep out any moisture which might break the paint film and reach the base metal. A scratch on untreated metal breaks through the paint break and reach the base metal. Phosphatizing prevents the creep of rust and restricts the damage to the scratch itself.

When phosphatized metal is combined with Steelcraft's top quality baked-on, rust-inhibiting, prime paint, the maximum protection against rust has been achieved.

Steelcraft primers
All Steelcraft Frames, Doors and Architectural Stick components shall be cleaned, phosphatized and finished standard with one coat of factory baked-on, rust-inhibited primer in accordance with ANSI A250.10-2011 Test Procedure and Acceptance Criteria for Prime Painted Steel Surfaces for Steel Doors and Frames.

Omit prime paint is available for Steelcraft doors as cold rolled or galvannealed material. Frames must be primed from Blue Ash, OH, but can be omit prime paint from Chino, CA as galvannealed material only. Doors and frames without prime paint from the factory will limit the manufacturer's warranty.

Primer paint testing
The industry standard ANSI A250.10-2011 Test Procedure and Acceptance Criteria for Prime Painted Steel Doors and Frames is comprised of the following paint surface tests:

- Salt spray testing in accordance with ASTM B117-09.
- Condensation testing (humidity) in accordance with ASTM D4585-99.
- Film adhesion test in accordance with ASTM D3359-09e2.

Primer test results
Steelcraft factory applied baked-on primers conform to the industry standard ANSI A250.10-1998 with the following performance:

<table>
<thead>
<tr>
<th>Test</th>
<th>Standard</th>
<th>Hours</th>
<th>Results</th>
</tr>
</thead>
<tbody>
<tr>
<td>Salt Spray</td>
<td>ASTM B117-09</td>

<td>See Note 1</td>
</tr>
</tbody>
</table>

Notes:
1. 4B adhesion, which exceeds the test acceptance level of 3B.
2. Test procedure ANSI A250.10 is for factory primed steel doors and frames. To insure integrity of the prime painted coating, jobsite storage must be in accordance with sections 2 and 3 of this manual, ANSI/SDI A250.10 and HMMA 840.
3. Test procedure ANSI A250.10 is a performance standard for the factory prime applied to steel doors and frames. Film thickness of the primer is not mandated by this standard.
GRAINTECH™ stain
All doors shall be cleaned, phosphatized and prime painted with one coat of baked-on prime paint capable of accepting an oil-based stain.

The door shall be stained to simulate a ([specify one] Ash, Birch, Mahogany, Maple, Oak or Walnut) wood door. The finished stained product shall be protected with a clear top coat incorporating UV inhibitors. After finishing, the door shall be placed in a polybag and adequately wrapped to eliminate marring the surface finish during shipment and installation.

If doors are field stained to match or touch up, the finished product shall be protected with a clear top coat incorporating UV inhibitors.

GRAINTECH™ stain testing
The industry standard ANSI A250.3-2007 (R2011) Test Procedure and Acceptance Criteria for Factory Applied Finish Painted Steel Surfaces for Doors and Frames is comprised of the following paint surface tests:

- Salt spray testing in accordance with ASTM B117-03
- Condensation testing (humidity) in accordance with ASTM D4585-99
- Film adhesion test in accordance with ASTM D3359-02

GRAINTECH™ stain test results
Steelcraft factory applied baked-on finishes conform to the industry standard ANSI A250.3 with the following performance:

<table>
<thead>
<tr>
<th>Test</th>

Steelcraft finish paints
All Steelcraft Doors are available as optional factory finish products. These products are cleaned, phosphatized and finished with a factory baked-on, rust-inhibitive finish paint in accordance with ANSI/SDIA250.3-2007 (R2011) Test Procedure and Acceptance Criteria for Factory Applied Finish Steel Surfaces for Steel Doors and Frames.

- Gloss shall be 20°+/-5°F in accordance with ASTM Method Test D523
- See Steelcraft Literature Downloads to reference the 16 available standard colors http://us.allegion.com/IRSTDocs/DataSheet/105175.pdf
- Special colors are available upon request
- Available for all door series and all standard door heights (see Steelcraft Price Manual)
- Available in CRS and Galvannealed A-60 Steel
- Frames not available with factory finish paint

Finish paint testing
The industry standard ANSI A250.3-2007 (R2011) Test Procedure and Acceptance Criteria for Factory Applied Finish Painted Steel Surfaces for Doors and Frames is comprised of the following paint surface tests:

- Salt spray testing in accordance with ASTM B117-03
- Condensation testing (humidity) in accordance with ASTM D4585-99
- Film adhesion test in accordance with ASTM D3359-02

Finish paint test results
Steelcraft factory applied baked-on finishes conform to the industry standard ANSI A250.3 with the following performance:

Field paint procedures

Steelcraft frames and doors are furnished with a high grade, low gloss, baked-on prime paint that provides the best possible protection against corrosion, abrasion and weather, and is an excellent base for finish paint.

This is a primer and requires field finishing. If the primed surface is removed or damaged, the exposed metal must be reprimed with a suitable rust inhibitive primer before top coating with a latex finish paint.

The application of the paint, using either a brush, roller or spray equipment, shall be in accordance with the paint manufacturer’s recommendations. If spray equipment is used, consult with the paint supplier on recommendations for correct thinner or solvents. Do not use lacquer thinner or other solvents that may react on the primer coat.

Products

These field painting procedures apply to ALL Steelcraft products.

Air dry applications

To obtain the best results, use the following procedures:

1. Avoid painting in extremely cold or damp weather. Suggested temperature range 50°F to 90°F.
2. Sand door and frame surfaces lightly with No. 300 or 320 emery cloth or steel wool.
3. Clean door and frame surfaces using a mild solvent such as mineral spirits or a mild citrus cleaner. Do not use strong cleaning agents, acids or lacquer thinner.
4. Dry door surfaces. Do not use oiled or tack rags to dry door surfaces.
5. Apply finish paint following manufacturer’s recommendations.

Notes:

1. Latex paints may require, depending on atmospheric conditions, up to 30 days before the paint is fully cured.
2. To avoid rusting with latex topcoat paints, it is recommended to sand and re-prime with a rust inhibitive primer any areas where the factory applied primer has been removed or scratched through.
3. An eggshell sheen is recommended. The USE OF HIGH GLOSS PAINT IS NOT RECOMMENDED, ESPECIALLY ON B SERIES. All internal steel stiffeners are welded to both face sheets. High gloss paint accentuates the visibility of all welds.
4. Steelcraft hollow metal doors and frames are factory painted providing finish integrity in accordance with test procedures ANSI A250.10 or ANSI A250.3. Jobsite storage and handling is critical. To insure integrity of the prime painted coating, jobsite storage must be in accordance with sections 2 and 3 of this manual, ANSI/SDI A250.10 and HMMA 840.
5. Powder coating of doors is not recommended as the high temperature can cause delamination of door cores from the inside face panel.

Field baked-on finishes

To obtain the best results, use the following procedures:

1. Avoid painting in extremely cold or damp weather. Suggested temperature range 50°F to 90°F.
2. Sand door surfaces lightly with No. 300 or 320 emery cloth or steel wool.
3. Clean door surfaces using a mild solvent such as mineral spirits or a mild citrus cleaner. Do not use strong cleaning agents, acids or lacquer thinner.
4. Dry door surfaces. Do not use oiled or tack rags to dry door surfaces.
5. Apply finish paint following manufacturer’s recommendations.
6. Bake frames and doors as specified by paint manufacturer and outlined below:

<table>
<thead>
<tr>
<th>Oven Temperatures:</th>
</tr>
</thead>

Frame back coating

(bituminous alternative) certification and benefits

Steelcraft Frame Back Coating is UL certified up to 3-hours in fire rated masonry applications. The back coating is to be applied by distributors in their shop or in the field for the purpose of creating a secondary barrier to resist corrosion from moisture on the interior of frames (frame throats) prior to grouting masonry frames.

We offer this coating in an aerosol spray can as well as (1) one-gallon and (5) five gallon pails which can be applied by spraying or brushing.

Steelcraft’s Frame Back Coating is a bituminous alternative. It is a specially formulated, modified asphaltic emulsion with significant advantages over traditional bituminous coatings which can be hazardous, difficult to apply and messy.

Benefits include the following:

- Non-flammable (UL certified up to 3-hours in fire-rated masonry applications)
- Virtually odorless
- VOC & HAPS Free
- Waterborne Safe
- Dries Quickly
- Excellent Adhesion
- Sprayable
- Won’t easily rub off
Technical information

- Composition: Waterborne Asphaltic Emulsion Coating (bituminous alternative)
- Solids: 57-63%
- Finish: Black, semi-gloss
- Flash Point: None (flash point is the lowest temperature at which the emulsion can vaporize to form an ignitable mixture in the air)
- Shelf life: 12 months
- Storage: Suggested Storage temperature 50°F to 130°F. **DO NOT ALLOW BACK COATING EMULSION TO FREEZE.**
- Odor: Minimal
- VOCs: None
- HAPS: None
- US DOT: Not Regulated Usage

A quality corrosion-resistant coating should be applied.

Usage

A quality corrosion-resistant coating should be applied to the interior of metal frames (frame throats) in circumstances where moisture might enter the frame, causing degradation of the frame. This is a particularly good practice when grouting frames with mortar in masonry applications. (Note grouting frames in drywall applications and using plaster-based grout is not recommended.)

Some of the common circumstances for grouting are listed here:

- Stability for heavy or frequent usage
- Security to deter break-ins where the frame might be compromised
- Sound deadening
- To increase frame anchorage strength

Industry guidelines recommend that the installer be responsible for grouting and any barrier coating required.

Air dry application instructions

To obtain the best results, use the following information:

1. Steelcraft factory applied primer should be in place (see page 358). Reapply as needed. Be sure primer is dry before applying back coating (normally 15-30 minutes for water-based primers in ambient conditions); Use the thumb test (put full weight behind thumb against surface and twist 90°).
2. Avoid applying back coating in extremely cold or damp weather: suggested temperature range is 50°F to 90°F. Best practice is to allow back coating and frame to warm to room temperature before applying. Agitate (shake/stir) prior to use. Water may be added to thin as needed, but care must be taken as this may change dry times, DFT (dry film thickness) and/or ability of coating to provide the proper corrosion resistance.
3. No scuffing is recommended when applying back coating over Steelcraft Primer.
4. Make sure the Surface is clean, dry and free of grease, rust and wax. Do not use strong cleaning agents, acids or lacquer thinner. Do not use oiled or tack rags to dry frame surfaces.
5. Mask off or protect areas from overspray, if necessary.
6. Apply frame back coating by spraying or brushing.
7. At installation, it is recommended to touch up areas of the frame with Steelcraft Primer and Back Coating in order to cover any bare metal on the inside of the frame to avoid corrosion. Reference (1) above.
8. Recommended application of coating is to spray or brush at 5-6 mils WFT (wet film thickness) for a cure to 3 mils DFT (dry film thickness). A minimum 2.5 mil DFT should be held to avoid performance issues and a maximum 5 mil DFT to avoid sagging. Results may vary depending upon specific application and conditions.
9. Allow to dry to touch/non tacky (10 minutes in ambient conditions) before applying a second coat, if necessary.
10. See product packaging for further recommendations. Technical support can be reached at 877-671-7011, option 2, then option 5.

**Note:** Information, recommendations and suggestions provided on this page may differ based on specific material, conditions and other variables.

Specifications

**General information**
Steelcraft doors, frames and stick systems are subject to compliance with specifications and information published by architects, specification writers, industry associations and regulatory agencies. Compliance with the architect’s plans and specifications is expected, however, the accuracy, content and structure of the specification are critical to insure that the product construction and expected performance levels are achieved. Utmost experience and care should be taken in the preparation and submission of Architectural Specifications, to ensure that the proper product construction and performance is supplied to the purchaser. Privately written material specifications sometimes combine selective attributes and performance levels of various products. In the end, an improperly prepared Hollow Metal Specification may compromise the intended products’ construction and performance, and possibly compromise the integrity, and complicate the enforcement of the specifications and required products.

This section of the Technical Manual has been compiled to help understand the content and intent of the specifications used with the Steelcraft Steel Doors and Frames.

**Types of specifications**
The published specifications most commonly used in the Door and Hardware Industry fall into four broad categories:

- **Architectural specifications:**
  - These specifications are prepared by specification writers and published by individual architectural firms. These specifications are based on either historical preference or an Architectural and Industry Association such as the Construction Specification Institute (CSI), the Steel Door Institute (SDI) or the National Association of Metal Manufacturers (NAAMM).
  - A Steelcraft reference guide specification, in the CSI format, can be found in this manual starting on the next page.

- **Manufacturer’s specifications:**
  - These specifications are published by the manufacturer of a product. The product’s construction and performance levels are documented through tests conducted either privately or independently.
  - Steelcraft product specifications are found in this manual starting on the next page.
  - This technical data manual is always your best literature resource for the most up to date product details.

- **Industry/Trade association specifications:**
  - (Reference Standard) These specifications are developed and published by Industry Associations as a result of the input of all member companies.
  - Steelcraft conforms to specification ANSI A 250.8-2017, published by the Steel Door Institute (SDI).

- **Performance and material specifications:**
  - These specifications will specify required results and will describe product life cycles with focus on the design criteria, assembly and performance of the components used in door and frame products, such as steel and paint.
Section 08110 steel doors and frames

Part 1: General

1.01 Section includes

A. Steel doors
B. Steel frames
c. Steel architectural stick systems

1.02 Related sections

A. Section 08210: Wood Doors
B. Section 08220: Plastic Doors
C. Section 08710: Door Hardware
D. Section 08800: Glazing
E. Section 09900: Paints and Coatings
F. Section 13710: Intrusion Detection: Security system
G. Section 13800: Building Automation and Control: Building monitoring system
h. Section 16123: Building Wire and Cable: Power supply to electric hardware devices

1.03 References

It is the intent of this specification that all hollow metal and its application will comply or exceed the standards as listed. The latest published edition of each reference applies.

A. ASTM: American Society for Testing and Materials

2. ASTM A 924: Specification for General Requirements for Steel Sheet, Metallic Coated by the Hot Dip Process.
5. ASTM E 413: Classification for Rating Sound Insulation.

B. ANSI: American National Standards Institute

2. ANSI A156.7: Hinge Template Dimensions.
4. ANSI A250.4: Test Procedure and Acceptance Criteria for Physical Endurance for Steel Doors and Hardware Reinforcing.
5. ANSI A 250.8: SDI-100 Recommended Specifications for Standard Steel Doors and Frames.
6. ANSI A 250.10: Test Procedure and Acceptance Criteria for Prime Painted Steel Surfaces for Steel Doors and Frames.
7. ANSI/SDI 250.11: Recommended Erection Instructions for Standard Steel Frames

C. SDI: Steel Door Institute

1. SDI 105: Recommended Erection Instructions for Steel frames.
2. SDI 111: Recommended Details and Guidelines for Standard Steel Doors and Frames and Accessories.
3. SDI 111-H: High Frequency Hinge Preparation
6. SDI 118: Basic Fire Door Requirements.

D. NAAMM/HMMA: Hollow Metal Manufacturers Association
1. **HMMA 840**: Guide Specification for Installation and Storage of Hollow Metal Doors and Frames
2. **HMMA 820 TN01-03**: Grouting Hollow Metal Frames

**Spec Writer’s Note:** Delete the standards which are not applicable to your area.

### E. Building Code references
1. **NFPA 80**: Standard for Fire Doors and Other Opening Protectives.
2. **NFPA 105**: Standard for the Installation of Smoke Door Assemblies and Other Opening Protectives
3. **NFPA 252**: Standard Method of Fire Tests of Door Assemblies
5. **UL 1784**: Air Leakage Tests of Door Assemblies
6. **UL**: Building Materials Directory; Underwriters Laboratories Inc.
7. **WH**: Certification Listings; Warnock Hersey International Inc.
8. **Federal Emergency Management Agency** (FEMA) 361 Guidelines
9. Miami-Dade County test protocols PA 201, PA 202 and PA 203.
10. **Florida Building Code** test protocols TAS 201, TAS 202 and TAS 203

### 1.04 Requirements of regulatory agencies

**A.** Doors and frames to conform to applicable codes for fire ratings. It is the intent of this specification that all hardware and its application comply or exceed the standards for labeled openings. In case of conflict between types required for fire protection, furnish type required by NFPA and UL.

1. Interior vertical stairwell doors will carry a minimum 250°F (121°C) temperature rise rating in addition to the required fire rating.

### 1.05 Submittals

**A.** Submit for review six (6) complete copies of the hollow metal shop drawings covering complete identification of items required for the project. Include manufacturer’s names and identification of product. Included six (6) complete copies of catalog cuts and/or technical data sheets and any other data as may be required to show compliance with these specifications.

1. The data on the Shop Drawing will be complete with respect to quantities, dimensions, specified performance, and design criteria, materials and similar data to enable the Architect to review the information as required.

**B.** Indicate frames configuration, anchor types and spacing, location of cutouts for hardware, reinforcement, to ensure doors and frames are properly prepared and coordinated to receive hardware.

**C.** Indicate door elevations, internal reinforcement, closure method, and cutouts for glass lights and louvers.

**D.** Submit manufacturer’s installation instructions, including a copy of ANSI A250.11-2012 as part of the shop drawing submittal.

**E.** Shop drawings, product data, and samples to bear the Contractor’s stamp verifying they have been coordinated and reviewed for completeness and compliance with the contract documents.

**F.** Shop drawings submitted without the above requirements will be considered incomplete, will NOT be reviewed, and will be returned directly to the Contractor.

**G.** Follow the same procedures for re-submittal as the initial submittal with the appropriate dates revised.

### 1.06 Quality assurance

**A.** Select a qualified hollow metal distributor, who is a direct account of the manufacturer of the products furnished. In addition that distributor must have in their regular employment an Architectural Hardware Consultant (AHC), a Certified Door Consultant (CDC) or an Architectural Openings Consultant (AOC), who will be available to consult with the Architect and Contractor regarding any matters affecting the door and frame opening.

**B.** Furnish materials and work performed in conformity with the contract documents.

**C.** Conform to requirements of the above reference standards. Submit test reports upon request by the Owner or Architect.

**D.** Underwriters’ Laboratories and Warnock Hersey, labeled fire doors and frames:

2. Construct and install doors and frames to comply with current issue of ANSI/NFPA 80.
3. Manufacture Underwriters’ Laboratories labeled doors and frames under the UL factory inspection program and in strict compliance to UL procedures, and provide the degree of fire protection, heat transmission and panic loading capability indicated by the opening class.
4. Manufacture Warnock Hersey labeled doors and frames to meet the specific requirements of that labeling agency’s current procedure for the tested hourly rating designated and inspected by representatives of the labeling agency.
5. Affixed physical label or approved marking to fire doors and/or fire door frames, at an authorized facility as evidence of compliance with procedures of the labeling agency. Label embossment is not permitted.

6. Conform to applicable codes for fire ratings. It is the intent of this specification that hardware and its application comply or exceed the standards for labeled openings. In case of conflict between types required for fire protection, furnish type required by NFPA and UL.

7. Fire door assemblies in exit enclosures and exit passageways must have a maximum transmitted temperature end point of not more than 250°F (121°C) above ambient at the end of 30 minutes of the standard fire test exposure.

Spec Writer's Note: Choose the appropriate Severe Storm Products where applicable. Delete this section if not applicable.

E. Severe Storm Products:

1. **Tornado Doors:** Door, Frame, Hardware and Accessory Systems for Federal Emergency Management Agency (FEMA) community shelters and other areas of refuge to resist the design wind pressures and missile impact loads as detailed in Design and Construction Guidance for Community Safe Rooms - FEMA 361. Door and Frame Systems shall also be listed in compliance with ANSI / ICC500-2014 - Standard for the Design and Construction of Storm Shelters.

2. **Hurricane Doors:** Door systems required to comply with the Miami-Dade County Product Control Approval System or the Florida Building Code Approval System meeting the requirements of Miami-Dade County test protocols PA 201, PA 202, PA 203 and Florida Building Code test protocols TAS 201, TAS 202 and TAS 203.

F. Manufacturer Qualifications: Member of the Steel Door Institute.

**g. Installer:** Minimum five years documented experience installing products specified in this Section.

1.07 Delivery, storage, and handling

A. Storage of Doors

1. Store doors vertically in a dry area, under proper cover. Place the units on at least 4" high wood sills on floors in a manner that will prevent rust and damage. Avoid use of non-vented plastic or canvas shelters, which create a humidity chamber and promote rusting. If the door becomes wet, or moisture appears, remove any protective wrapping immediately. Provide a 4" space between the doors to permit air circulation. Proper storage is required to meet the requirements of ANSI/SDI A250.10 and HMMA 840.

B. Storage of Frames

1. Store frames in an upright position with heads uppermost under cover on 4" wood sills on floors in a manner that will prevent rust and damage. Do not use non-vented plastic or canvas shelters, which create a humidity chamber and promote rusting. Store assembled frames in a vertical position, five units maximum in a stack. Provide a 2" space between frames to permit air circulation.

2. Provide proper storage for doors and frames, to maintain the quality and integrity of the factory applied paint, and maintain the requirements of ANSI/SDI A250.10 and HMMA 840.

3. Sand, touch up and clean prime painted surfaces prior to finish painting in accordance with the manufacturer's instructions.

1.08 Coordination

**c.** Coordinate Work with other directly affected sections involving manufacture or fabrication of internal cutouts and reinforcement for door hardware, electric devices and recessed items.

4. Coordinate work with frame opening construction, door and hardware installation.

5. Sequence installation to accommodate required door hardware.

6. Verify field dimensions for factory assembled frames prior to fabrication.

Part 2: Products

2.01 Doors

A. Construct exterior/interior doors to the designs and gauges as specified:

Spec Writer's Note: Choose one of the appropriate steel thickness and type.

1. Exterior Doors: Hot-dip galvannealed steel, ASTM A 653, Class A60, 18 gauge [0.042" (1 mm)], 16 gauge [0.053" (1.3 mm)] or 4 gauge [0.067" (1.7 mm)] hot dipped galvannealed steel, with closed tops.
   a. Include galvannealed components and internal reinforcements with galvannealed doors.
   b. Close tops of exterior swing-out doors to eliminate moisture penetration. Galvannealed steel top caps are permitted.

2. Interior Doors: Cold rolled steel, A 1008, 20 gauge [0.032" (.8 mm)], 18 gauge [0.042" (1 mm)], or 16 gauge [0.053" (1.3 mm)] cold rolled or galvannealed steel.
   a. Include galvannealed components and internal reinforcements with galvannealed doors.

Spec Writer's Note: GRAINTECH™ and finish paint are finish options. Delete these options when not applicable.
3. GRAINTECH™ factory finished doors indicated on door schedule as HMGT.
4. Factory prime painted doors indicated on door schedule as HM.
5. Hardware Reinforcements:
   a. Hinge reinforcements for full mortise hinges: minimum 7 gauge [0.180" (4.7 mm)].
   b. Lock reinforcements: minimum 16 gauge [0.053" (1.3 mm)].
   c. Closer reinforcements: minimum 14 gauge [0.067" (1.7 mm)], 20" long.
   d. Galvannealed doors include galvanized hardware reinforcements.
   e. Projection welded hinge and lock reinforcements to the edge of the door.
   f. Provided adequate reinforcements for other hardware as required.

B. Full Flush Type Doors Construction
1. Doors construction conforming to ANSI-A250.4 criteria and tested to 5,000,000 operating cycles.
2. Approved door core constructions:

Spec Writer’s Note: Choose one of the appropriate door core types.

   a. Honeycomb: Reinforced, stiffened, sound deadened and insulated with impregnated Kraft honeycomb core completely filling the inside of the doors and laminated to inside faces of both panels using contact adhesive applied to both panels and honeycomb core.
   b. Polystyrene: Reinforced, stiffened, sound deadened and insulated with a rigid polystyrene core bonded to the inside faces of both panels with contact adhesive. All Polystyrene doors are full width and height polystyrene core filled.
   c. Steel Stiffened: Vertically steel stiffeners and sound deadened with fiberglass batt insulation. Fabricate hat shaped stiffeners from 20 gauge [0.026" (0.6 mm)] steel. Vertical interior webs located 6" (152 mm) apart, welded to the inside of one face sheet and bonded to opposite face at 5" (127 mm) on center. Fill areas between stiffeners with fiberglass.
   d. Temperature Rise Doors: Mineral fiber core material to comply with the 250° F (121° C) maximum temperature rise rating.

Spec Writer’s Note: GRAINTECH™ is a finish options. Delete this section when not applicable.

   e. GRAINTECH™ Doors: Fabricated from steel that has an embossed wood grain pattern extending the full height and width of the door. Provide doors with continuous vertical mechanical inter-locking joints at lock and hinge edges with visible edge seams. The wood grain embossment minimum .005" deep. The wood grain face sheets must be cleaned, phosphatized and prime painted with a stain absorbing primer. Vertical edges must be stained using conventional stains to achieve a (select 1) [ash, birch, mahogany, maple, oak, walnut] color. After staining, the door must be clear coated with UV inhibitors. Applied grain pattern or material will not be permitted

3. Vertical edge seams: Provide doors with continuous vertical mechanical inter-locking joints at lock and hinge edges with visible edge seams, or a one piece full height 14 gauge channel. Apply a continuous bead of structural epoxy in the internal vertical connection.

Spec Writer’s Note: Choose one of the appropriate door edges.

   Edges seam options:
   a. Filled Vertical Edges (F): Continuous vertical mechanical interlocking joint with internal epoxy seal; edge seams filled with structural adhesive and ground smooth.
   b. Welded Vertical Edges (W): Continuous vertical mechanical interlocking joint; edge seams welded, filled with structural adhesive, and ground smooth.
4. Bevel hinge and lock door edges 1 6/8 inch (3 mm) in 2 inches (50 mm). Square edges on hinge and/or lock stiles are not acceptable.
5. Reinforce top and bottom of doors with galvannealed 14 gauge, welded to both panels.

Spec Writer’s Note: Choose the appropriate Severe Storm Products where applicable. Delete this section when not applicable.

C. Tornado Door, Frame, Hardware and Accessory Systems must comply with Federal Emergency Management Agency (FEMA) 361 Guidelines and provides the highest level of security and safety for tornado shelters and severe storm areas of refuge. Door Systems shall also be listed in compliance with ANSI / ICC500-2014 - Standard for the Design and Construction of Storm Shelters.

1. Face sheets: 14 gauge [0.067" (1.7 mm)] hot-dipped galvannealed steel having an A60 zinc-iron alloy coating conforming to ASTM designations A653 and A924.
2. Hinge and lock edges: include continuous vertical mechanical joints with edge seams welded, filled and ground smooth.
3. Bevel all hinge and lock door edges 1 6/8 inch (3 mm) in 2 inches (50 mm). Square edges on hinge and/or lock stiles are not acceptable.
4. Galvannealed 14 gauge [0.067" (1.7 mm)] top and bottom steel reinforcement channels projection welded to both face sheets on 4 inches (102 mm) centers.

5. **Hinge reinforcements:** minimum 7 gauge [0.167" (4.4 mm)] galvanized steel, projection welded to the edge of the door.

6. Reinforce door faces with vertical stiffeners manufactured from steel conforming to ASTM A653 and A924 and welded to each face sheet.

7. Reinforce lock stiles with full-height 12 gauge [0.093" (2.5 mm)] channels.

8. **Fire Rated doors:** Provide door units bearing Labels for fire ratings required in locations indicated.

D. **Hurricane Doors:** Designed to resist the cyclic pressures, static pressures and missile impact loads as detailed in the Miami-Dade County Product Control Approval System of the Florida Building Code Approval System and meets the requirements of Miami-Dade County test protocols PA 201, PA 202, PA 203 and Florida Building Code test protocols TAS 201, TAS 202 and TAS 203.

E. **Electrical Requirements:**
   1. **General:** Coordinate electrical requirements for doors and frames. Make provisions for installation of electrical items arranged so that wiring can be readily removed and replaced.
   
   2. **Doors with Electric Hinges:**
      a. **General:** Furnish conduit raceway to permit wiring from electric door hardware.
      b. **Hinge Locations:** Provide electric hinge at intermediate or center location. Top or bottom electric hinge locations are not acceptable.
      c. Refer to 08710 for electrified hardware items.

2.02 Door frames
A. Construct exterior and metal door frames to the profiles, designs and gauges as specified.

**Spec Writer’s Note:** Choose one of the appropriate steel thickness and type.

1. **Exterior Frames:** Hot-dip galvannealed steel, ASTM A 653, Class A60, 16 gauge [0.053" (1.3 mm)] or 14 gauge [0.067" (1.7 mm)] hot dipped galvannealed steel.
   
   a. Include galvannealed components and internal reinforcements with galvannealed frames.

2. **Interior Frames in Masonry:** 16 gauge [0.053" (1.3 mm)] cold rolled or galvannealed steel.
   
   a. Include galvannealed components and internal reinforcements with galvannealed.

3. **Interior Frames in Drywall:** 16 gauge [0.053" (1.3 mm)] cold rolled frames.

B. **Flush Frames:** knocked down for field assembly or set-up and arc-welded with temporary shipping bars. Factory die-mitered corner connections reinforced with four integral tabs to secure and interlock at jambs to head. Unless otherwise indicated, frame will have 2" faces and 9½" stops. Frame depths per the architectural door schedule

1. Provide frames with a minimum of six wall anchors and two adjustable base anchors of manufacturer’s standard design.

C. **Drywall Frames:** same as flush frames, 16 gauge except:

1. Form frames with double return backbends to prevent cutting into drywall surface. Design knock down frames to be securely installed in the rough opening after wallboard is applied.
   
   a. **Drywall frames:** knocked down for field assembly. Factory die-mitered corner connections reinforced at miters, including soffit tabs to secure and interlock at jambs to head
   
   b. Locate adjustable anchors in each jamb 4" from the top of the door opening to hold frame in rigid alignment.
   
   a. Provide security anchor at strike jambs on all frames 7΄6" high and over.

3. **Base anchor options:**

   **Spec Writer’s Note:** Choose one of the appropriate base anchoring systems.

   a. Weld-in base anchor attaching plate in each jamb for field installation of loose base anchors to allow proper anchoring at base of frame.
   b. Dimpled holes and face screw application.

D. **C/CK Casing-ready No backbend Frames:** Provide frames with no backbends to accept custom architectural (wood) trim

1. Provide in either 14 gauge or 16 gauge galvannealed steel.

2. Provide a (CK) knock-down version with compression anchors and a (C) welded version with a variety of weld-in jamb anchor choices and no compression anchors.

3. Frames shall incorporate face anchor holes max 16" apart O.C., ½" from bottom and ½" from corners.

4. Corners shall be die mitered. (CK) knock-down corners shall be formed with tabs in the head and slots in the jambs for correct compression anchor function.
5. Face corners where head and jamb meet shall have sharp points broken to promote safety in handling.
6. Installation instructions shall be provided upon request.
7. **Fire Rated frames**: Provide knock-down and welded frames bearing Labels for fire ratings up to 90 minutes.

**E. Thermal Break Frames**: Provide true thermally-broken hollow metal frames in accordance with ASTM C1363.

1. Provide in either 14 gauge or 16 gauge galvannealed steel.
   a. Door and non-door side of frame shall not be bridged by thermally conductive materials, including steel anchors, reinforcements, hardware, or concrete (no grouted frames).
   b. Jamb and Head components shall be factory assembled, with 3-sided frames supplied KD or Factory welded.
   c. Use with thermal break threshold for external openings.

**F. Prepare all frames to receive inserted type door silencers (3) per strike jamb on single doors, and (2) per head for pair of doors. Stick on silencers are not permitted.**

**G. Frame Hardware Reinforcements:**
1. Mortise hinge reinforcement: minimum 7 gauge [0.180" (4.7 mm)].
   a. Provide high frequency hinge reinforcement for top hinge on all exterior, cross corridor, and stairwell frames, in accordance with SDI 111-H, Example “A” Application, where full mortise hinges are specified.
   b. **Strike reinforcem**ents: minimum 16 gauge [0.053" (1.3 mm)] and prepared for an ANSI-A115.1-2 strike.
   c. **Closer reinforcement**: minimum 14 gauge [0.067" (1.7 mm)] steel.
   d. Projection weld hinge and strike reinforcements to the door frame.
   e. Provide metal plaster guards for all mortised cutouts.
   f. Provide adequate reinforcements for other hardware as required.
   g. Include galvanized hardware reinforcements in all galvannealed frames.

**H. Electrical Requirements:**
1. **General**: Coordination all electrical requirements for doors and frames. Make provisions for installation of electrical items arranged so that wiring can be readily removed and replaced.
   a. Provide cutouts and reinforcements required for metal door frame to accept electric components.
   b. Frame with Electrical Hinges: Weld UL listed grout guard cover box welded over center hinge reinforcing. Top or bottom hinge locations are not permitted. Contractor to reference 3.01.D, for continuous hinges.
   c. Provide cutouts and reinforcements required to accept security system components.
   d. Refer to 08710 for electrified hardware items.

**Spec Writer’s Note**: Insert paragraph #2 when applicable monitoring switch may be required.

2. Provide mortar box, welded in head of door frame at exterior frames for future door contact switch provided by owner. Size, type, location and conduit requirements to be provided by owner.

**2.03 Construction of architectural stick components**

**A. Fabricate architectural stick frame assemblies from standard frame components, fabricated from 14 gauge galvanized steel A60 for exterior, and 16 gauge cold rolled steel for interior.**

**B. Construct architectural stick frame assemblies of standard frame components, fabricated as specified.**

**Spec Writer’s Note**: Choose one of the appropriate steel thickness and type.

1. **Exterior Frames**: Hot-dip galvannealed steel, ASTM A 653, Class A60, 16 gauge [0.053" (1.3 mm)] or 14 gauge [0.067" (1.7 mm)] hot dipped galvannealed steel, with closed tops.
   a. Include galvannealed components and internal reinforcements with all galvannealed frames.

2. **Interior Frames in Masonry**: 16 gauge [0.053" (1.3 mm)] cold rolled or galvannealed steel.
   a. Include galvannealed components and internal reinforcements with all galvannealed frames.

**C. Frame component requirements:**

1. Prepare required sticks at door openings and frame assemblies for hardware as specified.
2. Fabricate frame assemblies from three basic components:
   a. Open Sections (perimeter members) identical in configuration to standard frames
   b. Closed sections (intermediate members) with identical jamb depth, face dimensions, and stops as open sections.
   c. Sill sections: Fabricated from galvanized steel, flush with both faces of adjacent vertical members. Cut individual components to length and notched to assure square joints and corners.
3. Welded and ground smooth joints and corners of the frame assembly at the intersecting faces of the sections. Externally welded face joints at meeting mullions or between mullions and other frame members on the face surfaces only.

4. Ship frame assemblies to the jobsite completely welded. Field joints will be permitted only with the size of the total assembly exceeding shipping limitations.

5. Field splice joins will be permitted when the fabricated frame assemblies if large openings are subject to shipping limitations. Oversized frames will be fabricated in sections designated for splicing in the field. Frames to be provided with joint reinforcements 14 gauge, 8" long. Field weld joint reinforcement inside and tack weld outside joint at both faces, grind, and finish smooth and uniform in appearance, after installation.

6. Pierced and dimpled glazing beads for use with manufacturers’ standard fasteners.

7. Provide necessary anchors for jambs, heads, and sills of assemblies.
   a. Verification of field dimensions as required. Frame fabrication will not begin until these dimensions have been verified, submitted, and approved.

2.04 Fabrication
A. Face Welded Frames:
   1. Continuous face weld the joint between the head and jamb faces along their length either internally or externally. Grind, prime paint, and finish smooth face joints with no visible face seams.
   2. Externally weld, grind, prime paint, and finish smooth face joints at meeting mullions or between mullions and other frame members as per ANSI/SDI A250.8 – 2003.
   3. Provide two temporary steel spreaders (welded to the jambs at each rabbet of door openings) on welded frames during shipment. Remove temporary steel spreaders prior to installation of the frame.

2.05 Finish
A. Doors, frames and frame components are required to be cleaned, phosphatized, and finished with one coat of baked-on rust inhibiting prime paint in accordance with the ANSI/SDI A250.10 "Test Procedures and Acceptance Criteria for Prime Painted Steel Surfaces for Steel Doors and Frames."

Part 3: Execution
3.1 Examination
3.01 Installation
A. Install doors and frames in accordance with Steel Door Institute’s recommended erection instructions for steel frames ANSI A250.11.
B. Install label doors and frames in accordance with NFPA-80.
C. Remove temporary steel spreaders prior to installation of frames.
D. Set frames accurately in position; plumb, align and brace until permanent anchors are set. After wall construction is complete, remove temporary wood spreaders.
   1. Field splice only at approved locations indicated on the shop drawings. Weld, grind, and finish as required to conceal evidence of splicing on exposed faces.
E. Provide full height 3⁄8" to 1 ½" strip of polystyrene insulation at frames requiring grouting where continuous hinges are specified. Apply the strip to the back of the frame, where the hinge is to be installed, to allow for field drilling or tapping.
F. Where grouting is required in masonry, provide and install temporary bottom and intermediate wood spreaders to maintain proper width and avoid bowing or deforming of frame members. Refer to ANSI A250.11-2012, Standard.
   1. Hollow Metal Frames to receive grouting comply with ANSI/SDI Standard A250.8.2003, 4.2.2, whereby grout will be mixed to provide a 4" maximum slump consistency and hand troweled into place. Do not use grout mixed to a thinner, pumpable consistency is not recommended and not be used. Refer to HMMA 820 TN01-03 Grouting Hollow Metal Frames
G. Provide a vertical wood brace during grouting of frame at openings over 4’0" wider, to prevent sagging of frame header.
H. Apply hardware in accordance with hardware manufacturers’ instructions and Section 08710 FINISH HARDWARE of these Specifications. Install all hardware with only factory provided fasteners. Adjust door installation to provide uniform clearance at head and jambs, to achieve maximum operational effectiveness and appearance.

3.02 Adjusting
A. Final Adjustments: Adjust operating doors and hardware items just prior to final inspection and acceptance by the Owner and Architect. Leave work in complete and proper operating condition. Remove and replace defective work, including doors or frames that are damaged, bowed or otherwise unacceptable.
B. Prime Coat Touch-Up: Immediately after erection, sand smooth any rusted or damaged areas of prime coat, and apply touch-up of compatible air-drying primer.

3.03 Protection
A. Provide protective measures required throughout the construction period to ensure that door and frame units will be without damage or deterioration, other than normal weathering, at time of acceptance.
SDI selection and usage guide

Steelcraft product selection and usage guides have been compiled as tools for preparing architectural specifications for Hollow Metal doors, frames and stick systems.

The tables that follow show recommended Steelcraft doors and frames for a variety of entry locations and wall construction. Locate the entry way or wall requirements on the tables, then find the doors and frames most suitable to the application. Please refer to the appropriate catalogue section for detailed information about each door and frame.

This table is based on ANSI A250.8-2017 (SDI 100). Recommended Specification for Standard Steel Doors and Frames.
### Door construction and design

The following tables show recommended Steelcraft doors for a variety of entry locations. Simply locate the entry way requirements on the tables that follow, then find the doors most suitable for the specified usage. Please refer to the codes listed at right for a description of Door Construction Level and Door Design Nomenclature.

1. **Door Construction Level:**
   - 1 = Light Commercial 20 F Series (0.032" (0.8 mm))
   - 2 = Heavy Duty 18 F Series (0.042" (1.0 mm))
   - 3 = Extra Heavy Duty 16 F Series (0.053" (1.3 mm))
   - 4 = Maximum Duty 14 F Series (0.067" (1.7 mm))

2. **Door Design Nomenclature:**
   - F = Flush
   - G = Half Glass
   - V = Vision Light
   - FG = Full Glass
   - N = Narrow Lit

3. **Recommended Fire Ratings** are based on nationally published ratings. The local Authority Having Jurisdiction must be suited with, to insure compliance with local building codes.

4. **3 Hour Fire Door Assemblies** are limited to use in locations separating two buildings. Depending on the size of any building covered in this selection guide, a 3 hour door may be required.

5. **Temperature Rise Ratings** may be required on stair tower doors. Consult the AHJ.

### Cores

7. **Honeycomb:** 1” (25.4 mm) Kraft honeycomb core is laminated to both face sheets with contact adhesive. The honeycomb is phenolic resin impregnated with edges sanded to ensure ultimate lamination and performance. To further enhance the structural ability of the door, the honeycomb core material is subjected to several unique operations prior to assembly. If any of these operations are eliminated, the strength and durability of the door is compromised.

8. **Polystyrene:** for exterior applications in extreme weather conditions.

9. **Polyurethane:** for exterior applications in arctic weather conditions. This core is not available Fire Rated.

10. **Steel Stiffened:** 20 gauge [0.032” (0.8 mm)] hat shaped steel stiffeners are welded to the inside face sheets as internal reinforcement. The stiffeners are located a maximum of 6” (152.4 mm) on center and are welded to the face sheet on 4” (101.6 mm) centers. The areas between the stiffeners are filled with fiberglass insulation.

11. **Mineral Fiber:** The mineral fiber core material is laminated to both face sheets with contact adhesive. This core provides a 250°F (121°C) Temperature Rise rating or 450°F (232°C) depending on hardware application. See Fire Rated products section for additional information.

2. Frames can also be used in wall conditions other than those shown above.
3. Frames for these walls can be KD (knock-down) or SUA (set-up and welded).
Green buildings construction: LEED certification

LEED program compliance: U.S. Green building council LEED-NC rating system version 2.2 Statement

Recycled content
MR Credit 4.1: Recycled content: 10% (post-consumer + ½ pre-consumer) 1 Point.

Intent: increase demand for building products that incorporate recycled content materials, thereby reducing impacts resulting from extraction and processing of virgin materials.

Requirements: use materials with recycled content such that the sum of post-consumer recycled content plus one-half of the pre-consumer content constitutes at least 10% (based on cost) of the total value of the materials in the project. The recycled content value of a material assembly shall be determined by weight. The recycled fraction of the assembly is then multiplied by the cost of assembly to determine the recycled content value.

* Recycled content shall be defined in accordance with the international organization of standards document, ISO 14021—environmental labels and declarations—self-declared environmental claims (type ii environmental labeling).

Post-consumer material is defined as waste material generated by households or by commercial, industrial and institutional facilities in their role as end-users of the product, which can no longer be used for its intended purpose.

Pre-consumer material is defined as material diverted from the waste stream during the manufacturing process. Excluded is reutilization of materials such as rework, regrind or scrap generated in a process and capable of being reclaimed within the same process that generated it.

MR Credit 4.2: Recycled content: 20% (post-consumer + ½ pre-consumer). 1 Point in addition to MR Credit 4.1.

Requirements: use materials with recycled content such that the sum of post-consumer recycled content plus one-half of the pre-consumer content constitutes an additional 10% beyond MR Credit 4.1 (Total of 20%, based on cost) of the total value of the materials in the project.

Note: For our LEED brochure, go to http://us.allegion.com, search “LEED” to find current Recycle Content and Regional Material for LEED program compliance.

U.S. Green building council: LEED-NC rating system version 2.2 Statement

Regional material
MR Credit 5.1: Regional materials: 10% extracted, processed, and manufactured regionally 1 Point.

Intent: increase demand for building materials and products that are extracted and manufactured within the region, thereby supporting the use of indigenous resources and reducing the environmental impacts resulting from transportation.

Requirements: use building materials or products that have been extracted, harvested or recovered, as well as manufactured, within 500 miles of the project site for a minimum of 10% (based on cost) of the total materials value. If only a fraction of a product or material is extracted/harvested/recovered and manufactured locally, then only that percentage (by weight) shall contribute to the regional value.

MR Credit 5.2: Regional materials: 20% extracted, processed & manufactured regionally. 1 Point in addition to MR Credit 5.1.

Intent: increase demand for building materials and products that are extracted and manufactured within the region, thereby supporting the use of indigenous resources and reducing the environmental impacts resulting from transportation.

Requirements: use building materials or products that have been extracted, harvested or recovered, as well as manufactured, within 500 miles of the project site for an additional 10% beyond MR Credit 5.1 (Total of 20%, based on cost) of the total materials value. If only a fraction of the material is extracted/harvested/recovered and manufactured locally, then only that percentage (by weight) shall contribute to the regional value.

Information found in our LEED brochure outlines the Allegion brands and products that may support MR Credit 5.1 and MR Credit 5.2 depending on the location of the specific project being certified.

Note: For our LEED brochure, go to http://us.allegion.com, search “LEED” to find current Recycle Content and Regional Material for LEED program compliance.

About Allegion™

Allegion (NYSE: ALLE) is a global pioneer in safety and security, with leading brands like CISA®, Interflex®, LCN®, Schlage® and Von Duprin®. Focusing on security around the door and adjacent areas, Allegion produces a range of solutions for homes, businesses, schools and other institutions. Allegion is a $2 billion company, with products sold in almost 130 countries.

For more, visit www.allegion.com.
